HULTAFORS GROUP

Chemical Requirements - Restricted Substance List Supplier Commitment

1. INTRODUCTION

Hultafors Group AB and its subsidiary companies (collectively "Hultafors Group") supply workwear, footwear, head protection, hand tools, ladders and work lights for professional users. The products are developed, manufactured, and marketed as their own brands. The requirements in this document are valid for Hultafors Group legal entities.

The Restricted Substances List (RSL) is developed to provide suppliers to any Hultafors Group AB entity with information on how to perform regarding the chemical content in or for any product produced for Hultafors Group.

The requirements and information build on the Chemicals guidance of the Swedish Chemicals Group at RISE.

2. PURPOSE

There are many local, national, and international laws and regulations that dictate how retailers, brands and producers should manage chemicals used in processing and in final products, these laws are constantly changing as new chemicals are developed and/or new research is available, therefore high awareness regarding chemicals is essential. Our requirements reflect an awareness of how chemicals affect human health and the environment and constantly increasing quality demands of consumers.

Every retailer, brand and producer need a reliable tracking system for these regulations and a clear internal chemical management program for how these regulations should be followed.

The purpose of this Group-wide Restricted Substance List is to ensure chemical compliance of all products produced by or in the name of Hultafors Group. Our aim is to refrain from using any hazardous chemicals that pose a threat to human health or the environment. Additionally, we strive to minimize any adverse effects throughout the entire supply chain of our products.

3. SCOPE OF APPLICATION

The Restricted Chemical List has been created to establish non-negotiable requirements applicable to the entire supply chain of a Hultafors Group product – e.g. self-owned factories, suppliers, subcontractors, and sub-suppliers (onward referred to as "Supplier" in this document).

It is the responsibility of the Supplier to inform and secure compliance to this Restricted Substances List with all involved parties in the supply chain that Hultafors Group do not have direct contact with.

HULTAFORS GROUP

Chemical Requirements - Restricted Substance List Supplier Commitment

4. CHEMICAL REQUIREMENTS – EU LEGISLATION

Below are current EU/EEA regulations with a certain focus on hazardous chemicals, they form the overall legal framework in EU/EEA and applies to all articles produced for Hultafors Group. Any chemical forbidden in these regulations shall not be used for any article produced for Hultafors Group:

- REACH regulation (Regulation (EU) 1907/2006) and related amendments
- POPs regulation (Regulation (EU) 2019/2021) and related amendments
- Biocidal Product regulation, BPR (Regulation (EU) 528/2012) and related amendments
- Packaging directive (Directive 94/62/EC) and related amendments
- RoHs Directive (2011/65/EU) and related amendments
- Batteries regulation (Regulation (EU) 2023/1542) and related amendments
- Waste Framework Directive (Directive 2008/98/EC) and related amendments

4.1 Substances restricted in REACH Annex XVII

Annex XVII to REACH (Regulation (EU) 1907/2006) contain restrictions for hazardous substances in articles in EU. The Supplier is responsible that no products delivered to Hultafors Group contain any chemical which use is limited/restricted according to Annex XVII.

This includes any component of the product supplied by any local Supplier or subcontractor.

Link to legislation: <https://echa.europa.eu/substances-restricted-under-reach>

4.2 SVHC substances on the REACH Candidate list

All European Suppliers are liable according to law to inform Hultafors Group about the presence of chemicals in a product that are listed in the Candidate List of Substances of Very High Concern (SVHC) for Authorization (REACH Regulation (EU) 1907/2006).

All Suppliers of Hultafors Group products containing a substance that appears on the Candidate List in a concentration above 0.1 % weight by weight (w/w) shall inform Hultafors Group about the same without delay.

We strongly recommend all Suppliers not to use any chemical listed on Candidate List as the likeliness that they will be subject for restriction in the future is high, which means Hultafors Group consequently will follow with chemical demands across the supply chain. Hultafors Group ask of our Suppliers to rather stay proactive and use a better available chemical.

Above includes any component of the product supplied by any local Supplier or subcontractor.

Link to legislation: <https://echa.europa.eu/web/guest/candidate-list-table>

HULTAFORS GROUP

Chemical Requirements - Restricted Substance List Supplier Commitment

4.3 Registration of SVHC substances in the SCIP database

According to the Waste Framework Directive (Directive 2008/98/EC) articles placed on the EU market must be notified in the SCIP Database if they contain substances of very high concern (SVHCs) on the Candidate List at a concentration above 0.1% by weight.

All European Suppliers are obliged to do their SCIP notification and to provide Hultafors Group with the necessary information for doing the same. Suppliers outside EU are obliged to provide Hultafors Group with the detailed necessary information to perform the SCIP notification.

Link to legislation: <https://echa.europa.eu/scip>

4.4 REACH authorized use of hazardous substances in EU

Substances that can only be used with an authorization in EU are listed in Annex XIV to REACH (Regulation (EU) 1907/2006). We strongly recommend all Suppliers not to use any chemicals listed in Annex XIV, as the likeliness that they will be subject for restriction in the future is high. Hultafors Group ask of our Suppliers to rather stay proactive and use a better available chemical.

Above includes any component of the product supplied by any sub-supplier or subcontractor.

Link to legislation: <https://echa.europa.eu/authorisation-list>

4.5 Regulation on Persistent Organic Pollutants (POPs)

The Stockholm convention on Persistent Organic Pollutants is an international environmental treaty that aims to eliminate or restrict the production and use of persistent organic pollutants (POPs). It is implemented in EU law by the POPs regulation, (EU) 2019/1021. The POPs regulation includes restrictions on certain substances in articles.

The Supplier is responsible that all products delivered to Hultafors Group do not contain any substance limited/restricted in the POPs regulation.

This includes any component of the product supplied by any sub-supplier or subcontractor.

Link to legislation: <https://echa.europa.eu/list-of-substances-subject-to-pops-regulation>

4.6 Biocidal Product Regulation

The Biocidal Product Regulation (BPR Regulation (EU) 528/2012) concerns the placing on the market and use of biocidal products which are used to protect humans, animals, materials, or articles against harmful organisms (like pests or bacteria) by the action of the active substance in the biocidal product. The BPR regulation aims to improve the functioning of the biocidal products market in the European Union, while ensuring a high level of protection for humans and the environment. The Biocidal Product Regulation (BPR) also sets rules for the use of articles treated with or intentionally

HULTAFORS GROUP

Chemical Requirements - Restricted Substance List Supplier Commitment

incorporating, one or more biocidal products. Only substances that are approved by BPR are allowed to be used as biocides in articles in the EU. The substance must be approved for the relevant use category (product type). When textile and plastic have been treated outside EU the product type is most commonly PT 9.

All European Suppliers are liable according to BPR to inform Hultafors Group about what biocides have been used to treat a material or product. Non-European Suppliers are obliged to do the same so that Hultafors Group can fulfil the same duty towards its customers.

Hultafors Group wish to reduce the use of biocidal products, why they should only be used only when in agreement with respective brand within Hultafors Group.

Above includes any component of the product supplied by any sub-supplier or subcontractor.

Link to legislation: <https://echa.europa.eu/information-on-chemicals/biocidal-active-substances>

4.7 Directive concerning packaging material (94/62/EC)

The purpose of this European Union Directive is to manage the concerns of packaging and packaging waste. The directive includes demands on weight and volume of packaging, content of hazardous substances and materials in the packaging material and its components and the design of reusable or recoverable packaging, all to reduce its impact on the environment. Suppliers to Hultafors Group need to comply to demands set in this directive.

Link to legislation: <http://ec.europa.eu/environment/waste/packaging/legis.htm>

4.8 RoHS Directive (2011/65/EC) and related amendments

The purpose of this directive is to minimize risk for human health and environment by restricting hazardous substances, or substituting them with safer alternatives, in electrical and electronic equipment (EEE). The directive also sets standards regarding promoting the collection and recycling of such equipment. It concerns all products dependent on electric currents or electromagnetic fields to fulfil at least one intended function. Substances restricted in RoHS include certain softeners for plastic, heavy metals, and flame retardant.

The RoHS Directive (2011/65/EC) is a CE marking directive and there is a standard (EN IEC 63000) to support the compliance assessment of the RoHS Directive. The standard includes assessment of the content of restricted substances in EEE.

There are time limited exemptions in RoHS where restricted chemicals may be used in specific processes, functions, or products.

The Supplier is responsible that no products delivered to Hultafors Group contain any prohibited content of substances restricted by RoHS. The Supplier is obliged to inform Hultafors Group about

HULTAFORS GROUP

Chemical Requirements - Restricted Substance List Supplier Commitment

any use of time limited exemptions to RoHS. Note that even if there is an exemption for a substance in RoHS, the information duty in REACH (4.2 and 4.3 above) still applies if the substance is a SVHC.

This includes any component of the product supplied by any sub-supplier or subcontractor.

Link to legislation: https://environment.ec.europa.eu/topics/waste-and-recycling/rohs-directive_en

4.9 Regulation on batteries and products containing batteries

The purpose of the Batteries Regulation (Regulation (EU) 2023/1542) is to ensure that batteries in the future, have a low carbon footprint, use minimal harmful substances, need less raw materials from non-EU countries, and are collected, reused, and recycled to a high degree in Europe. Restricted hazardous substances are listed in Annex I to the regulation. In addition to the restrictions, there is an information requirement for hazardous substances in batteries (part of a battery passport) and requirements on marking. Suppliers to Hultafors Group need to comply with demands set in this directive.

Link to legislation: <https://echa.europa.eu/understanding-batteries-regulation>

5. ADDITIONAL CHEMICAL REQUIREMENTS AND GUIDING DOCUMENTS

5.1 Additional chemical requirements for Textile, Leather and Shoes

In Appendix I to this document, you can find the Chemicals Guidance for textile and leather of the Swedish Chemicals Group at RISE. The appendix contains requirements that are stricter compared to the legislation both in limit values and in scope (broader groups of substances are restricted). Suppliers to Hultafors Group are obliged to follow these stricter requirements.

The Chemicals Guidance for textiles and leather provides guidance to Hultafors Group and Suppliers by including only substances that are relevant in textile, leather, accessories and packaging material, i.e. Hultafors Group textile and shoe products. Chapter 4 of this Restricted Substance List references legislation that encompasses a broader range of substances, with many of them being irrelevant to the materials in Hultafors Group products. The Chemicals Guidance also includes consolidated information of the EU chemicals legislation for each substance or substance group.

The Chemicals guidance includes information about how Personal Protective Equipment (PPE) is derogated in some REACH restrictions. Hultafors Group does not support any use of these derogations. The Supplier is obliged to follow the strict limits set in the Chemicals guide also for PPE.

When a Supplier has the choice between two chemicals that serves the same purpose, the Supplier shall always choose the chemical that is least harmful to the environment.

This guide is updated twice a year. Please, ensure you refer to the latest version.

It is available in Chinese, Vietnamese, Bengali and Turkish upon request.

HULTAFORS GROUP

Chemical Requirements - Restricted Substance List Supplier Commitment

This includes any component of the product supplied by any sub-supplier or subcontractor.

5.2 Additional chemical requirements for electronics and other material categories

In Appendix II to this document you can find the Chemicals Guidance for electrical and electronic products of the Swedish Chemicals Group at RISE. The appendix contains requirements that are stricter compared to the legislation both in limit values and in scope (broader groups of substances are restricted). Suppliers to Hultafors Group are obliged to follow these stricter requirements.

The Chemicals Guidance for electrical and electronic process (EEE) provides guidance to Hultafors Group and Suppliers by including only substances that are relevant in electric and electronical materials and packaging material. Chapter 4 of this document references legislation that encompasses a broader range of substances, with many of them being irrelevant to the materials in Hultafors Group products. The Chemicals Guidance also includes consolidated information of the EU chemicals legislation for each substance or substance group.

When a Supplier has the choice between two chemicals that serves the same purpose Suppliers shall always choose the chemical that is least harmful to the environment.

This guide is updated twice a year. Please, ensure you refer to the latest version.
It is available in Chinese upon request.

This includes any component of the product supplied by any sub-supplier or subcontractor.

5.3 Additional chemical requirements for packaging made of cardboard, paper, plastics and rubber

In Appendix III you can find the Chemical guidance for packaging materials of the Swedish Chemicals Group at RISE regarding substances that are regulated in EU legislation and that is used in packaging made of cardboard, paper, plastic, and rubber. The Chemical Guidance is included in order to facilitate for Hultafors Group Suppliers to comply with the chemical legislation and recommendations in force in the fields of packaging material. More detailed information about chemicals in packaging can be found in the Chemicals guidance's referred to in 0 and 0 above.

When a Supplier has the choice between two chemicals that serves the same purpose, the Supplier shall always choose the chemical that is least harmful to the environment.

The Chemical guidance for packaging materials for packaging is updated at most twice a year. Please, ensure you refer to the latest version.

This includes any component of the product supplied by any sub-supplier or subcontractor.

HULTAFORS GROUP

Chemical Requirements - Restricted Substance List Supplier Commitment

5.4 Additional chemical requirements for tender business

In tender business a few additional chemicals are to be avoided apart from the ones restricted by law – these additional substances can be found in Appendix IV. It is required that Suppliers do not use any of the substances mentioned in Appendix IV for any article produced for Hultafors Group. In case any of the mentioned chemicals are needed and not possible to be substituted the Supplier shall notify Hultafors Group and ask for permission to use the chemical before production starts.

This includes any component of the product supplied by any sub-supplier or subcontractor.

5.5 Additional requirements for chemical products and internal chemicals management

All Suppliers in the Hultafors Group supply chain, regardless of if they are producers, importers or distributors need to co-operate to make sure that their internal chemical management and (if applicable) chemical products comply with the CLP regulation. CLP is an EU/EEA regulation and is based on the Globally Harmonized System of Classification and Labelling of Chemicals (GHS).

Link to legislation: <https://echa.europa.eu/information-on-chemicals/cl-inventory-database>

6. DUTIES AND RESPONSIBILITIES

Hultafors Group assumes responsibility regarding legal compliance of all products produced in our name towards legislators and our customers. This can only be done if all our direct and indirect Suppliers have been working in compliance with legal and self-imposed rules and observed our defined requirements in this Restricted Substance List. Therefore, violation and ignorance of the requirements in this document can result in damage, claims and compensation for loss of sales. In case a Supplier - directly or indirectly — becomes aware of a violation of the requirements outlined in this document Hultafors Group is to be informed immediately, latest within 24 hours.

7. SANCTIONS

In case tests, on-site visits, random tests on readymade production, controls or audits performed by Hultafors Group or a 3rd party show forbidden or too high concentrations of restricted chemicals according to Hultafors Group Restricted Substance List we reserve the right to hold payment until the delivered goods have been corrected, removed or taken back by the Supplier and goods fulfilling our specifications has been approved and delivered.

In case a violation related to any of the above stated elements of the Restricted Substance List occurs, the Supplier agrees to hold Hultafors Group harmless from any direct and/or reasonable indirect damages, loss, liability arising out of or resulting from a violation of the requirements as described in this document.

8. COMPLIANCE COMMITMENT WITH HULTAFORS GROUP RESTRICTED SUBSTANCE LIST

By signing this document, the Supplier acknowledge that all articles delivered by the Supplier to Hultafors Group are produced in compliance with this Chemical Guideline and Restricted Substance List.

HULTAFORS GROUP

Chemical Requirements - Restricted Substance List Supplier Commitment

Furthermore, by signing this document the Supplier commits to:

- a. Communicate the Hultafors Restricted Substance List to all of its subcontractors as well as local accessory and chemical Suppliers used in the supply chain of a Hultafors Group product and to ensure that they are in compliance with Hultafors Group Restricted Substance List.
- b. At own cost conduct relevant labtests to verify compliance with the Hultafors Restricted Substance List, and upon request send the labtest report to Hultafors Group. Labtests must be made with accredited laboratories and it is the Suppliers responsibility to make sure the lab is accredited for the test concerned – see Appendix V
- c. Assure that relevant verification documents are available to verify compliance to the requirements in the Hultafors Group Restricted Substance List, from the Supplier and all its subcontractors, and upon request submit these documents to Hultafors Group
- d. Stay continuously updated with the latest version of the EU harmonized legislations referred to in this Restricted Substance List
- e. Stay updated with the latest version of Hultafors Groups Restricted Substance List and it's appendixes.

9. LIST OF APPENDICIES

Added appendix: Chemical guidance for packaging materials	2024-01-20	Kristina Altner Group Sustainability Manager, Maria Schartau Sustainability Manager SGS, Malin Hake Group Quality Manager

January 2024

Main changes in the Textile Chemicals Guidance

The Synthetic polymer microparticles restriction, entry 78 in REACH have been added under its own heading, under MISCELLANEOUS part.

The following SVHC from January 2024 have been added:

- UV-326 and UV-329 are added under heading “UV stabilizers”.

Some information is added (for clarification) and some deleted (information available in other place) in the table “Relationship between units used in the guide”.

Bisphenol S is listed in California Proposition 65, thus added under heading “Bisphenols”.

The expression “CMR fast track” is deleted (the working name for the restriction that became entry 72 in REACH).

Specific information about uses of chlorinated solvent in leather and wool is added under heading “Solvents- chlorinated organic solvents”.

Restriction entry references have been added to table under heading “Solvents- chlorinated organic solvents”.

The long chemical IUPAC names in footnote under “Tin organic substances” are deleted.

Deleted - formaldehyde limit of "300 mg/kg for all other textiles and leather goods" and footnote regarding the transition period for formaldehyde in jackets etc under heading “Formaldehyde”.

Diisooctyl phthalate (DIOP), 27554-26-3 have been added to appendix “Phthalates” since it is added to AGECE legislation.

LOQ for phthalates have been set to 50 mg/kg.

The following standards have been added/updated:

- ISO 19050 (Rubber standard for total content of heavy metals method)
- ISO 1811:2023 nickel standard has been revised and the connecting A1 standard is deleted.
- EN 16128:2015 (nickel in frames and glasses)

Minor clarifications, information of “usage”, and language corrections have been done to improve understandability.

January 2024

Main changes in the EEE Chemicals Guidance

The Synthetic polymer microparticles restriction, entry 78 in REACH have been added under its own heading, under MISCELLANEOUS part.

The following SVHC from January 2024 have been added:

- UV-326 and UV-329 are added under heading “UV stabilizers”.

A new heading Photo-initiators is added, including the following SVHC:

- Diphenyl(2,4,6-trimethylbenzoyl) phosphine oxide (TPO): 75980-60-8
- 2-(dimethylamino)-2-[(4-methylphenyl) methyl]-1-[4-(morpholin-4-yl)phenyl]butan-1-one, Irgacure 379: 119344-86-4
- 2-benzyl-2-dimethylamino-4'-morpholinobutyrophenone, Irgacure 369: 119313-12-1

Some information is added (for clarification) “Relationship between units used in the guide”.

Bisphenol S is now listed in California Proposition 65, thus added under heading “Bisphenols”.

The long chemical IUPAC names in footnote under “Tin organic substances” is deleted.

LOQ for phthalates have been set to 50 mg/kg.

Appendix 6 -PAH has been more aligned with Textile chemical Guidance

The following standards have been added/updated:

- EC 62321-11 (determination of tris(2-chloroethyl) phosphate (TCEP) in plastics)
- ISO 1811:2023 nickel standard has been revised and the connecting A1 standard is deleted.
- IEC 62321-3-2 (Screening – Fluorine by combustion-ion chromatography (C-IC))

Minor clarifications, information of “usage”, and language corrections have been done to improve understandability.

PREFACE

This guide is developed for the members of the Swedish Chemicals Group to facilitate for importing companies to comply with national and EU chemical legislation and recommendations in the fields of textiles, clothes, leather goods, shoes and packaging material.

Many chemicals used throughout the textile manufacturing chain can be harmful for the environment, factory workers and consumers. Therefore, an increasing number of chemicals are being restricted and all importers and distributors are responsible for the articles they put on the EU market.

This guide has been put together by a team of experts at RISE and is updated twice per year. The guide covers EU regulated chemical substances affecting textile and leather products as well as national legislation in Europe. In addition, some restrictions from other countries have been added.

The distinguishing properties of the chemicals of concern and the processes in which they are used are described in the guide. Stipulated test equipment for analysis of restricted substances in products is given when available.

The guide is provided in several languages that can all be accessed through the Chemicals group's website. To facilitate communication, the contents on each page are identical in each linguistic version. The English version of this guide is preferential for interpretation.

EXPLANATORY SECTION

Word list

Required limit value:	Limit value as agreed in business sector and or by legal requirements. Note that limit value is measured in products. Weight percent shall be calculated from the weight of the whole product if nothing else is stated.
CAS RN:	Chemical abstract services registration number. CAS RN are given for specific defined substances.
Properties:	Human toxicological and Eco toxicological properties.
Use:	Identified uses on the market.
Comments:	Information on known alternatives and recommendations on how to avoid unwanted chemicals.
Detection limit:	Limit of detection (LOD). Lowest concentration the test equipment is able to detect. This can vary between different test laboratories. Note that detection limit is not relevant as required limit values for all substances as the background concentrations can be notably higher.
Legal background:	Current legal EU and national European frameworks and requirements.
Candidate list:	Substances listed on Candidate List of Substances of Very High Concern for authorization of the Regulation (EC) No 1907/2006 (REACH) are referred to as SVHC. These substances are covered by an information duty if the concentration is 0.1 weight-% (1000 mg/kg) or above in an article. Candidate list substances are also included in the French AGECL legislation (Décret n° 2022-748) implying additional information requirements (same concentration limit).
MADL:	Maximum Allowable Dose Levels. Safe harbor levels for chemicals causing reproductive toxicity in Proposition 65 in California.
NSRL:	No Significant Risk Levels. Safe harbor levels for cancer-causing chemicals in Proposition 65 in California.
Quantification limit:	Limit of quantification (LOQ). The smallest concentration of an analyte that can be reliably measured by an analytical procedure.
Test method:	Standardized test method if such exists. ISO/EN standards are prioritized over national or commercial standards. Test equipment if no standardized test method exists. Abbreviations of recommended test equipment are explained below. All substances in a chemical group may not be legally regulated, but still included as a chemical group in this guide. As it can distinguish between different laboratories which substances besides the legal restricted, they offer test for, this should be confirmed before ordering.

Word list

POP: Persistent Organic Pollutants (POPs) are organic chemical substances, which remain intact in the environment for exceptionally long periods of time.

Test equipment abbreviations

ANALYSIS OF ORGANIC COMPOUNDS

- Gas chromatography: GC
Detectors used together with GC:
 - MS: Mass selective detector: GC-MS
 - DAD: Diode array detector: GC-DAD
 - ECD: Electron capture detector: GC-ECD
- Liquid chromatography: LC
Note: Sometimes the abbreviation HPLC is used.
It stands for High Performance Liquid Chromatography.
Detectors used together with LC:
 - MS: Mass selective detector: LC-MS
 - DAD: Diode array detector: LC-DAD
 - ECD: Electron capture detector: LC-ECD

Relationship between units used in the guide

1000	mg/kg	equals	1000	ppm	(parts per million)
1000	mg/kg	equals	1 000 000	ppb	(parts per billion)
1000	mg/kg	equals	1 000 000	µg/kg	(microgram per kilogram)
1000	mg/kg	equals	0.1	%	(by weight)

Relationship between surface concentration and total concentration (relevant for PFAS restrictions for example)

Substance [µg/m²]	Surface weight [g/m²]		Substance [ppb = µg/kg]
1	40	equals	25
2.5	100	equals	25
5	200	equals	25
Substance [ppb = µg/kg]	Surface weight [g/m²]		Substance [µg/m²]
25	40	equals	1
25	100	equals	2.5
25	300	equals	7.5

Product and material categories concerned

All chemicals are not used in all materials. A general division into the categories listed below has therefore been made that may be applicable to several kinds of articles due to their material composition.

			
Textile Textile material, both natural and synthetic fibres	Leather Leather, both natural and leather imitation	Accessories Metal, plastics, rubber etc. used in e.g. buckles, buttons, jewellery and zippers.	Packaging Packaging material in accordance with the Packaging Directive 94/62/EC. Paper cardboard, plastic bags, tags, labels, plastic sleeves etc.

PROCESS CHEMICALS

Process chemicals are used in the manufacturing process of the textile and leather goods but have no function in the finished product. Remains of the process chemicals may however be found in the finished product and cause health or environmental problems.

Alkylphenol ethoxylates (APEO) and derivatives

The most common APEOs are Nonylphenol ethoxylates (NPEO) and Octylphenol ethoxylates (OPEO).

Required limit value:	Should not be used in processes. Occurrence in products below 100 mg/kg (0.01%) for total APEO is regarded as unintended residues (contaminants) which cannot be controlled.
CAS RN:	Various
Properties:	Irritating to skin. The metabolites affect the respiratory system, have endocrine disruptive effect (hormones) and are dangerous for the environment. Nonylphenol ethoxylates are rapidly degraded to 4-nonylphenol, which is even more dangerous for the environment. A similar environmental danger is the degradation of octylphenol ethoxylate into 4-octylphenol.
Use:	Dispersing and emulsifying agents in textile chemicals as well as impregnation agents in printing pastes. Occurs in leather lubricants. Manufacturing of coatings.
Comments:	Alternatives for NPEOs are readily available but must be evaluated. They include aliphatic alcohol ethoxylates, both linear and branched, and glucose-based carbohydrate derivatives such as alkyl-polyglucosides, glucamides, and glucamine oxides.

Legal background:

Legal limit: NPEOs shall not be placed on the market in textile articles in concentrations equal to or greater than 0.01 weight% of that textile article or of each part of the textile article. Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 46a.

0.1 weight% of NPEO as a substance or in mixtures with exceptions for textile and leather processing if certain methods are used.

Norway restricts manufacture, import, export, sale and use of octylphenol and octylphenol ethoxylates, and mixtures containing these substances, FOR 2004-06-01-922.

4-Nonylphenol, branched and linear (4-NP, various CAS RN), 4-Nonylphenol, branched and linear, ethoxylated (4-NPnEO, various CAS RN), 4-(1,1,3,3-tetramethylbutyl)phenol (4-tert-OP, CAS RN 140-66-9), 4-(1,1,3,3-tetramethylbutyl)phenol, ethoxylated (4-tert-OPnEO, UVCB substance, no CAS RN), 4-tert-butylphenol (CAS RN 98-54-4) and tris(4-nonylphenyl, branched and linear) phosphite (TNPP) with = 0.1% w/w of 4-nonylphenol, branched and linear (4-NP) (no CAS RN) are on the Candidate List (REACH).

In France: The substances on the Candidate list as well as 4-tert-pentylphenol (CAS RN 80-46-6), 4-heptylphenol, branched and linear (e.g. CAS RN 1987-50-4), and Reaction products of 1,3,4-thiadiazolidine-2,5-dithione, formaldehyde and 4-heptylphenol, trendy and linear (RP-HP) [with ≥ 0.1 % w/w 4-heptylphenol, branched and linear] are included under the AGECE legislation (LOI n° 2020-105).

4-NPnEO and 4-tert-OPnEO are also included in Annex XIV to REACH.

Test method:

ISO 18254 -1, -2 (textile), APEO
EN ISO 21084 (textile), AP
ISO 18218-1, -2 (leather)

LOQ: 10 mg/kg

Arsenic compounds

Required limit value:	Should not be present in products.
CAS RN:	Various
Properties:	May cause cancer. Toxic by inhalation and toxic if swallowed. Persistent, bioaccumulative and toxic.
Use:	Fining agent in glass, pigment in metal alloy, preservative.
Comments:	Apply arsenic free compounds.
Legal limit:	<p>Diarsenic Pentoxide; 1303-28-2 Diarsenic Trioxide; 1327-53-3 Triethyl arsenate; 15606-95-8 Arsenic acid; 7778-39-4 Calcium arsenate; 7778-44-1 are on the Candidate list (REACH).</p> <p>As wood preservatives regulated in Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 19 (limit level; no intentionally added content).</p> <p>Arsenic and its compounds have a restriction limit of 1 mg/kg (extractable content) in clothing, related accessories, textiles other than clothing in skin contact, or footwear according to Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 72. The restriction does not apply to clothing, related accessories, textiles other than clothing, or footwear within the scope of Regulation (EU) 2016/425 (PPE).</p> <p>In France: The substances on the Candidate List are included in the AGECE legislation (LOI n° 2020-105).</p> <p>In California: Inorganic arsenic compounds and inorganic arsenic oxides are listed in Proposition 65. Safe Harbor Limit for inorganic arsenic compounds: NSRL 0.06 µg/day (inhalation), 10 µg/day (except inhalation).</p>
Test method:	<p>EN 16711-1 (total content in textiles and accessories). EN 16711-2 (extractable content and accessories). ISO 19050 (rubber)</p> <p>LOQ: 0.1 mg/kg (extractable content)</p>

Bisphenols

Required limit value:	Should not be present in products.
CAS RN:	Bisphenol A; BPA (4,4'-isopropylidenediphenol): 80-05-7 2,2-bis(4'-hydroxyphenyl)-4-methylpentane: 6807-17-6 Bisphenol B; (4,4'-(1-methylpropylidene)bisphenol): 77-40-7 Bisphenol S; (4,4'-sulphonyldiphenol): 80-09-1
Properties:	Toxic for reproduction. Endocrine disrupting properties.
Use:	Mainly used in manufacture of polycarbonate epoxy resins and chemicals. Also as; hardener in epoxy resins and in thermal prints. May be used as catalyst and antioxidant for processing PVC. Different bisphenols occur as impurities in leather processing. Bisphenol B and F may occur as impurities or break down products from the process of polyamide dyeing to increase colour fastness.
Comments:	Left as residues in polycarbonate and epoxy. Can be found in products with material based on plastic and paper.
Legal background:	<p>BPA, Bisphenol B, Bisphenol S and 2,2-bis(4'-hydroxyphenyl)-4-methylpentane are listed on the Candidate list (REACH).</p> <p>Bisphenol A (BPA) content in thermal paper (0.02% by weight), is restricted from January 2020 according to Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 66.</p> <p>In France: The substances on the Candidate List are included in the AGECE legislation (LOI n° 2020-105).</p> <p>In California: BPA and BPS are listed in Proposition 65. Safe Harbor Limit for BPA: MADL 3 µg/day (dermal exposure from solid materials).</p>
Test method:	<p>ISO 11936 (leather)</p> <p>No standardised test method for textile available.</p> <p>Test equipment LC-MS, GC-MS.</p> <p>LOQ: 10 mg/kg</p>

C,C'-azodi(formamide) (ADCA)

Required limit value:	Should not be used in processes or present in products.
CAS RN:	123-77-3
Properties:	Allergenic (respiratory sensitizer).
Use:	Azodicarbonamide, or azodiformamide is mainly used as a chemical blowing agent in the rubber and plastics industry. Blowing agent in especially EVA and PVC.
Comments:	<p>Can leave residues of formamide in the material. ADCA may decompose into semicarbazide, a suspected carcinogen.</p> <p>Use physical blowing agents such as carbondioxide, hydrocarbons or nitrogen as alternative to chemical blowing agents when possible.</p>
Legal background:	<p>ADCA is listed on the Candidate list (REACH).</p> <p>In France: The substances on the Candidate list are included in the AGECE legislation (LOI n° 2020-105).</p>
Test method:	<p>No standardised test method available for textiles.</p> <p>Test equipment: GC-MS, LC-MS</p> <p>LOQ: 200 mg/kg</p>

Ethylenediamine (EDA)

Required limit value:	Should not be present in products.
CAS RN:	107-15-3
Properties:	Allergenic (respiratory and skin sensitizer).
Use:	Used in the production of many industrial chemicals. Used in the production of polyurethane fibres.
Legal background:	Ethylenediamine is listed on the Candidate list (REACH). In France: The substances on the Candidate list are included in the AGECE legislation (LOI n° 2020-105).
Test method:	No standardised test method available. Test equipment: LC-MS, GC-MS LOQ: 100 mg/kg

Ethylenethiourea

Required limit value:	Should not be present in products.
CAS RN:	Imidazolidine-2-thione (2-imidazoline-2-thiol) also called ethylenethiourea: 96-45-7
Properties:	Toxic for reproduction.
Use:	Used primarily as an accelerator for vulcanizing rubber.
Legal background:	<p>Ethylenethiourea is listed on the Candidate list (REACH).</p> <p>In France: The substances on the Candidate list are included in the AGEC legislation (LOI n° 2020-105).</p> <p>In California: Ethylenethiourea is listed in Proposition 65. Safe Harbor Limit: NSRL 20 µg/day.</p>
Test method:	<p>No standardised test method available.</p> <p>Test equipment: LC-MS LOQ: 20 mg/kg</p>

Formamide

Required limit value:	Should not be present in products.
CAS RN:	75-12-7
Properties:	Toxic for reproduction.
Use:	<p>Formamide is used as solvent for example in the production of synthetic leather and inks. Furthermore, formamide is used as a solvent and plasticizer in consumer products. It can be an ingredient as softener for paper, water soluble glues and wood stains. During processing of foam, formamide is formed as a by-product at higher temperatures. Especially tosylsemicarbazide and azodi-carbonamide (see headline ADCA above) are responsible for the presence of formamide in EVA-consumer products.</p>
Comments:	<p>For the application as solvent, formamide might be replaced by other solvents like dipropylene glycol.</p> <p>Potential alternatives as N,N-dimethylformamide, N-methylformamide or low molecular weight ethylene glycol ethers are not considered to be adequate substitutes due their similar toxicity to reproduction.</p>
Legal background:	<p>Formamide is listed on the Candidate list (REACH).</p> <p>In France: The substances on the Candidate list are included in the AGECE legislation (LOI n° 2020-105).</p> <p>Formamide is restricted in puzzle mats in Belgium and France and is included in the Toy Safety Directive (limit value 200 mg/kg).</p>
Test method:	<p>No standardised test method available.</p> <p>Solvent extraction. Test equipment: GC-MS or LC-MS</p> <p>LOQ: 50 mg/kg</p>

Hydrazine

Required limit value:	Should not be used in processes or present in products.
CAS RN:	Hydrazine: 302-01-2, 7803-57-8
Properties:	Carcinogenic, allergenic, toxic.
Use:	Mainly used as a chemical blowing agent in preparing polymer foams.
Comments:	Use physical blowing agents such as carbondioxide, hydrocarbons or nitrogen as alternative to chemical blowing agents when possible
Legal background:	<p>Hydrazine is listed on the Candidate list (REACH).</p> <p>In France: The substances on the Candidate list are included in the AGECE legislation (LOI n° 2020-105).</p> <p>In California: Hydrazine is listed in Proposition 65. Safe Harbor Limit: NSRL 0.04 µg/day.</p>
Test method:	<p>No standardised test method available for textiles.</p> <p>Test equipment: UV-VIS Spectrometer. Detection limit: There is no standard international detection limit yet.</p> <p>Test equipment: GC-MS LOQ: 200 mg/kg</p>

Hydroxymethyl acrylamide

Required limit value:	Should not be present in products.
CAS RN:	N-(hydroxymethyl)acrylamide: 924-42-5
Properties:	Mutagenic, Carcinogenic, Allergenic (skin sensitizer).
Use:	Used as a monomer in various applications in textiles and paper. In adhesives, as binders as well as in surface coatings and resins for varnishes, films and sizing agents. It is used in textile finishing for crease resistance, in antistatic agents and to increase the wet strength of paper.
Comments:	Residues of this monomer can be left in low concentrations in textile and paper products. Decomposition can cause the formation of formaldehyde.
Legal background:	Included in the Candidate list (REACH). In France: The substances on the Candidate list are included under the AGECE legislation (LOI n° 2020-105).
Test method:	No standardized test method available. Test equipment LC-MS, GC-MS. LOQ: 500 ppm

Melamine

Required limit value:	Should not be present in products.
CAS RN:	108-78-1
Properties:	Persistent and mobile in environment, Toxic, Carcinogenic
Use:	Used to make melamine derivatives and melamine polymers. Melamine formaldehyde polymers as tanning agent for leather, hand building finish, crease resistant finish (cross-linker) especially for cellulosic fabrics, wet fastness finish. Melamine derivatives in water repellents. Also, in flame retardants for textile coatings (blowing agent) and foams (especially polyurethane foams).
Legal background:	Included in the Candidate list (REACH). In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).
Test method:	No standardized test method available. Test equipment LC-MS, GC-MS.

PAH - Polycyclic aromatic hydrocarbons

Required limit value:	Should not be used in processes or present in products.
CAS RN:	Various, regulated PAHs are listed in Appendix 9.
Properties:	Carcinogenic, allergenic (sensitizer), toxic. Several are persistent, bioaccumulative and toxic in the environment.
Use:	<p>PAHs are not synthesized chemically for industrial purposes. The major source of PAHs is the incomplete combustion of organic material such as coal, oil and wood.</p> <p>They are used as intermediaries in pharmaceuticals, agricultural products, photographic products, thermosetting plastics, lubricating materials, and other chemical industries. May be found as impurities in rubber materials, soft plastics, leather, and colored plastics containing carbon black.</p>
Comments:	Avoid critical sources for PAH such as Carbon Black and contaminated mineral oil-based lubricants (extender oil) in rubber.

Legal background:

Regulated PAHs are listed in Appendix 9.

Eight PAHs are listed in annex XVII, entry 50 of the Regulation (EC) No 1907/2006 (REACH). Rubber and plastic materials in skin contact shall not include any of those eight PAHs in amounts higher than 1 mg/kg. For materials in toys or childcare articles the limit value is 0.5 mg/kg.

Eight PAHs are listed in annex XVII, entry 72 of the Regulation (EC) No 1907/2006 (REACH), with a restriction limit of 1 mg/kg in clothing, related accessories, textiles other than clothing in skin contact, or footwear.

Ten PAHs are included on the Candidate list (REACH).

In France: The substances on the Candidate list are included in the AGECE legislation (LOI n° 2020-105).

The restriction does not apply to clothing, related accessories, textiles other than clothing, or footwear within the scope of Regulation (EU) 2016/425 (PPE).

The voluntary German GS standard that most products in the German market follows, has requirements for 15 PAHs.

In California: Several PAH are listed in Proposition 65. Safe Harbor Limit: NSRL 0.033-0.35 µg/day.

Test method:

AfPS GS 2019-01 PAK
ISO/TS 16190 (footwear)
EN 17132 (textile)
LOQ: 0.2 mg/kg

Quinoline

Required limit value:	Should not be present in products.
CAS RN:	91-22-5
Properties:	Carcinogenic and mutagenic.
Use:	Quinoline is used mainly as an intermediate in the manufacture of other products. Quinoline is also used as a catalyst or vulcanisation accelerator in rubber, a corrosion inhibitor, in metallurgical processes, in the manufacture of dyes, in polymers, and as a solvent for resins and terpenes. Many disperse and vat dyes may contain quinoline as a contaminate in their dispersing agents.
Comments:	Isoquinoline (CAS RN 119-65-3) with similar structure (and concerns) as quinoline, and other quinoline derivatives have similar area of use.
Legal background:	<p>Quinoline has a restriction limit of 50 mg/kg in clothing, related accessories, textiles other than clothing in skin contact, or footwear according to Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 72. The restriction does not apply to clothing, related accessories, textiles other than clothing, or footwear within the scope of Regulation (EU) 2016/425 (PPE).</p> <p>In California: Quinoline is listed in Proposition 65.</p>
Test method:	<p>No standardised test method available for textiles or leather.</p> <p>Test equipment: GC-MS, LC-MS. LOQ: 10 mg/kg</p>

Solvents - Aliphatic organic solvents

Required limit value:	No odour.
CAS RN:	Various
Properties:	Liquids or gases. Inhalation can affect the nervous system and cause headache, fatigue and nausea , as well as chronic effects. Cause irritation on skin, eyes and mucous membranes.
Use:	Solvents for dyeing and printing. Solvents that have been used for cleaning of spinning oils from textiles are often found in amounts of 10-20 mg/kg. The limit for humans to sense a smell lies around 100 mg/kg for most substances.
Comments:	If possible, chose water-based systems based on easily degradable surfactants. If not possible to switch over to water based-water-based systems, there are statutory hygienic limit values for employees in many countries for strict compliance to maintain workers safety
Legal background:	<p>2-methoxyethyl acetate, CAS RN 110-49-6 is on the Candidate list (REACH).</p> <p>Manufacturers in EU are required to follow the Industrial emissions directive, 2010/75/EU .</p> <p>In France: The substances on the Candidate List are included in the AGECE legislation (LOI n° 2020-105). The legislation also regulates certain mineral oil in ink for packaging and printed paper. Limit: 0.1% for mineral oil saturated hydrocarbons (MOSH) consisting of 16 to 35 carbon atoms by January 2025</p>
Test method:	<p>SNV 195 651, screening method. Panel odour test.</p> <p>Detection limit: No odour.</p> <p>No standardised quantitative test method available. Test equipment: GC-MS</p>

Solvents - Aromatic organic solvents

Required limit value:	Should not be present in products.
CAS RN:	Various
Properties:	Liquids or gases. Inhalation can affect the nervous system and cause headache, fatigue and nausea, as well as chronic effects. Cause irritation on skin, eyes and mucous membranes. Kerosene and diesel odour in finished products. Some aromatic organic compounds are carcinogenic.
Use:	Solvents for dyeing and printing. Stain removal. Coatings and binders.
Comments:	To avoid problems with organic solvents, switching to water-based dyeing and printing processes, is recommended. Many but not all aromatic organic solvents are volatile organic compounds (VOC). If not possible to switch over to water based systems, there are statutory hygienic limit values for employees in many countries for strict compliance to maintain workers safety.
Legal background:	<p>Benzene (CAS RN 71-43-2) has a restriction limit of 5 mg/kg in clothing, related accessories, textiles other than clothing in skin contact, or footwear according to Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 72. The restriction does not apply to clothing, related accessories, textiles other than clothing, or footwear within the scope of Regulation (EU) 2016/425 (PPE).</p> <p>Manufacturers in the EU are required to follow the Industry Emissions Directive "IED", 2010/75/EU.</p> <p>In California: Benzene is listed in Proposition 65. Safe Harbor Limit: NSRL 6.4 µg/day (oral), 13 µg/day (inhalation). MADL: 24 µg/day (oral), 49 µg/day (inhalation).</p> <p>France regulates certain mineral oils in ink for packaging and printed paper (the AGECE legislation LOI n° 2020-105). Limits: 1.0% for Aromatic hydrocarbons (MOAH) consisting of 1 to 7 aromatic rings by January 2023; 0.1% for MOAH consisting of 1 to 7 aromatic rings by January 2025 and 1 ppm MOAH compounds containing 3 to 7 aromatic rings by January 2025.</p>
Test method:	<p>SNV 195 651, screening method. Panel odour test. Detection limit: No odour.</p> <p>No standardised quantitative test method available. Test equipment: GC-MS (EN 17137 (textile) can be used as reference for in-house methods though it only applies to chlorobenzenes and chlorotoluenes) LOQ: 0.5 mg/kg</p>

Solvents - Chlorinated organic solvents

Required limit value:	Should not be used in processes or present in products.
CAS RN:	Various
Properties:	Liquid or gas. Affect the nervous system. Irritating to skin and mucous membranes. Many chlorinated organic solvents are dangerous for the environment.
Use:	<p>Solvents used in the manufacture of rubber, metal paint and fur industry used for grease and oil, e.g. in stain removers. Also used in cleaning agents and detergents. Solvents in lubricating oils. Solvents in dyeing of synthetic fibres (carriers) at atmospheric pressure. Certain chlorobenzenes can be used to make deodorisers or degreasers for leather and wool, where 1,2-dichlorobenzene is used. Solvents in printing. Finishing agents. Fabric softeners. Also used as moth-proofing agent in textiles and for the manufacture of silk and pearls.</p> <p>See also under heading "Flame retardants".</p>
Comments:	<p>Where possible, apply water-based emulsions based on easily degradable surfactants. Alternative products are available or under development for all uses.</p> <p>Carriers do not need to be used for dyeing in high-pressure machinery.</p> <p>Categories of carriers also recommended not to be used: Chloronaphthalenes, which are toxic and cause liver damage, chlorobenzenes and chlorotoluenes, which are toxic and can cause liver and kidney damage and irritate eyes and airways.</p>
Legal background:	<p>Manufacturers in EU are required to follow the Industry Emissions Directive (IED), 2010/75/EU.</p> <p>In France: The substances on the Candidate List are included in the AGECL legislation (LOI n° 2020-105).</p> <p>In California: Several chlorinated solvents are listed in Proposition 65. Safe Harbor Limit: NSRL 3-50 µg/day.</p>

Solvent	CAS-RN	Legal framework	Legal requirement
Chloroform	67-66-3	Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 32-38.	Shall not be placed on the market, or used as substances, as constituents of other substances or in mixtures in concentrations equal to or greater than 0.1% by weight.
1,1,2-trichloroethane	79-00-5		
1,1,2,2-tetrachloroethane	79-34-5		
1,1,1,2-tetrachloroethane	630-20-6		
Pentachloroethane	76-01-7		
1,1-dichloroethylene	75-35-4		
1,4-dichlorobenzene	106-46-7		
Carbon tetrachloride	56-23-5	Regulation (EC) No 1005/2009 of the European Parliament and of the Council of 16 September 2009 on substances that deplete the ozone layer.	Shall not be produced, placed on the market, or used.
1,1,1-trichloroethane	71-55-6		
α,α,α,4-tetrachlorotoluene;	5216-25-1	Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 72.	1 mg/kg /in clothing, related accessories, t extiles other than clothing in skin contact, or footwear
p-chlorobenzotrichloride	98-07-7		
α,α,α-trichlorotoluene;	100-44-7		
benzotrichloride			
α-chlorotoluene;		Listed in both annex XIV and in the Candidate List of Substances of Very High Concern for authorization and annex XIV in Regulation (EC) No 1907/2006 (REACH).	0.1% by weight in articles for information duty.
benzyl chloride			
Trichloroethylene	79-01-6		
1,2,3-trichloropropane	96-18-4	Candidate List of Substances of Very High Concern for authorization in Regulation (EC) No 1907/2006 (REACH).	0.1% by weight in articles for information duty.

Test method:

No standardised test method for all substances available.

Test equipment: GC-MS, GC-ECD
EN 17137 (textile) for chlorotoluenes and chlorobenzenes.

LOQ: 0.5 mg/kg

Solvents - DMFa (N,N-dimethylformamide)

Required limit value:	Should not be present in products in concentrations above 500 mg/kg (sum of DMFa, DMAC and NMP).
CAS RN:	N,N-dimethylformamide (DMFa): 68-12-2
Properties:	Toxic to reproduction. It may have a faint amine odour in finished products.
Use:	Good solvency properties for polymers. Used as solvent in textile coating processes and in production of leather imitations, acrylic fibers, aramide fibers and elastomers such as PU. Can also be used for resins, metal coated plastics and as a paint stripper.
Comments:	Use "water-borne" PU, if possible, which contain less DMFa.
Legal background:	<p>DMFa is included on the Candidate list (REACH).</p> <p>DMFa have a restriction limit of 3000 mg/kg in clothing, related accessories, textiles other than clothing in skin contact, or footwear according to Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 72.</p> <p>The restriction does not apply to clothing, related accessories, textiles other than clothing, or footwear within the scope of Regulation (EU) 2016/425 (PPE).</p> <p>The standard for protective gloves (PPE) limits DMFa (1000 ppm) in gloves containing PU.</p> <p>In France: The substances on the Candidate list are included in the AGECE legislation (LOI n° 2020-105).</p> <p>Restricted in polyurethane-coated work gloves in Germany. The maximum DMFa content must be less than 10 mg/kg glove material (TRGS 401).</p> <p>In California: DMFa is listed in Proposition 65.</p>
Test method:	<p>EN 16178 (footwear and footwear components)</p> <p>EN 16778 (protective gloves)</p> <p>CEN ISO 16189 (footwear and footwear components)</p> <p>EN 17131 (textile)</p> <p>Test equipment: GC-MS</p> <p>LOQ: 10 mg/kg</p>

Solvents - DMAC (N,N-dimethylacetamide)

Required limit value:	Should not be present in products in concentrations above 500 mg/kg (sum of DMFa, DMAC and NMP).
CAS RN:	N,N-dimethylacetamide (DMAC): 127-19-5
Properties:	Toxic to reproduction, irritating.
Use:	Good solvency properties for polymers. Used as solvent in textile coating processes and in production of leather imitations, acrylic fibers, aramide fibers and elastomers such as PU. Can also be used for resins, metal coated plastics and as a paint stripper.
Comments:	Use "water-borne" systems if possible.
Legal background:	<p>DMAC is included on the Candidate list (REACH).</p> <p>DMAC has a restriction limit of 3000 mg/kg in clothing, related accessories, textiles other than clothing in skin contact, or footwear according to Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 72. The restriction does not apply to clothing, related accessories, textiles other than clothing, or footwear within the scope of Regulation (EU) 2016/425 (PPE).</p> <p>In France: The substances on the Candidate List are included in the AGECE legislation (LOI n° 2020-105).</p> <p>In California: DMAC is listed in Proposition 65.</p>
Test method:	<p>No standardised quantitative test method available for textiles. Test equipment: GC-MS, LC-MS</p> <p>(EN 17131 can be used as reference for in-house methods though it only applies to DMFa) LOQ: 10 mg/kg</p>

Solvents - NMP (N-methyl-2-pyrrolidone)

Required limit value:	Should not be present in products in concentrations above 500 mg/kg (sum of DMFa, DMAC and NMP).
CAS RN:	N-methyl-2-pyrrolidone (NMP): 872-50-4
Properties:	Toxic to reproduction, irritating.
Use:	<p>Good solvency properties for polymers. Used as solvent in textile coating processes and in production of leather imitations, acrylic fibers, aramide fibers and elastomers such as PU. Can also be used for resins, metal coated plastics and as a paint stripper.</p> <p>Polyamide precursor. SBR (styrene-butadiene) latex production.</p>
Comments:	Use "water-borne" systems if possible. Note that NEP (1-ethylpyrrolidin-2-one), CAS 2687-91-4 is not a suitable alternative to NMP since it is Reproduction Toxic 1B (a CMR substance) and on-going regulation of a limit value for working environment.
Legal background:	<p>NMP is included on the Candidate list (REACH).</p> <p>NMP has a restriction limit of 3000 mg/kg in clothing, related accessories, textiles other than clothing in skin contact, or footwear according to Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 72. The CMR restriction does not apply to clothing, related accessories, textiles other than clothing, or footwear within the scope of Regulation (EU) 2016/425 (PPE). NMP has also a limit value for working environment under Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 71.</p> <p>In France: The substances on the Candidate list are included in the AGECL legislation (LOI n° 2020-105).</p> <p>In California: NMP is listed in Proposition 65. Safe Harbor Limit: MADL 3200 µg/day (inhalation), 17000 µg/day (dermal).</p>
Test method:	<p>EN ISO 19070 (leather)</p> <p>No standardised quantitative test method available for textiles. (EN 17131 can be used as reference for in-house methods though it only applies to DMFa)</p> <p>Test equipment: GC-MS, LC-MS</p> <p>LOQ: 25 mg/kg</p>

Tin organic compounds (Organostannic compounds)

Required limit value:	Should not be present in products.
CAS RN:	Various
Properties:	Tributyltin, dibutyltin and dioctyltin compounds are different chemical substances that are toxic and dangerous for the environment. Bioaccumulative and persistent.
Use:	Dibutyltin compounds (DBT) and dioctyltin compounds (DOT) are used in consumer products as stabilizers (mainly PVC) or catalysts (PU and PVC). Organotin catalysts are used in a wide variety of polyurethane applications, aiding formation of the urethane bond and generally functioning as Lewis acid catalysts.
Comments:	<p>Alternative stabilizers are barium/zinc, potassium/zinc, calcium, calcium/zinc organic or methyltin stabilisers.</p> <p>Alternative catalysts can be organotitanate or zirconate compounds (e.g. titanium 2-ethylhexanoate) or amines such as bis- (dimethyl-aminoethyl) ether (BDMAEE) and triethylenediamine (TEDA) along with organometallic compounds such as potassium acetate.</p> <p>Trialkyltin compounds are biocides, see also the section regarding Biocidal agent.</p>
Legal background:	<p>Legal Limit: 0.1% by weight</p> <p>Dioctyltin (DOT), dibutyltin (DBT) compounds and tri-substituted organostannic compounds such as tributyltin (TBT) shall not be used in articles. Annex XVII of the Regulation (EC) No 1907/2006 (REACH), entry 20.</p> <p>Tributyltin oxide (TBTO), 56-35-9, Dibutyltin dichloride (DBTC), 683-18-1, 2-ethylhexyl 10-ethyl-4,4-dioctyl-7-oxo-8-oxa-3,5-dithia-4-dis-tannatetradecanoate (DOTE), 15571-58-1 and reaction mass of DOTE and MOTE, Dibutylbis(pentane-2,4-dionato-O,O')tin, 22673-19-4 and Dioctyltin dilaurate and related substances, e.g. 3648-18-8 are on the Candidate list (REACH).</p> <p>In France: The substances on the Candidate List are included in the AGECE legislation (LOI n° 2020-105).</p>
Test method:	<p>EN ISO 22744-1, -2 (textile)</p> <p>CEN ISO/TS 16179 (footwear).</p> <p>Test equipment: GC-MS.</p> <p>LOQ: 0.2 mg/kg</p>

PRODUCT-RELATED (PROPERTY-LENDING) CHEMICALS

Allergenic dyes

Required limit value:	Should not be present in products.
CAS RN:	Various, 21 dyes are listed in Appendix 1
Properties:	Highly allergenic (strong skin sensitizers). They may also have other hazardous properties.
Use:	Dyeing of textile and leather imitation goods.
Comments:	Use other feasible dyes that are not hazard classified as skin sensitizers (skin allergens).
Legal background:	<p>Legal limit: 0.1% by weight for Navy Blue, EC# 405-665-4 in chemical preparations used for colouring textile and leather articles in Annex XVII (entry 43) of Regulation (EC) No 1907/2006 of the European Parliament and of the Council (REACH).</p> <p>Eight disperse dyestuffs are banned in Germany, see Appendix 1.</p>
Test method:	<p>EN ISO 16373-1, -2, -3 (extractable dyestuff). DIN 54231 for textiles.</p> <p>LOQ: 50 mg/kg</p>

Banned arylamines related to azo dyes

Required limit value:	Azo dyes that are degradable to carcinogenic arylamines should not be present in products.
CAS RN:	Various, Substances are listed in Appendix 2
Properties:	Carcinogenic. Some are allergenic (sensitizer). Arylamines can form part of the molecular structure of a dye. Certain azo dyes can form the listed banned arylamines.
Use:	Constituent of dyes. Dyeing and printing.
Comments:	Dyes that can release one of the banned aromatic amines may not be used. See Appendix 2 for a description of banned arylamines.
Legal background:	<p>Legal limit in textile and leather articles: 0.003% by weight (30 mg/kg) per each of the arylamine breakdown products in the dyed parts of the article, which may come into direct and prolonged contact with the human skin or oral cavity.</p> <p>Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 43.</p> <p>4-chloro-o-toluidinium chloride, 2-Naphthylammoniumacetate, 4-methoxy-m-phenylene diammonium sulphate, 2,4-diaminoanisole sulphate and 2,4,5-trimethylaniline hydrochloride have a restriction limit of 30 mg/kg in clothing, related accessories, textiles other than clothing in skin contact, or footwear according to Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 72.</p> <p>Several arylamines are on the Candidate list (REACH).</p> <p>The restriction does not apply to clothing, related accessories, textiles other than clothing, or footwear within the scope of Regulation (EU) 2016/425 (PPE).</p> <p>Azo colorants that may release carcinogenic amines mentioned in REACH, entry 43 are limited in PPE clothing and protective gloves.</p> <p>In France: The substances on the Candidate List are included in the AGECE legislation (LOI n° 2020-105).</p> <p>In California: Several arylamines are listed in Proposition 65. Safe Harbor Limit: NSRL 0.001-110 µg/day.</p>
Test method:	<p>EN ISO 14362-1, -3 (textile)</p> <p>EN ISO 17234-1, -2 (leather)</p> <p>(methods specified in REACH Annex XVII, Appendix 10)</p> <p>LOQ: 20 mg/kg (per each of the arylamine breakdown products).</p>

UV stabilisers

Required limit value:	Should not be present in products.
CAS RN:	<p>2-benzotriazol-2-yl-4,6-di-tert-butylphenol (UV-320); 3846-71-7</p> <p>2,4-di-tert-butyl-6-(5-chlorobenzotriazol-2-yl)phenol (UV-327); 3864-99-1</p> <p>2-(2H-benzotriazol-2-yl)-4,6-ditertpentylphenol (UV-328); 25973-55-1</p> <p>2-(2H-benzotriazol-2-yl)-4-(tert-butyl)-6-(sec-butyl)phenol (UV-350); 36437-37-3</p> <p>2-(2H-benzotriazol-2-yl)-4-(1,1,3,3-tetramethylbutyl)phenol (UV-329), 3147-75-9</p> <p>Bumetrizole (UV-326) 3896-11-5</p> <p>3-benzylidene camphor (3-BC); 15087-24-8</p> <p>6,6'-di-tert-butyl-2,2'-methylenedi-p-cresol (DBMC); 119-47-1</p>
Properties:	<p>Benzotriazoles are Persistent, Bioaccumulative and Toxic.</p> <p>Benzylidene camphor has endocrine (hormone) disrupting properties. DBMC is toxic to Reproduction.</p>
Use:	<p>Benzotriazoles are UV-stabilizer for plastics, polyurethanes and rubber and constituent in formulations used for coating of surfaces, e.g. cars or special industrial wood coatings. Also used in dishwasher detergents, dry cleaning equipment, and de-icing/anti-icing fluids. 3-benzylidene camphor is a UV-stabilizer for cosmetics, but possibly also for polymeric materials.</p> <p>DBMC is an antioxidant and/or stabilizer used in plastic and rubber.</p>
Legal background:	<p>UV-320, UV-326, UV-327, UV-328, UV-329, UV-350, 3-BC and DBMC are on the Candidate list (REACH).</p> <p>In France: The substances on the Candidate List are included in the AGECL legislation (LOI n° 2020-105).</p>
Test method:	<p>ISO 24040:2022 (benzotriazoles)</p> <p>Test equipment: GC-MS, LC-MS, GC-ECD</p> <p>LOQ: 50 mg/kg (benzotriazoles)</p> <p>LOQ: 100 mg/kg (3-BC and DBMC)</p>

Cadmium (Cd) and cadmium salts

Required limit value:	Should not be present in products.
CAS RN:	Cadmium (metal): 7440-43-9
Properties:	Heavy metal that occurs naturally in small quantities in nature. Toxic to aquatic organisms. Non-biodegradable. Dangerous for the environment. Can cause kidney damage.
Use in textile and leather:	Can occur in pigmented plastisol(rubber prints.
Use in accessories and packaging:	Surface treatment. Pigment in colouring agent. Also in plastics as stabilizers and pigment. Cadmium-based stabilizers to increase the endurance of the material. For recycled packaging cadmium may have had a different original use.
Comments:	<p>Alternatives are available, such as calcium-zinc based stabilizers. Order cadmium-free processes and materials.</p> <p>Occurrence in materials below 0.5 mg/kg is generally regarded as contaminations which cannot be controlled.</p>

Legal background:

Legal limit: 0.01% by weight (100 mg/kg) in articles produced from plastic material and in the paint of painted articles. Shall not be used in brazing fillers or in jewellery. Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 23.

Cadmium, Cadmium oxide (1306-19-0), Cadmium sulphide (1306-23-6), Cadmium chloride (10108-64-2), Cadmium fluoride (7790-79-6), Cadmium sulphate (10124-36-4, 31119-53-6), Cadmium nitrate (10325-94-7), Cadmium carbonate (513-78-0) and Cadmium hydroxide (21041-95-2) are on the Candidate list (REACH).

The sum of concentration levels of lead, cadmium, mercury and hexavalent chromium present in packaging or packaging components shall not exceed 100 ppm by weight.

Directive (EC) No 94/62/EC of 20 December 1994 on packaging and packaging waste.

Cadmium and its compounds have a restriction limit of 1 mg/kg (extractable content) in clothing, related accessories, textiles other than clothing in skin contact, or footwear according to Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 72. The restriction does not apply to clothing, related accessories, textiles other than clothing, or footwear within the scope of Regulation (EU) 2016/425 (PPE).

In France: The substances on the Candidate List are included in the AGECE legislation (LOI n° 2020-105).

In California: Cadmium and cadmium compounds are listed in Proposition 65. Safe Harbor Limit: MADL cadmium 4.1 µg/day (oral)

Cadmium is restricted in Denmark. Danish legal limits: 75 mg/kg. (Bekendgørelse nr. 858 af 5. September 2009 om forbud mod import salg og fremstilling af cadmiumholdige varer).

Test method:

EN 16711-1 (total content in textiles and accessories).
EN 16711-2 (extractable content in and accessories).
(Coated fabrics and garment components (e.g. buttons, zips, etc.) can also be tested by the methods above.)

EN ISO 17072-1 (extractable content in leather).
EN ISO 17072-2 (total content in leather).

LOQ: 10 mg/kg (total content), (0.1 mg/kg (extractable content).

Test equipment: XRF screening for metal cadmium.
LOQ: 50 mg/kg

CMR, Carcinogenic, Mutagenic, Reproductive toxic dyestuffs

Required limit value:	Should not be present in products.
CAS RN:	Various, 15 substances are listed in Appendix 3
Properties:	Carcinogenic, mutagenic or reproductive toxic. Characteristics: Dyestuffs that are classified as carcinogens, mutagenic, reproductive toxic according to CLP not including class 2 (only cat. 1A and 1B are CMR).
Use:	Dyeing of textile and leather goods.
Comments:	Alternatives: Use other dyestuff than the substances in Appendix 3.
Legal background:	<p>C.I. Solvent Blue 4, C.I. Basic Blue 26, C.I. Basic Violet 3, Michler's base (101-61-1), 4,4'-bis(dimethylamino)-4''-(methylamino)trityl alcohol (561-41-1), C.I. Direct Black 38 (1937-37-7) and C.I. Direct Red 28 (573-58-0) are on the Candidate list (REACH).</p> <p>Restrictions for use of substances, harmonised classified as carcinogens, mutagenic, reproductive toxic according to CLP including class 2 (only 1A and 1B are CMR), as substances, as constituents of other substances or in mixtures. These are found in REACH annex XVII, entry 28-30.</p> <p>C.I. Disperse Blue 1, C.I. Basic Red 9 and C.I. Basic Violet 3 with $\geq 0,1$ % of Michler's ketone have a restriction limit of 50 mg/kg in clothing, related accessories, textiles other than clothing in skin contact, or footwear according to Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 72. The restriction does not apply to clothing, related accessories, textiles other than clothing, or footwear within the scope of Regulation (EU) 2016/425 (PPE).</p> <p>In France: The substances on the Candidate List are included in the AGECE legislation (LOI n° 2020-105).</p> <p>In California: Several dyestuff are listed in Proposition 65. Safe Harbor Limit: NSRL 0.09-300 µg/day.</p>
Test method:	<p>EN ISO 16373 (extractable dyestuffs)</p> <p>LOQ: 50 mg/kg</p>

Chromium VI

Required limit value:	Should not be present in products.
CAS RN:	Chromium VI (Cr+6, hexavalent chromium): 18540-29-9
Properties:	Dangerous for the environment. Carcinogenic. Allergenic (sensitizer). Toxic.
Use:	<p>Metal plated metal parts. Chromic acid is used as wood preservative. Some dyes may contain chromium.</p> <p>Oxidation agent. Fixing chemical. Used for finishing of direct dyes to improve their wash fastness. Potassium dichromate is used for oxidation of vat and sulphur dyes. Chromium salts are used for preparation and finishing of acid dyes on silk and wool.</p> <p>Tanning leather with basic chromium III salts is the most widely used method where chromium VI may occur as an impurity. Etching of artificial leather and rubber.</p>
Comments:	<p>Chromium III is an alternative in surface treatment of metal but only for decorative metal plating and not hard metal plating. Other metals such as tin and zinc may be used for metal plating instead of chromium VI.</p> <p>Chromium III is an alternative as fixing agent in mordant dyeing.</p> <p>Use acid dyes with high colourfastness to avoid use of chromium salts for dyeing of polyamide, silk, wool and leather. Use hydrogen peroxide and other per-salts to avoid the use of chromium VI-based salts.</p> <p>In leather tanning chromium III is used but can oxidize to chromium VI under uncontrolled conditions. Oxidation can be limited by keeping pH below 4.5. Vegetable tanning agents are alternatives for leather if these tanning agents are formaldehyde free. Tanning with titanium is an emerging technology.</p> <p>Chromium VI substances on candidate list are listed in Appendix 5.</p>

Legal background:

Legal limit: 0.0003% by weight (3 mg/kg) for leather in direct skin contact. Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 47.

Chromium VI compounds have a restriction limit of 1 mg/kg (extractable chromium VI content) in clothing, related accessories, textiles other than clothing in skin contact, or footwear according to Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 72.

The restriction does not apply to clothing, related accessories, textiles other than clothing, or footwear within the scope of Regulation (EU) 2016/425 (PPE).

Chromium VI is limited (3 ppm) in PPE standard for leather clothing and footwear.

Chromium VI compounds on the Candidate list (REACH) are listed in Appendix 5.

Several Chromium VI compounds are also included in REACH Annex XIV.

The sum of concentration levels of lead, cadmium, mercury and chromium VI present in packaging or packaging components shall not exceed 100 ppm by weight.

Directive (EC) No 94/62/EC of 20 December 1994 on packaging and packaging waste.

In France: The substances on the Candidate List are included in the AGECL legislation (LOI n° 2020-105).

In California: Chromium VI is listed in Proposition 65. Safe Harbor Limit: NSRL 0.001 µg/day (inhalation), MADL 8.2 µg/day (oral).

Test method:

ISO 17075 -1, -2 (leather).
EN ISO 10195 (pre-aged leather)
No standardised test method available for textiles.
Test equipment: UV-VIS Spectrometer.

LOQ: 0.5 mg/kg

Metal chromium (Cr) may be analysed by
EN 16711-1 (total content in textiles and accessories)
EN 16711-2 (extractable content in textile and accessories)
ISO 17072-1 (extractable content in leather)
ISO 17072-2 (total content in leather).
ISO 19050 (rubber)

LOQ: 10 mg/kg (total content), 0.1 mg/kg (extractable content). XRF screening for metal chromium.
LOQ: 50 mg/kg

Flame retardants/Biocides - Boric acid, borate compounds

Required limit value:	Should not be present in products.
CAS RN:	Boric acid; 10043-35-3 and 11113-50-1 Disodium tetraborate anhydrous; 1303-96-4, 12179-04-3 and 1330-43-4 Tetraboron disodium heptaoxid, hydrate; 12267-73-1 Sodium perborate; perboric acid, sodium salt, 234-390-0 Sodium peroxometaborate, 7632-04-04 Disodium octaborate, 12008-41-2 Orthoboric acid, sodium salt, e.g. 13840-56-7 Barium diboron tetraoxide, 13701-59-2
Properties:	Toxic to reproduction.
Use:	Wood veneers/pressed wooden panels and boards. Boric acid and other boron compounds may be used as flame retardant in cellulosic materials, mainly wood, and biocidal agent in boards. Borate compounds may be used as bleaching agents in chemical preparations.
Comments:	Alternative flame retardants are available but must be evaluated. Halogen-free alternatives include phosphorus- and nitrogen-based flame retardants. Non-chemical barrier technologies such as blends of natural and synthetic fibres used in furniture and mattresses and high performance synthetic materials used in fire-fighter uniforms and other protective clothing can be options.
Legal limit:	Boric acid, Disodium tetraborate anhydrous, Disodium octaborate, Tetraboron disodium heptaoxide, hydrate, Sodium perborate; Perboric acid, sodium salt, Sodium peroxometaborate and Orthoboric acid, sodium salt are on the Candidate list (REACH). In France: The substances on the Candidate List are included in the AGECE legislation (LOI n° 2020-105).
Test method:	Test equipment: AAS, ICP-MS and ICP-OES. LOQ: 25 mg/kg for individual compounds (10 mg/kg for total Boron content).

Flame retardants/Plasticizers - Chloroparaffins

Required limit value:	Should not be present in products.
CAS RN:	Short-chain chloroparaffins (C10-C13, SCCP): e.g. 85535-84-8 Medium-chain chloroparaffins (C14-C17, MCCP): e.g. 85535-85-9, 198840-65-2, 1372804-76-6. Long-chain chloroparaffins (C18-, LCCP): 85535-86-0
Properties:	Persistent, bioaccumulative and toxic. Carcinogenic. Allergenic (sensitizer).
Use in textile:	Plasticizers and flame retardant in plastic material. Plasticizers in coatings and synthetic leather.
Use in leather:	Fat liquoring agent in leather production.
Use in accessories and packaging:	Plasticizers and flame retardant in plastic material and rubber.
Comments:	Alternative flame retardants are available but must be evaluated. Halogen-free alternatives include phosphorus- and nitrogen-based flame retardants. Non-chemical barrier technologies such as blends of natural and synthetic fibres used in furniture and mattresses and high performance synthetic materials used in firefighter uniforms and other protective clothing can be options.
Legal background:	Legal limit: Shall not occur. Short-chain chloroparaffins are listed as POP in the Stockholm Convention on Persistent Organic Pollutants (POPs) and banned in EU by Regulation (EU) No 2019/1021. Residues below 0.15 % SCCP by weight in articles are allowed to be placed on the market and used, as this is the amount of SCCP that may be present as an impurity in an article produced with MCCP. Short-chain chloroparaffins (C10-C13) and Medium-chain chloroparaffins (C14-C17) are on the Candidate list (REACH). In France: The substances on the Candidate List are included in the AGECL legislation (LOI n° 2020-105). In California: Chloroparaffins are listed in Proposition 65. Safe Harbor Limit: NSRL 8 µg/day.
Test method:	EN ISO 22818 (textiles). ISO 18219-1,-2 (leather). LOQ: 100 mg/kg (textiles)

Flame retardants/Plasticizer - Bis(2-ethylhexyl) tetrabromophthalate (TBPH)

Required limit value:	Should not be present in products.
CAS RN:	26040-51-7
Properties:	Very persistent and very bioaccumulative
Use:	Flame retardant and plasticizer for plastics, mainly PVC. In carpet backings and fabric coatings. Used in adhesives and sealants.
Comments:	Alternative flame retardants are available but must be evaluated. Halogen-free alternatives include phosphorus- and nitrogen-based flame retardants. Non-chemical barrier technologies such as blends of natural and synthetic fibres used in furniture and mattresses and high performance synthetic materials used in fire-fighter uniforms and other protective clothing can be options.
Legal background:	Bis(2-ethylhexyl) tetrabromophthalate covering any of the individual isomers and/or combinations thereof is listed in the Candidate list (REACH).
Test method:	No standardised test method available. Test equipment: GC-MS, LC-MS, GC-ECD, XRF to detect bromine). LOQ: 100 mg/kg

Flame retardants - Hexabromocyclododecan (HBCDD)

Required limit value:	Should not be present in products.
CAS RN:	Hexabromocyclododecane (HBCD, HBCDD): 25637-99-4, 3194-55-6, 134237-50-6, 134237-51-7 and 134237-52-8
Properties:	<p>Persistent, bioaccumulative and toxic. Halogenated organic additives in polymers may leach out and have a negative impact on health and environment.</p> <p>Halogen containing polymers may form highly corrosive substances and an undefined range of halogenated substances that may be PBT or CMR when incinerated.</p>
Use:	Flame retardant treatment of products, (i.e upholstery and interior textiles), where fire protection is required by regulation or requested by customer. Also used in packaging flakes made of polystyrene (PS).
Comments:	Alternative flame retardants are available but must be evaluated. Halogen-free alternatives include phosphorus- and nitrogen-based flame retardants. Non-chemical barrier technologies such as blends of natural and synthetic fibres used in furniture and mattresses and high performance synthetic materials used in firefighter uniforms and other protective clothing can be options.
Legal background:	<p>Legal limit: Shall not occur.</p> <p>Hexabromocyclododecane is listed as POP in the Stockholm Convention on Persistent Organic Pollutants (POPs) and is banned in EU by Regulation (EU) No 2019/1021. Residues below 100 ppm by weight are allowed in articles, as this amount may be present as an impurity.</p> <p>Hexabromocyclododecane (HBCDD) and all major isomers are listed on the Candidate list (REACH).</p> <p>In France: The substances on the Candidate List are included in the AGECL legislation (LOI n° 2020-105).</p>
Test method:	<p>EN ISO 17881-1 (textiles).</p> <p>Test equipment: GC-MS, LC-MS, GC-ECD</p> <p>LOQ: 20 mg/kg</p>

Flame retardants - Polybrominated biphenyls (PBB) and Polybrominated diphenyl ethers (PBDE)

Required limit value:	Should not be present in products.
CAS RN:	Polybrominated biphenyls: 59536-65-1 (mix) Hexabromobiphenyl: 36355-01-8 Tetrabromodiphenyl ether (TetraBDE): 5436-43-1 Pentabromodiphenyl ether (PentaBDE): 32534-81-9, 60348-60-9 Hexabromodiphenyl ether (HexaBDE): 68631-49-2, 207122-15-4 Heptabromodiphenyl ether (HeptaBDE): 207122-16-5, 446255-22-7 Octabromodiphenyl ether (OctaBDE): 32536-52-0 Decabromodiphenyl ether (DecaBDE): 1163-19-5
Properties:	<p>Persistent, bioaccumulative and toxic. Halogenated organic additives in polymers may leach out and have a negative impact on health and environment.</p> <p>Halogen containing polymers may form highly corrosive substances and undefined range of halogenated substances that may be PBT or CMR when incinerated.</p>
Use:	Flame-retardant treatment of products, (i.e. upholstery and interior textiles), where fire protection is required by regulation or requested by customer.
Comments:	Alternative flame retardants are available but must be evaluated. Halogen-free alternatives include phosphorus- and nitrogen-based flame retardants. Non-chemical barrier technologies such as blends of natural and synthetic fibres used in furniture and mattresses and high performance synthetic materials used in firefighter uniforms and other protective clothing can be options.
Legal background:	<p>Legal limit: Shall not occur.</p> <p>TetraBDE, PentaBDE, HexaBDE, HeptaBDE, DecaBDE and Hexabromobiphenyl are listed as POP in the Stockholm Convention on Persistent Organic Pollutants (POPs) and are banned in EU by the POPs regulation (EU) No 2019/1021. Residues of TetraBDE, PentaBDE, HexaBDE, HeptaBDE, DecaBDE in mixtures and articles are considered as impurities if the sum of them is below 500 ppm. In substances, residues below 10 mg/kg by weight of each brominated diphenylether is considered as impurities. Hexabromobiphenyl is banned in detectable content.</p>

OctaBDE, and polybrominated biphenyls (PBBs), are restricted in entry 45 and entry 8 of Annex XVII to Regulation (EC) No 1907/2006 (REACH).

-The legal limit for PBBs in textile articles with skin contact is detection limit.

-The legal limit for OctaBDE in articles or in flame-retardant parts of articles is 0.1 % by weight.

DecaBDE is on the Candidate list (REACH).

PBBs are listed in the Rotterdam Convention.

In France: The substances on the Candidate List are included in the AGECL legislation (LOI n° 2020-105).

In California: Pentabromodiphenyl ether mixture DE-71 and polybrominated biphenyls and polychlorinated biphenyls are listed in Proposition 65. Safe Harbor Limits: NSRL PBB 0.02 µg/day, PCB 0.09 µg/day.

Test method:

EN ISO 17881-1 (textiles)

EN 16377 for PBB (plastics)

Test equipment: GC-MS, LC-MS, GC-ECD.

LOQ: 10 mg/kg

Flame retardants – TCEP

Required limit value:	Should not be present in products.
CAS RN:	Tris(2-chlorethyl)phosphate (TCEP): 115-96-8
Properties:	<p>Toxic for reproduction and suspected of causing cancer. Toxic to aquatic life with long-lasting effects.</p> <p>Halogen containing polymers may form highly corrosive substances and undefined range of halogenated substances that may be PBT or CMR when incinerated.</p>
Use:	Flame-retardant treatment of products, (i.e. upholstery and interior textiles), where fire protection is required by regulation or requested by customer. Plasticizers. May be used in leather, PU and PVC.
Comments:	<p>Alternative flame retardants are available but must be evaluated. Halogen-free alternatives include phosphorus- and nitrogen-based flame retardants. Non-chemical barrier technologies such as blends of natural and synthetic fibres used in furniture and mattresses and high performance synthetic materials used in firefighter uniforms and other protective clothing can be options.</p>
Legal background:	<p>Tris(2-chlorethyl) phosphate (TCEP) is on the Candidate list (REACH).</p> <p>In France: The substances on the Candidate List are included in the AGECE legislation (LOI n° 2020-105).</p> <p>In California: TCEP is listed in Proposition 65.</p>
Test method:	<p>EN ISO 17881-2 (textiles)</p> <p>Test equipment (for non-textile materials): GC-MS, LC-MS, GC-ECD</p> <p>LOQ: 5 mg/kg</p>

Flame retardants/Plasticizers - Trisubstituted phosphates

Required limit value:	Should not be present in products.
CAS RN:	Trixylyl phosphate: 25155-23-1 isopropylated phenyl phosphate (3:1), 68937-41-7
Properties:	Toxic for reproduction.
Use:	Plasticizer and flame retardant of PVC and PU. Plasticizer of vinylite (a copolymer of vinyl chloride and vinyl acetate), cellulosic resins and natural and synthetic rubber.
Comments:	Alternative flame retardants are available but must be evaluated. Halogen-free alternatives include phosphorus- and nitrogen-based flame retardants. Non-chemical barrier technologies such as blends of natural and synthetic fibres used in furniture and mattresses and high performance synthetic materials used in firefighter uniforms and other protective clothing can be options.
Legal background:	Trixylyl phosphate: 25155-23-1 and Phenol, isopropylated, phosphate (3:1), 68937-41-7 are on in the Candidate list (REACH). In France: The substances on the Candidate List are included in the AGEC legislation (LOI n° 2020-105).
Test method:	EN ISO 17881-2 (textiles) Test equipment (for non-textile materials): GC-MS, LC-MS, GC-ECD LOQ: 5 mg/kg

Formaldehyde

Required limit value:	<p>20 mg/kg for textiles and leather goods for children under the age of two.</p> <p>75 mg/kg for all clothing and related accessories, as well as textiles and leather goods that come into direct contact with the human skin to an extent similar to clothing.</p>
CAS RN:	50-00-0
Properties:	Carcinogenic, mutagenic, allergenic (skin sensitizer).
Use:	<p>Shrinkage-resistant treatment. Wrinkle-resistant treatment. Dirt-repellent treatment. Dye fixing agent. Preservative.</p> <p>Organic cross linkers are used in synthetic tanning of leather ("synthans") and may release formaldehyde.</p>
Comments:	<p>Occurs naturally in small quantities in the atmosphere and in nature. Use products without formaldehyde or with very low concentrations of formaldehyde.</p> <p>Due to its volatility, formaldehyde is "contagious". If a garment containing formaldehyde is placed on top of a garment without formaldehyde, the latter garment will be "infected".</p> <p>Fabric samples for testing must be packed in air dense plastic bags (polyethylene, PE, or polypropylene, PP).</p>

Legal background:

Formaldehyde has a restriction limit of 75 mg/kg in clothing, related accessories, textiles other than clothing in skin contact, or footwear according to Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 72. The restriction does not apply to clothing, related accessories, textiles other than clothing, or footwear within the scope of Regulation (EU) 2016/425 (PPE).

Formaldehyde and formaldehyde-releasing substances are restricted in furniture and wood-based articles (max release 0,062 mg/m³) as well as other articles (max release 0,080 mg/m³), according to Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 77.

Several countries have national legislation on formaldehydes, see Appendix 7.

German law (Bedarfsgegenständeverordnung and Chemikalien-Verbotsverordnung); Products with formaldehyde content shall be labelled. Cleaning and finishing agents shall not contain formaldehyde above 0.2%.

In California: Formaldehyde (gas) is listed in Proposition 65. Safe Harbor Limit: NSRL 40 µg/day.

Test method:

EN ISO 14184-1(textiles)
ISO 17226-1 (leather, HPLC analysis)
ISO 17226-2 (leather, colorimetric analysis)
ISO 17226-3 (leather, VOC analysis)
ISO 27587 (leather, process auxiliaries)

LOQ: 16 mg/kg

Lead (Pb) and lead salts

Required limit value:

Should not be present in textiles.

100 mg/kg for lead as a metal in plastic and metallic accessories.
1 mg/kg (extractable content) in clothing, related accessories, textiles other than clothing in skin contact, or footwear.

CAS RN:

Lead (metal): 7439-92-1

Properties:

Lead exposure can give rise to a number of negative health effects, including damage to liver, nervous system and fetuses. Lead is mainly accumulated in bone tissue. It has a very long half-life in the human body. Use of lead in plastics has not been deemed to cause any significant environmental or health effects in the short term, but in the long term such use increases lead concentrations in the environment.

Use:

Lead salts are additives in plastics as stabilizers to increase the service of life of the material. May be used as pigment in paint and in coloured plastic material. Metallic surface coating of buttons and accessories. For recycled packaging material lead may have had a different original use. Lead metal can also be used to increase ductility of other metals.

Comments:

Alternative stabilizers are barium/zinc, potassium/zinc, calcium or calcium/zinc organic stabilizers. Alternative catalysts can be organotinates or zirconate compounds (e.g. titanium 2-ethylhexanoate) or amines such as bis- (dimethylaminoethyl) ether (BDMAEE) and triethylenediamine (TEDA) and potassium acetate.

Legal background:

Lead and lead salts are on the Candidate list (REACH). SVHC lead compounds are listed in Appendix 6.

The sum of concentration levels of lead, cadmium, mercury and hexavalent chromium present in packaging or packaging components shall not exceed 100 ppm by weight

Directive (EC) No 94/62/EC of 20 December 1994 on packaging and packaging waste.

Lead salts are restricted in paint products (no restriction on painted articles) within the EU, entry 16 (lead carbonates) and 17 (lead sulphates). Lead and its compounds are restricted in jewellery articles and hair accessories within EU with a legal limit: 500 mg/kg (0.05%), entry 63. Lead and its compounds are restricted in articles that may be placed in the mouth by children with the legal limit 500 mg/kg (0.05%)⁴, entry 63. Annex XVII of Regulation (EC) No 1907/2006 (REACH).

Lead and its compounds have a restriction limit of 1 mg/kg (extractable content) in clothing, related accessories, textiles other than clothing in skin contact, or footwear according to Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 72. The restriction does not apply to clothing, related accessories, textiles other than clothing, or footwear within the scope of Regulation (EU) 2016/425 (PPE).

Lead is restricted in Denmark. Danish legal limits: 100 mg/kg. (Bekendgørelse nr. 856 af 5. September 2009 om forbud mod import og salg af produkter, der indeholder bly).

In France: The substances on the Candidate List are included in the AGECL legislation (LOI n° 2020-105).

In California: Lead and lead compounds are listed in Proposition 65. Safe Harbor Limit: NRSL lead acetate 23 µg/day (oral), lead 15 µg/day (oral), lead phosphate 58 µg/day (oral), lead subacetate 41 µg/day (oral), MADL lead 0.5 µg/day.

Test method:

EN 16711-1 (total content in textiles and accessories)
EN 16711-2 (extractable content in textile and accessories)
EN 16711-3 (lead release from all materials in textile articles)
ISO 17072-1 (extractable content in leather)
ISO 17072-2 (total content in leather)
ISO 19050 (rubber)

LOQ: 10 mg/kg (total content), 0.1 mg/kg (extractable content).

Test equipment: XRF screening for metal lead
LOQ: 50 mg/kg

⁴The limit does not apply if the rate of lead release is 0.05 µg/cm² per hour (equivalent to 0.05 µg/g/h) or lower. For coated articles, this release rate must not be exceeded for at least two years of use.

Mercury

Required limit value:	Should not be present in products.
CAS RN:	Mercury (metal): 7439-97-6 Phenylmercury neodecanoat: 26545-49-3 Phenylmercury octanoate: 13864-38-5 Phenylmercury 2-ethylhexanoate: 13302-00-6 Phenylmercury propionate: 103-27-5 Phenylmercury acetate: 62-38-4
Properties:	Heavy metal that occurs naturally in small quantities in nature. Toxic to aquatic organisms and non-biodegradable. Dangerous for the environment. Can cause kidney damage.
Use:	Phenylmercury compound are used as catalysts in the production of polyurethane coatings, adhesives, sealants and elastomers. For recycled packaging mercury may have had a different original use as e.g. pesticide in woods.
Legal background:	<p>Mercury compounds are restricted in impregnation of heavy-duty industrial textiles and yarn intended for their manufacture in Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 18. Phenyl mercury compounds are also restricted in entry 62 with a restriction limit of 0.01% = 100 mg/kg.</p> <p>Regulation (EU) 2017/852 of the European Parliament and of the Council of 17 May 2017 on mercury restricts the export, import, use, storage and manufacturing of mercury.</p> <p>Products containing mercury may not be placed on the Swedish market. Norway prohibits the manufacture, import, export and sale of articles that contain mercury or mercury compounds (0.001% (10 ppm). Denmark prohibits the import, export and sale of articles and part of articles that contain mercury or mercury compounds (0.01% (100 ppm). Mercury is under restriction globally through the Minamata Convention.</p> <p>The sum of concentration levels of lead, cadmium, mercury and hexavalent chromium present in packaging or packaging components shall not exceed 100 ppm by weight. Directive (EC) No 94/62/EC of 20 December 1994 on packaging and packaging waste. Mercury and its compounds are listed in the Rotterdam convention.</p> <p>In California: Mercury is listed in Proposition 65.</p>
Test method:	<p>EN 16711-1 (total content in textiles and accessories)) EN 16711-2 (extractable content in textiles and accessories)) ISO 17072-1 (extractable content in leather) ISO 17072-2 (total content in leather) ISO 19050 (rubber)</p> <p>LOQ: 10 mg/kg (total content), 0.02 mg/kg (extractable content). Test equipment: XRF screening for metal mercury. LOQ: 50 mg/kg</p>

Nickel (Ni), in accessories

Required limit value:	0.5 µg per cm ² and week for products intended to come into direct and prolonged contact with the skin. 0.2 µg per cm ² and week for piercing items.
CAS RN:	Nickel (metal): 7440-02-0
Properties:	Nickel is one of the most common substances that cause contact dermatitis. Highly allergenic (strong skin sensitizer).
Use:	Nickel is often used in stainless steel and other alloys used in clothing accessories such as zippers, buttons and rivets.
Comments:	Refrain from using nickel-treated metals or nickel-containing metal coatings.
Legal background:	Annex XVII of Regulation (EC) No 1907/2006 of the European Parliament and of the Council (REACH, entry 27). 0.5 µg per cm ² and week for products intended to come into direct and prolonged contact with the skin. 0.2 µg per cm ² and week for piercing items. Nickel release is limited (0.5 µg/cm ² per week) in PPE standard for metallic material in skin contact. In California: Metallic nickel is listed in Proposition 65.
Test method:	Test method I: EN 12472:2020 and EN 1811:2023 (for coated items) EN 1811:2023 (for non-coated item). EN 16128:2015 (spectacle frames and sunglasses) (CEN methods specified in REACH Annex XVII, entry 27) LOQ: 0.02 µg/cm ² /week Test method II (not for testing legal compliance): Screening test for nickel emission. Swedish pharmacies sell a test kit. Detection limit II: Qualitative indication only = no occurrence. (This screening method can also give a reading for other metals than Ni.)

PFAS - Highly fluorinated carboxylic acids (PFOA and related substances)

Required limit value:	Should not be present in products.
CAS RN:	Example: 335-67-1
Properties:	<p>Highly fluorinated carboxylic acids (PFCAs) such as PFOA are persistent, bioaccumulative and toxic (PBT) substances. Due to their extreme stability these chemicals will not degrade but will accumulate due to their persistency in the environment. PFCAs are water soluble and can contaminate drinking water. As a result of their long-range transport potential and mobility they can be found even in remote regions (e.g. the Arctic). PFOA can cause cancer (testicular and kidney cancer), liver damage and changes in immune- and endocrine system (e.g. cholesterol levels). Exposure to PFOA effects the foetus development during pregnancy and has adverse effects on breastfed infants (e.g. low birth weight). Other long chain fluorinated carboxylic acids are also classified as PBT substances. They can be as present as pure substances in products or as precursor chemicals (e.g. polymers) that form PFOA and other PFCAs due to transformation processes</p>
Use:	<p>PFOA-related substances (e.g. side-chain fluorinated polymers) are used in water oil repellent textile finishes as well as impregnation agents in leather. PFOA and other PFCAs are used as an emulsifier in the production of fluoropolymers such as polytetrafluoroethylene (PTFE) etc.</p>
Comments:	<p>Alternatives are technologies based on short chain fluorotelomer chemistry (< C7) and may only be used in applications where oil and stain repellent properties are essential such as protective occupational textiles when no other feasible alternatives are available.</p> <p>Where oil repellent properties are not essential and just water repellence is required, non-fluorinated chemistries (C0) such as waxes and paraffins but not silicones are recommended.</p>

Legal background:

Legal limit: Shall not occur.

PFOA, its salts and related compounds are listed in the Stockholm Convention on Persistent Organic Pollutants (POPs) and banned in EU by the POPs Regulation (EU) No 2019/1021. Residues below 0.025 mg/kg of each substance, and 1 mg/kg of a combination of PFOA-related substances in substances, mixtures, and articles are allowed to be placed on the market and used, as these are amounts that may be present as impurities. From 4 July 2023 the restriction applies to textiles for the protection of workers from dangerous liquids.

C9-C14 linear and/or branched perfluorocarboxylic acids (C9-C14 PFCAs), their salts and C9-C14 PFCAs-related substances, are restricted in articles (25 ppb) annex XVII Regulation (EC) No 1907/2006 (REACH), entry 68.

Perfluoroheptanoic acid and its salts as well as other PFCAs including their salts (sodium and ammonium) and precursors are on the Candidate list (REACH).

Examples of PFCAs are listed below:

- (C7) Ammonium perfluoroheptanoate, 6130-43-4
- (C7) Potassium perfluoroheptanoate, 21049-36-5
- (C7) Perfluoroheptanoic acid, 375-85-9
- (C7) Sodium perfluoroheptanoate, 20109-59-5
- (C8) Pentadecafluorooctanoic acid (PFOA) and its ammonium salt (APFO), 335-67-1, 3825-26-1,
- (C9) Perfluorononan-1-oic-acid (PFNA) and its sodium and ammonium salts, 375-95-1, 21049-39-8, 4149-60-4,
- (C10) Nonadecafluorodecanoic acid (PFDA) and its sodium and ammonium salts, 335-76-2, 3108-42-7, 3830-45-3,
- (C11) Henicosafuoroundecanoic acid (PFUnA), 2058-94-8,
- (C12) Tricosafuorododecanoic acid (PFDoA), 307-55-1,
- (C13) Pentacosafuorotridecanoic acid (PFTrDA), 72629-94-8,
- (C14) Heptacosafuorotetradecanoic acid (PFTA), 376-06-7,

(3,3,4,4,5,5,6,6,7,7,8,8,8-tridecafluorooctyl) silanetriol is restricted in spray products (2 ppb) annex XVII Regulation (EC) No 1907/2006 (REACH), entry 73.

Declaration duty in Sweden to the Swedish Chemicals Agency for PFAS in chemical products that are deliberately added. Composition needs not to be specified but the information duty applies without any concentration limit.

In France: The substances on the Candidate List are included in the AGECL legislation (LOI n° 2020-105).

In California: PFOA and perfluorononanoic acid (PFNA) and its salts are listed in Proposition 65.

Test method:

EN 17681-1, 2 (textile and textile products)

ISO 23702-1 (leather)

Test equipment: LC-MS

LOQ: 10 µg/kg

PFAS - Highly fluorinated sulfonic acids (PFOS and related substances)

Required limit value:	Should not be present in products.
CAS RN:	Example: 1763-23-1, 355-46-4, 29420-49-3, 220689-12-3
Properties:	<p>Highly fluorinated sulfonic acids (PFSAs) such as PFOS are persistent, bioaccumulative and toxic (PBT) substances. Due to their extreme stability these chemicals will not degrade but will accumulate due to their persistency in the environment. PFSAs are water soluble and can contaminate drinking water. As a result of their long-range transport potential and mobility they can be found even in remote regions (e.g. the Arctic). PFOS can cause cancer (testicular and kidney cancer), liver damage and changes in immune- and endocrine system (e.g. cholesterol levels). Exposure to PFOS effects the foetus development during pregnancy and has adverse effects on breastfed infants (e.g. low birth weight). Other long chain fluorinated carboxylic acids (see legal background) are also classified as PBT substances. Also PFBS (a short chain PFSAs) has been recently identified as a substance of concern. They can be as present as pure substances in products or as precursor chemicals (e.g. polymers) that form PFOS and other PFSAs due to transformation processes.</p>
Use:	<p>PFOS-related substances (e.g. side-chain fluorinated polymers) are used in water oil repellent textile finishes as well as impregnation agents in leather. PFOS other PFSAs are used as an emulsifier in the production of fluoropolymers such as polytetrafluoroethylene (PTFE) etc.</p> <p>Salts of PFBS are used as additives in plastics for anti-static properties, as flame retardants (in PC) and in manufacturing processes of plastics (e.g. for compounding).</p>
Comments:	<p>Alternatives are technologies based on short chain fluorotelomer chemistry (< C7) and should be used in applications where oil and stain repellent properties are essential such as protective occupational textiles.</p> <p>Where oil repellent properties are not essential and just water repellency is required, non-fluorinated chemistries (C0) such as waxes and paraffins but not silicones are requested.</p>

Legal background:

Legal limit: Shall not occur

PFOS and its derivatives are listed in the Stockholm Convention on Persistent Organic Pollutants (POPs) and banned in EU by the POPs Regulation (EU) No 2019/1021. Residues below the following limits are allowed to be placed on the market and used, as these are the amounts that may be present as impurity⁵:
textiles or other coated materials: 1 µg/m² of the coated material
substances and mixtures: ≤ 10 mg/kg (0.001 %)
semi-finished products or articles: ≤ 1000 mg/kg (0.1 %)

Perfluorohexane-1-sulphonic acid (PFHxS) and its salts and related substances are listed in the Stockholm Convention on Persistent Organic Pollutants (POPs) and banned in EU by the POPs Regulation (EU) No 2019/1021. Residues below 0.025 mg/kg by weight of each substance, and 1 mg/kg of a combination of PFHxS-related substances in substances, mixtures, and articles are allowed to be placed on the market and used, as these are amounts that may be present as impurities.

Perfluorobutane sulphonic acid (PFBS) and its salts, perfluorohexane-1-sulphonic acid (PFHxS) and its salts (PFHxS) are listed on the Candidate List (REACH).

In France: The substances on the Candidate List are included in the AGECE legislation (LOI n° 2020-105).

Declaration duty in Sweden from 1 January 2019 to the Swedish Chemicals Agency for PFAS in chemical products that are deliberately added. Composition needs not to be specified but the information duty applies without any concentration limit.

In California: Perfluorooctane sulfonic acid (PFOS) and its salts and transformation and degradation precursors are listed in Proposition 65.

Test method:

EN/TS 15968

EN 17681-1, 2 (textile and textile products)

ISO 23702-1 (leather and coated leather)

Test equipment: LC-MS

LOQ: 0.1 µg/m² (for coated textile and other coated articles).

⁵The total amount of PFOS and PFOS related substances counted as PFOS, see test method CEN/TS 15968:2009.

PFAS - Highly fluorinated ethers

Required limit value:	Should not be present in products.
CAS RN:	13252-13-6
Properties:	Highly fluorinated ethers (PFPEs) such as HFPO-DA (2,3,3,3-tetrafluoro-2-(heptafluoropropoxy)propionic acid) were developed as replacements for PFAO and PFOS. They are water-soluble and mobile surfactants that are under suspicion to be equally persistent as other PFASs. While the bioaccumulation potential of HFPO-DA is still uncertain, this substance has showed adverse effects on kidney, immune- and haematological system, as well as effects on foetus development in animal studies. Other PFPEs are likely to be equally stable and mobile.
Use:	PFPEs are used as emulsifiers in the production of fluoropolymers such as polytetrafluoroethylene (PTFE) etc.
Comments:	Non-fluorinated emulsifiers such as hydrocarbons should be preferred to produce fluoropolymers. Fluorinated emulsifiers may only be applied for essential uses.
Legal background:	<p>HFPO-DA, its salts and its acyl halides (CAS 13252-13-6, 67118-55-2, 2062-98-8 and 62037-80-3) are on the Candidate list (REACH).</p> <p>Declaration duty in Sweden from 1 January 2019 to the Swedish Chemicals Agency for PFAS in chemical products that are deliberately added. Composition needs not to be specified but the information duty applies without any concentration limit</p> <p>In France: The substances on the Candidate List are included in the AGECL legislation (LOI n° 2020-105).</p>
Test method:	<p>EN 17681-1, 2 (textile and textile products)</p> <p>Test equipment: LC-MS</p> <p>LOQ: -</p>

Phthalate esters

Required limit value:	0.1% by weight (1000 mg/kg) for regulated phthalates (sum of) in the material of interest (e.g. a print).
CAS RN:	Regulated phthalates are found in Appendix 8.
Properties:	Many phthalates are classified as toxic for reproduction. DIDP is of concern in connection with hepatic toxicity. Many phthalates are suspected endocrine disruptors
Use:	Phthalates may be used as plasticizers in polymers. Additives in adhesives, paints, lacquers, varnishes and solvents.
Comments:	Alternative plasticizers include citrates, sebacates, adipates, and phosphates etc. The terephthalate, DEHT and the cyclohexane DINCH are example of commercially available alternatives with low human and environmental toxicity. There are also polymers that do not require plasticizers. However, each application needs to be individually assessed for each best specific technical performance.

Legal background:

Annex XVII of Regulation (EC) No 1907/2006 of the European Parliament and of the Council (REACH) addresses the following legal limits:

0.1% by weight of the plasticized material in all articles for the sum of DEHP, DBP, BBP and DIBP, entry 51.

0.1% by weight in toys and childcare articles which can be placed in the mouth for DINP, DIDP and DNOP, entry 52.

DIHP, DMEP, DIPP, DPP and DnHP have a restriction limit of 1000 mg/kg in clothing, related accessories, textiles other than clothing in skin contact, or footwear according to Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 72. This limit applies to each substance individually or in combination with other phthalates that are classified as CMR substances. The restriction does not apply to clothing, related accessories, textiles other than clothing, or footwear within the scope of Regulation (EU) 2016/425 (PPE).

Phthalate ester substances listed in found in Annex XIV, the Candidate list (REACH) and/or the French AGECE legislation (LOI n° 2020-105) in Appendix 8.

All phthalates in toys and childcare articles for children aged 0-3 years are restricted (0.05%) in Denmark (BEK nr 855).

In California: BBP, DINP, DEHP, DBP, DnHP and DIDP are listed in Proposition 65. Safe Harbor Limits:

NSRL BBP 1200 µg/day (oral), NSRL DINP 146 µg/day.

NSRL DEHP 310 µg/day (oral), MADL DBP 8.7 µg/day, MADL DnHP 2200 µg/day (oral), MADL DIDP 2200 µg/day.

Test method:

EN-ISO 14389 (textile)
ISO 16181 -1, -2 (footwear)

Test equipment: GC-MS, LC-MS
LOQ: 50 mg/kg

Siloxanes

Required limit value:	1000 mg/kg (0.1% by weight).
CAS RN:	556-67-2 Octamethylcyclotetrasiloxane (D4) 541-02-6 Decamethylcyclopentasiloxane (D5) 540-97-6 Dodecamethylcyclohexasiloxane (D6)
Properties:	Reproduction toxic. Toxic to aquatic life with long lasting effects.
Use:	Used in washing and cleaning products such as softeners, polishes and waxes, cosmetics and personal care products, textile treatment products and dyes, paper and cardboard products. Precursors in the production of polymers such as silicone rubbers.
Comments:	Alternatives to siloxane-based softeners are available but must be evaluated.
Legal background:	D4, D5 and D6 are on the Candidate list (REACH). In France: The substances on the Candidate List are included in the AGECE legislation (LOI n° 2020-105).
Test method:	No standardised test methods. Test equipment: GC-MS. LOQ: 100 mg/kg

BIOCIDAL AGENTS

General information

Biocidal agents are both used as process chemicals to prohibit growth of microbes during production and as product related chemicals to render biocidal property to the article.

The use of biocidal products in articles should be kept limited, for instance to avoid the increase of resistant bacteria. If the use of biocidal agents is essential, there are biocidal agents approved for PT9 (product type 9, that includes textiles, polymers and leather) according to the Biocidal Product Regulation (EU 528/2012).

Cu-HDO (Bis-(N-cyclohexyldiazoniumdioxo) –copper)

Required limit value:	Should not be present in products.
CAS RN:	312600-89-8
Properties:	Fungicide. Cu-HDO is classified as very toxic to aquatic organisms.
Use:	Fungicide mainly as wood preservatives, but may occur in fungicidal coating of textile-polymeric materials.
Comments:	<p>The alternative to biocidal agents during storage and transport is a cool and dry environment.</p> <p>If use of biocidal agents is essential, folpet, chlorocresol, propiconazole, azoxystrobin and fludioxonil are approved for PT9 according to the Biocidal Product Regulation (EU 528/2012).</p>
Legal background:	Cu-HDO is banned within PT9 (product type 9) that includes textiles, polymers and leather, according to the Biocidal Product Regulation (EU 528/2012)
Test method:	<p>No standardised test method available.</p> <p>Test equipment: ICP-AES</p> <p>LOQ: -</p>

Carbendazim

Required limit value:	Should not be present in products.
CAS RN:	10605-21-7
Properties:	Fungicide. Reproduction toxic, mutagenic and toxic to aquatic life with long lasting effects and processes.
Use:	To counteract fungus growth in clothes, shoes and other leather items.
Comments:	The alternative to biocidal agents during storage and transport is cool and dry environment. If use of biocidal agents is essential, folpet, chlorocresol, propiconazole, azoxystrobin and fludioxonil are approved for PT9 according to the Biocidal Product Regulation (EU 528/2012).
Legal background:	Carbendazim is banned within PT9 (product type 9) that includes textiles, polymers and leather, according to the Biocidal Product Regulation (EU 528/2012).
Test method:	No standardised test method available. Test equipment: GC-MS, LC-MS. LOQ: -

Dimetylfumarate (DMFu)

Required limit value:	Should not be present in products.
CAS RN:	624-49-7
Properties:	Fungicide. DMFu is harmful to skin and a strongly allergenic (skin sensitizer).
Use:	To counteract fungus growth in clothes, shoes and other leather items. DMFu can e.g. be found in silica gel bags, but is also applied on the product both as a powder and in tablet form.
Comments:	<p>The alternative to biocidal agents during storage and transport is cool and dry environment.</p> <p>If use of biocidal agents is essential, folpet, chlorocresol, propiconazole, azoxystrobin and fludioxonil are approved for PT9 according to the Biocidal Product Regulation (EU 528/2012).</p>
Legal background:	Legal limit: 0.00001% by weight (0.1 mg/kg) in articles or any parts thereof. Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 61.
Test method:	<p>ISO/TS 16186 (footwear) SS-EN 17130 (textile and textile material)</p> <p>Test equipment: GC-MS, LC-MS LOQ: 0.1 mg/kg.</p>

Glutaral

Required limit value:	Should not be present in products.
CAS RN:	111-30-8
Properties:	Allergenic (Respiratory and skin sensitizer) and toxic.
Use:	Used in leather processing as biocide and as component for tanning agents. Also, for crease resistance (cross-linker) in cellulosic materials.
Comments:	The alternative to biocidal agents during storage and transport is cool and dry environment. Make sure that residues levels from production are kept as low as possible.
Legal background:	<p>Glutaral is on the Candidate list (REACH).</p> <p>In France: The substances on the Candidate List are included in the AGECE legislation (LOI n° 2020-105).</p>
Test method:	<p>No standardised test method available.</p> <p>Test equipment: LC-UV, GC-UV</p> <p>LOQ: -</p>

Guanidine, N,N'''-1,6-hexanediylbis[N'-cyano-, polymer with 1,6-hexanediamine, hydrochloride (PHMB)

Required limit value:	Should not be present in products.
CAS RN:	27083-27-8, 32289-58-0, 1802181-67-4
Properties:	Bactericide. PHMB is very toxic to aquatic life, is suspected of causing cancer and may cause an allergic skin reaction (skin sensitizer).
Use:	Biocide, bactericide in textiles.
Comments:	The alternative to biocidal agents during storage and transport is a cool and dry environment.
Legal background:	PHMB is banned within PT9 (product type 9) that includes textiles, polymers and leather, according to the Biocidal Product Regulation (EU 528/2012).
Test method:	No standardised test method available. Test equipment: LC-MS LOQ: -

Parabenes

Required limit value:	Should not be used in processes or present in products.
CAS RN:	Various, including: Butyl 4-hydroxybenzoate (Butylparaben), 94-26-8 Isobutyl 4-hydroxybenzoate, 4247-02-3
Properties:	Toxic for reproduction.
Use:	Bactericide. Used in cosmetic products and detergents.
Comments:	The alternative to biocidal agents during storage and transport is a cool and dry environment.
Legal background:	Butyl 4-hydroxybenzoate (Butylparaben) and Isobutyl 4-hydroxybenzoate are on the Candidate list (REACH). In France: The substances on the Candidate List are included in the AGECE legislation (LOI n° 2020-105).
Test method:	No standardised test method available for textiles or leather. Test equipment: GC-MS, LC-MS. LOQ: 100 mg/kg

Pentachlorophenol (PCP) and all isomers of Tetrachlorophenols (TeCP)

Required limit value:	Should not be present in products.
CAS RN:	87-86-5 (PCP), 131-52-2 (PCP sodium salt), 935-95-5, 4901-51-3, 58-90-2 (the three isomers of TeCP)
Properties:	Fungicide. Organic compounds. Toxic and dangerous for the environment. On combustion, PCP emits dioxins, which are extremely toxic to humans.
Use:	<p>Fungicide for preservative treatment of goods prior to storage and transport.</p> <p>Preservative in sizing agents and adhesives. Component in printing pastes (thickener).</p>
Comments:	<p>The alternative to biocidal agents during storage and transport is cool and dry environment.</p> <p>If use of biocidal agents is essential, folpet, chlorocresol, propiconazole, azoxystrobin and fludioxonil are approved for PT9 according to the Biocidal Product Regulation (EU 528/2012).</p>
Legal background:	<p>Legal limit: PCP and its salts and esters shall not occur. Pentachlorophenol and its salts and esters are listed in the Stockholm Convention on Persistent Organic Pollutants (POPs) and banned in EU by the POPs Regulation (EU) No 2019/1021. Residues below 5 mg/kg in substances, mixtures, and articles are allowed to be placed on the market and used, as this is the amount that may be present as an impurity in an article.</p> <p>Pentachlorophenol is listed in the Rotterdam convention.</p> <p>In California: PCP is listed in Proposition 65. Safe Harbor Limit: NRSL 40 µg/day.</p>
Test method:	<p>EN 17134-2 (textile)</p> <p>ISO 17070 (leather)</p> <p>XP G 08-015 (French standard method for PCP in textiles).</p> <p>LOQ: 0.1 mg/kg</p> <p>CEN/TR 14823 (wood). Detection limit 25 mg/kg</p> <p>EN ISO 15320 (Pulp, paper and board)</p>

Permethrin

Required limit value:	Should not be present in products.
CAS RN:	52645-53-1
Properties:	Insecticide. Permethrin is like all synthetic pyrethroids a neurotoxin. It is considered more acutely toxic to children than to adults. Allergenic (skin sensitizer).
Use:	Permethrin is a biocide in textiles and leather.
Comments:	The alternative to biocidal agents during storage and transport is cool and dry environment.
Legal background:	Permethrin is not on the active substance list for product-type 9 and thus not allowed to use in textiles, polymers and leather according to the Biocidal Product Regulation (EU 528/2012).
Test method:	No standardised test method available for textile. EN ISO 22517 (pesticide residues in leather) Test equipment: GC-MS, LC-MS. LOQ: 5 mg/kg

Silver and its compounds

Required limit value:	Should not be present in products.
CAS RN:	Silver (metal): 7440-22-4
Properties:	<p>Bactericide. Slight skin and eye irritant. Disturb denitrification processes in nature that is vital for provision of nutrients to plants.</p> <p>Dissolved (free) silver ions are very toxic to aquatic organisms.</p>
Use:	Silver nano particle complexes are antibiotic additives in plastics and fibres.
Comments:	The alternative to antibacterial agents during use is satisfactory washing.
Legal background:	<p>Legal limit: No legal limits for silver compounds exist in textiles and leather.</p> <p>Some silver compounds are on the list of temporarily permitted existing biocides within PT9 (product type 9) that includes textiles, polymers and leather, according to the Biocidal Product Regulation (EU 528/2012).</p> <p>Silver as such, silver as a nanomaterial (CAS RN 7440-22-4) and as reaction mass of titanium dioxide and silver chloride are not allowed as a biocidal active substance.</p>
Test method:	<p>No standardised test method available.</p> <p>Test equipment: ICP-MS, ICP-OES or AAS. LOQ: 10 mg/kg</p>

Trisubstituted tin organic compounds

Required limit value:	Should not be present in products.
CAS RN:	Tributyltin chloride: 1461-22-9 Tributyltin fluoride: 1983-10-4 Tributyltin methacrylate: 2155-70-6 Tributyltin benzoate: 4342-36-3 Tributyltin linoleate: 24124-25-2 Tributyltin naphthenate: 85409-17-2
Properties:	Bactericides. Tributyltin compounds are different chemical substances that are toxic and dangerous for the environment. Bioaccumulative and persistent.
Use in textile and leather:	Antibacterial agent to counteract noxious odours in clothes and shoes. Preservative, fungicide and antifouling agent.
Comments:	<p>The alternative to antibacterial agents during use is satisfactory washing.</p> <p>If use of biocidal agents is essential, folpet, chlorocresol, propiconazole, azoxystrobin and fludioxonil are approved for PT9 according to the Biocidal Product Regulation (EU 528/2012).</p>
Legal background:	<p>Legal Limit: 0.1% by weight.</p> <p>All tri-substituted organostannic compounds such as tributyltin (TBT) are restricted in articles in annex XVII of the Regulation (EC) No 1907/2006 (REACH), entry 20.</p> <p>The seven TBT compounds listed above are also included in the Rotterdam convention.</p> <p>Tributyltin oxide (TBTO) 56-35-9 and Dibutyltin dichloride (DBTC), 683-18-1 are listed on the Candidate list (REACH).</p> <p>In France: The substances on the Candidate List are included in the AGECL legislation (LOI n° 2020-105).</p>
Test method:	<p>EN ISO 22744-1, -2 (textiles) ISO/TS 16179 Test equipment: GC-MS.</p> <p>LOQ: 0.2 mg/kg</p>

Triclosan and Triclocarban

Required limit value:	Should not be present in products.
CAS RN:	Triclosan: 3380-34-5, Triclocarban: 101-20-2
Properties:	Bactericides. Triclosan is classified as a probable human carcinogen and bio accumulative.
Use:	Antibacterial agent in clothes and other commodities.
Comments:	The alternative to antibacterial agents during use is satisfactory washing.
Legal background:	<p>Triclosan is banned within PT9 (product type 9) that includes textiles, polymers and leather, according to the Biocidal Product Regulation 528/2012.</p> <p>Triclocarban is not on the active substance list for PT9 and thus not allowed to use in textiles, polymers and leather.</p>
Test method:	<p>ISO 22992-2 (textile). EN 17134 (textile).</p> <p>Test equipment: GC-MS, LC-MS. LOQ: 10 mg/kg</p>

Zincpyrithion

Required limit value:	Should not be present in products.
CAS RN:	13463-41-7
Properties:	Bactericide, fungicide and algicide. Toxic to Reproduction
Use:	Antibacterial and fungicide agent in articles. Commonly used in schampoo and previously in antifouling paint. May be used in plastic articles
Comments:	<p>The alternative to antibacterial agents during use is satisfactory washing.</p> <p>If use of biocidal agents is essential, folpet, chlorocresol, propiconazole, azoxystrobin and fludioxonil are approved for PT9 according to the Biocidal Product Regulation (EU 528/2012).</p>
Legal background:	Zincpyrithion is on the list of temporarily permitted existing biocides within PT9 (product type 9) that includes textiles, polymers and leather, according to the Biocidal Product Regulation (EU 528/2012).
Test method:	<p>No standardised test method available.</p> <p>Test equipment: GC-MS, LC-MS.</p> <p>LOQ: 1000 mg/kg (100 mg/kg via Zinc)</p>

MISCELLANEOUS

pH

Limit value textiles:	4.0 – 7.5 Protective clothing material (PPE) standard limits the pH value to greater than pH=3,5 and less than pH=9.5
Limit value leather:	3.5 – 7.0 Protective clothing material (PPE) standard limits the pH value to greater than pH=3,5 and less than pH=9.5
Properties:	A pH higher than 10 or lower than 3 can cause skin irritation.
Comments textiles:	The pH value can easily be corrected by washing.
Legal background:	None
Test method textiles:	ISO 3071
Test equipment:	pH meter. Accuracy: 0.2 pH units.
Test method leather:	EN ISO 4045
Test equipment:	pH meter. Accuracy: 0.2 pH units.

Synthetic polymer microparticles

Limit value:	Shall not be placed on market.
Comments textiles:	Microfiber release from the synthetic textile material itself is out of scope (unintentional release). Glitter bonded in garments and shoes, or sequins and beads that are sewn onto an article is also out of scope. Decorative items such as party/toy hats, Christmas decorations, craft items are covered by the restriction.
Legal background:	Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 78
Test method:	No standardised test method available.

Proposition 65 in California: Other chemicals listed

There are chemicals listed in Proposition 65 that are relevant to the materials addressed in this Chemicals guidance, but that are not otherwise included in this document. Those substances are listed in the table below. Please, note that Proposition 65 is a Californian legislation that does not apply in Europe.

Chemicals related to dyes

Substance name	CAS RN	Comment
Aniline	62-53-3	NSRL: 100 µg/day
Benzyl violet 4B	1694-09-3	NSRL: 30 µg/day
2-Bromopropane	75-26-3	No Safe Harbor Limit
Carbon black (airborne, unbound particles of respirable size)	1333-86-4	No Safe Harbor Limit
C.I. Acid Red 114	6459-94-5	No Safe Harbor Limit
C.I. Direct Blue 15	2429-74-5	No Safe Harbor Limit
Cobalt sulfate	10124-43-3	No Safe Harbor Limit
Ethylene dichloride (1,2-Dichloroethane)	107-06-2	NSRL: 10 µg/day
Ethylene oxide	75-21-8	NSRL: 2 µg/day MADL: 20 µg/day
Leucomalachite green	129-73-7	No Safe Harbor Limit
Michler's ketone	90-94-8	NSRL: 0.8 µg/day
Naphthalene	91-20-3	NSRL: 5.8 µg/day
1,3-Propane sultone	1120-71-4	NSRL: 0.3 µg/day
Trypan blue (commercial grade)	72-57-1	No Safe Harbor Limit
Hexachlorobenzene	118-74-1	NSRL: 0.4 µg/day

Chemicals related to materials

Substance name	CAS RN	Comment
Antimony oxide (Antimony trioxide)	1309-64-4	Polyester catalyst No Safe Harbor Limit
1-Butyl glycidyl ether	2426-08-6	Paints, coatings and adhesives No Safe Harbor Limit
Dichloromethane (Methylene chloride)	75-09-2	Triacetate (NSRL): 50 µg/day NSRL- Inhalation: 200 µg/day
Glycidyl methacrylate	106-91-2	Epoxy resins and adhesives No Safe Harbor Limit
N-Nitrosodimethylamine	62-75-9	Rubber NSRL: 0.04 µg/day
1,1,1-Trichloroethane	71-55-6	Solvent for various materials No Safe Harbor Limit

Biocides (Proposition 65 in California)

Substance name	CAS RN	Comment
Metham sodium	137-42-8	No Safe Harbor Limit
o-Phenylphenate, sodium	132-27-4	NSRL: 200 µg/day
o-Phenylphenol	90-43-7	No Safe Harbor Limit
2,4,6-Trichlorophenol	88-06-2	NSRL: 10 µg/day
Methyl bromide, as a structural fumigant	74-83-9	MADL - Inhalation: 810 µg/day

Flame retardants (Proposition 65 in California)

Substance name	CAS RN	Comment
Dimethyl hydrogen phosphite	868-85-9	No Safe Harbor Limit
Tris(1,3-dichloro-2-propyl) phosphate (TDCPP)	13674-87-8	NSRL: 5.4 µg/day
Vinyl bromide	593-60-2	No Safe Harbor Limit

Obsolete substances: Historically relevant substances, no longer in use.

Flame retardants

Substance name	CAS RN	Comment
Tris(1-aziridinyl)-phosphine oxide (TEPA)	545-55-1	Legal limit: Shall not be used Test method: GC-MS
Tris(2,3-dibromopropyl)phosphate (TBPP)	126-72-7	Legal limit: Shall not be used Test method: EN ISO 17881-2 (textile); GC-MS, LC-MS, GC-ECD, LOQ: 5 mg/kg (non-textile)

APPENDICES

Appendix 1

Allergenic dye stuffs and Navy Blue (banned mordant dye)

Appendix 2

Banned arylamines

Appendix 3

Carcinogenic dye stuffs

Appendix 5

Chromium (VI) SVHC compounds

Table of contents

PREFACE	5
EXPLANATORY SECTION	6
PROCESS CHEMICALS	10
Alkylphenol ethoxylates (APEO) and derivatives	10
Bisphenols	12
C, C'-azodi(formamide) (ADCA)	13
Ethylenethiourea	14
Ethylenediamine (EDA)	15
Formaldehyde	16
Formamide	17
Fluorinated Greenhouse gases	18
Hexahydrophthalic anhydrides (HHPA and MHHPA)	19
Hydrazine	20
Imidazoles	21
4,4'- Diaminodiphenylmethane (MDA)	22
2,2'-dichloro-4,4'-methylenedianiline (MOCA)	23
Michler's ketone	24
Melamine	25
Ozone depleting substances	26
PAH - Polycyclic aromatic hydrocarbons	27
Photo-initiators	28
PFAS - Highly fluorinated sulphonic acids (PFOS and related substances)	29
PFAS - Highly fluorinated ethers	31
Solvents	32
Aromatic organic solvents	32
Aliphatic organic solvents	33
Aprotic solvents	34
Chlorinated organic solvents	37
TGIC and β -TGIC	39

Tin organic compounds (Organostannic compounds)	40
Trimellitic anhydride (TMA)	42
PRODUCT-RELATED (PROPERTY-LENDING) CHEMICALS	43
Arsenic compounds	43
Asbestos	44
Bis(4-chlorophenyl) sulfone (BCPS)	45
Cadmium (Cd) and cadmium salts	46
Chromium VI compounds	48
Cobalt and cobalt (II) compounds	50
EGDME, DEGDME and TEGDME	51
Flame retardants/Biocides - Boric acid, and related boron compounds	52
Flame retardants - Chloroorganic phosphates (TCEP, TCPP, TDCPP/TDCP)	53
Flame retardants/Plasticizers - Chloroparaffins	54
Flame retardants - Dechlorane TM Plus	55
Flame retardants - Hexabromocyclododecan (HBCDD)	56
Flame retardants – Polybrominated biphenyls (PBB) and Polybrominated diphenyl ethers (PBDE)	57
Flame retardants – Tetrabromobisphenol A, TBBPA	59
Flame retardants / Plasticizers – Trisubstituted phosphates	60
Flame retardants – Other halogenated flame retardants	61
Gold	63
Lead (Pb) and lead salts	64
Mercury	67
Nickel (Ni) in skin contact	69
Perchlorates	70
PFAS - Highly fluorinated carboxylic acids (PFOA and related substances)	71
Phthalate esters	73
1,3-propanesultone	75
Siloxanes	76
Tantalum	77

Tin	78
Tungsten	79
UV stabilisers	80
BIOCIDAL AGENTS	81
General information	81
Cu-HDO (Bis-(N-cyclohexyldiazeniumdioxy) –copper)	81
Carbendazim	82
Dimethylfumarate (DMFu)	83
Guanidine, N,N'''-1,6-hexanediylbis[N'-cyano-, polymer with 1,6-hexanediamine, hydrochloride (PHMB)	84
Pentachlorophenol (PCP) and all isomers of Tetrachlorophenols (TeCP)	85
Permethrin	86
Silver and its compounds	87
Tri-substituted organostannic compounds	88
Triclosan and Triclocarban	89
Zincpyrithion	90
MISCELLANEOUS	91
Synthetic polymer microparticles	91
Proposition 65 in California: Other chemicals listed	91
APPENDIX 1 – EXEMPTIONS IN ROHS	93
APPENDIX 3 – CHROMIUM (VI) SVHC COMPOUNDS	97
APPENDIX 4 – SVHC LEAD AND LEAD COMPOUNDS	98
APPENDIX 5 – GREENHOUSE GASES	99
APPENDIX 6 –PAH – POLYCYCLIC AROMATIC HYDROCARBONS	100
APPENDIX 7 – HALOGEN FREE/LOW HALOGEN INDUSTRY STANDARDS	101
APPENDIX 8 - PHTHALATE ESTERS	102

PREFACE

This guide is developed for the members of the Swedish Chemicals Group to facilitate for importing companies to comply with national and EU chemical legislation and recommendations in the fields electric and electronic equipment.

Many chemicals used throughout the manufacturing chain can be harmful for the environment, factory workers and consumers. Therefore, an increasing number of chemicals are being restricted and all importers and distributors are responsible for the articles they put on the EU market.

This guide has been put together by a team of experts at RISE and is updated twice per year. The guide covers EU regulated chemical substances affecting electric and electronic equipment as well as national legislation in Europe. In addition, some restrictions from other countries have been added.

The distinguishing properties of the chemicals of concern and the processes in which they are used are described in the guide. Stipulated test equipment for analysis of restricted substances in products is given when available.

The guide is provided in english and chinese that can be accessed through the Chemical group's website. To facilitate communication, the contents on each page are identical in each linguistic version. The English version of this guide is preferential for interpretation.

EXPLANATORY SECTION

Word list

Required limit value:	Limit value as agreed in business sector and or by legal requirements. Note that limit value is measured in product. Weight percent shall be calculated from the weight of the material if nothing else is stated.
CAS RN:	Chemical abstract services registration number. CAS RNs are given for specific defined substances.
Properties:	Human toxicological and eco toxicological properties.
Use:	Identified uses on the market.
Comments:	Information on known alternatives and recommendations on how to avoid unwanted chemicals.
Legal background:	Current legal EU and national European frameworks and requirements.
Candidate list:	Substances listed on Candidate List of Substances of Very High Concern for authorization of the Regulation (EC) No 1907/2006 (REACH) are referred to as SVHC. These substances are covered by an information duty if the concentration is 0.1 weight-% (1000 mg/kg) or above in an article. Candidate list substances are also included in the French AGECE legislation (LOI n° 2020-105) implying additional information requirements (same concentration limit).
Test method:	Standardized test method if such exists. ISO/EN standards are prioritized over national or commercial standards. Test equipment if no standardized test method exists. Abbreviations of recommended test equipment are explained below. All substances in a chemical group may not be legally regulated, but still included as a chemical group in this guide. As it can distinguish between different laboratories which substances besides the legal restricted, they offer test for, this should be confirmed before ordering
Detection limit:	Limit of detection (LOD). Lowest concentration the test equipment is able to detect. This can vary between different test laboratories. Note that detection limit is not relevant as required limit values for all substances as the background concentrations can be notably higher
MADL	Maximum Allowable Dose Levels. Safe harbor levels for chemicals causing reproductive toxicity in Proposition 65, in California.
NSRL:	No Significant Risk Levels. Safe harbor levels for cancer-causing chemicals in Proposition 65, in California.
Quantification limit:	Limit of quantification (LOQ). The smallest concentration of an analyte that can be reliably measured by an analytical procedure.
Packaging material:	According to Directive (EC) No 94/62/EC of 20 December 1994 on packaging and packaging waste. The directive regulates substances in packaging material; meaning all

POP

products made of any materials of any nature to be used for the containment, protection, handling, delivery and presentation of goods, from raw materials to processed goods, from the producer to the user or the consumer.

Persistent Organic Pollutants (POPs) are organic chemical substances, which remain intact in the environment for exceptionally long periods of time.

Test equipment abbreviations

ANALYSES OF ORGANIC COMPOUNDS

- **Gas chromatography: GC**

Detectors used together with GC:

- MS: Mass selective detector: GC-MS
- DAD: Diode array detector: GC-DAD
- ECD: Electron capture detector: GC-ECD

- **Liquid chromatography: LC**

Note: Sometimes the abbreviation HPLC is used. It stands for High Performance Liquid Chromatography.

Detectors used together with LC:

- MS: Mass selective detector: LC-MS
- DAD: Diode array detector: LC-DAD
- ECD: Electron capture detector: LC-ECD
- UV/VIS: Ultraviolet/visible spectrophotometric detector: LC-UV/VIS

ANALYSES OF METALS

- **Inductively Coupled Plasma Spectrometry: ICP**

Detectors together with ICP:

- OES: Optical emission spectrometer: ICP-OES
- MS: Mass selective detector: ICP-MS

- **Atomic absorption spectrophotometer: AAS**

SCREENING ANALYSES OF ELEMENTS

- **X-ray fluorescence, XRF**

Relationship between units used in the guide

1000	mg/kg	equals	1000	ppm	(parts per million)
1000	mg/kg	equals	1 000 000	ppb	(parts per billion)
1000	mg/kg	equals	1 000 000	µg/kg	(microgram per kilogram)
1000	mg/kg	equals	0.1	% (by weight)	
			x	µg/cm ² /week	x is a measure of the release of a substance from a surface, and is only partially dependent on the concentration of the substance

Product and material categories concerned

All chemicals are not used in all materials. A general division into the categories listed below has therefore been made that may be applicable to several kinds of articles due to their material composition

				
Printed wiring board Materials used in components, epoxy boards (PCBs) etc	Metal Metals and metal alloys	Plastics Material made of polymers, like plastics and rubber	Batteries	Packaging Paper cardboard, plastic bags, tags, labels, etc.

PROCESS CHEMICALS

Process chemicals are used in the manufacturing process but have no function in the finished product. Remains of the process chemicals may however be found in the finished product and cause health or environmental problems.

Alkylphenol ethoxylates (APEO) and derivatives

The most common APEOs are Nonylphenol ethoxylates (NPEO) and Octylphenol ethoxylates (OPEO).

Required limit value:	Should not be used in processes. Occurrence in products below 100 mg/kg (0.01%) for total APEO is regarded as unintended residues (contaminants) which cannot be controlled.
CAS RN:	Various
Properties:	Irritating to skin. The metabolites affect the respiratory system, have endocrine disruptive effect (hormones) and are dangerous for the environment. Nonylphenol ethoxylates are rapidly degraded to 4-nonylphenol, which is even more dangerous for the environment. A similar environmental danger is the degradation of octylphenol ethoxylate into 4-octylphenol.
Use:	APEO is present in corrosion protective agents, scouring and lubricating agents, cooling and lubricating agents for metal tooling. May be used in paints, lacquers and varnishes in concentrations up to 10% w/w of the mixture. Commercial nonylphenol is used in the production of phenol/formaldehyde resins, plastics, stabilisers, as a catalyst in the curing of epoxy resins (4-Nonylphenol, branched and linear). Octylphenol may still be used (as an antioxidant) in some older formulations of stabilizers for PVC cable jacketing. 4-tert-Octylphenol 140-66-9 may be used as rubber additives.
Comments:	The main alternatives for NPEOs include aliphatic alcohol ethoxylates, both linear and branched, and glucose-based carbohydrate derivatives such as alkylpolyglucoside, glucamides, and glucamine oxides. Note that in this group of alternatives, there might be substances having human and environmental aspects (some branched aliphatic alcohols may be toxic and amine containing substances (like glucamine oxides) may form nitrosamines under certain process conditions).
Legal background:	Legal limit: 0.1% by weight for nonylphenol ethoxylate (NPEO) as a substance or constituent of preparations (closed systems exempted). Annex XVII of Regulation (EC) No 1907/2006 of the European Parliament and of the Council (REACH), entry 46.

Norway restricts manufacture, import, export, sale and use of octylphenol and octylphenol ethoxylates, and mixtures containing these substances, FOR 2004-06- 01-922.

4-Nonylphenol, branched and linear (4-NP, various CAS RN), 4-Nonylphenol, branched and linear, ethoxylated, ethoxylated (4-NPnEO, various CAS RN), 4-(1,1,3,3-tetramethylbutyl)phenol, (4-tert-octylphenol CAS 140-66-9), 4-(1,1,3,3-tetramethylbutyl)phenol, ethoxylated (4-tert-OPnEO, UVCB substance, no CAS RN), 4-tert-butylphenol (CAS RN 98-54-4) and tris(4-nonylphenyl, branched and linear) phosphite (TNPP) with = 0.1% w/w of 4-nonylphenol, branched and linear (4-NP) (no CAS RN)) are listed on the Candidate List (REACH).

In France: The substances on the Candidate List as well as 4-tert-pentylphenol (CAS RN 80-46-6), 4-heptylphenol, branched and linear (e.g. CAS RN 1987-50-4), and Reaction products of 1,3,4-thiadiazolidine-2,5-dithione, formaldehyde and 4-heptylphenol, trendy and linear (RP-HP) [with ≥ 0.1 % w/w 4-heptylphenol, branched and linear] are included under the AGECE legislation (LOI n° 2020-105).

Several AP and APEO are also included in Annex XIV to REACH.

Test method:

No standardised test method available.

Test equipment: LC-MS, LC-DAD
LOQ: 10 mg/kg

Bisphenols

Required limit value:

Should not present in products.

CAS RN:

Bisphenol A; BPA (4,4'-isopropylidenediphenol): 80-05-7
2,2-bis(4'-hydroxyphenyl)-4-methylpentane: 6807-17-6
Bisphenol B; (4,4'-(1-methylpropylidene)bisphenol): 77-40-7
Bisphenol S; (4,4'-sulphonyldiphenol): 80-09-1

Properties:

Toxic for reproduction. Endocrine disrupting properties

Use:

Mainly used in manufacture of polycarbonate epoxy resins and chemicals. Also as; hardener in epoxy resins and thermal prints. May be used as catalyst and anti-oxidant for processing PVC.

Comments:

Left as residues in polycarbonate and epoxy. Bisphenols can be found in products with material based on plastic and paper.

Legal background:

BPA, Bisphenol B, Bisphenol S and 2,2-bis(4'-hydroxyphenyl)-4-methylpentane are listed on the Candidate List (REACH).

Bisphenol A (BPA) content in thermal paper (0.02w%), is restricted according to Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 66.

Canadian medical equipment legislation: Declare if manufactured from raw materials using BPA or derived of BPA and if used in medical devices and part that comes into contact with patient or patient fluids (e.g., via intravenous, inhalation, oral exposure, contact with skin, or as an implant).

In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).

In California: BPA and BPS are listed in Proposition 65. Safe Harbor Limit for BPA: MADL 3 µg/day (dermal exposure from solid materials).

Test method:

No standardised test method available.

Test equipment LC-MS, GC-MS.
LOQ: 10 mg/kg

C, C'-azodi(formamide) (ADCA)

Required limit value:	Should not be used in processes or present in products.
CAS RN:	123-77-3
Properties:	Allergenic (respiratory sensitizer).
Use:	Azodicarbonamide, or azodiformamide is mainly as blowing agent in the rubber and plastics industry. Blowing agent in especially EVA and PVC.
Comments:	Can leave residues of formamide in the material. ADCA may decompose into semicarbazide a suspected carcinogen. Use physical blowing agents such as carbondioxide, hydrocarbons or nitrogen as alternative to chemical blowing agents when possible.
Legal background:	ADCA is listed on the Candidate List (REACH). In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).
Test method:	No standardised test method available. Test equipment: GC-MS, LC-MS. LOQ: 200 mg/kg

Ethylenethiourea

Required limit value:	Should not be present in products.
CAS RN:	Imidazolidine-2-thione (2-imidazoline-2-thiol) also called ethylenethiourea: 96-45-7
Properties:	Toxic for reproduction.
Use:	Used primarily as an accelerator for vulcanizing rubber
Legal background:	<p>Ethylenethiourea is listed on the Candidate list (REACH).</p> <p>In France: The substances on the Candidate List are included under the AGECL legislation (LOI n° 2020-105).</p> <p>In California: Ethylenethiourea is listed in Proposition 65. Safe Harbor Limit: NSRL 20 µg/day.</p>
Test method:	<p>No standardised test method available.</p> <p>Test equipment: LC-MS</p> <p>LOQ: 20 mg/kg</p>

Ethylenediamine (EDA)

Required limit value:	Should not be present in products.
CAS RN:	107-15-3
Properties:	Allergenic (respiratory and skin sensitizer).
Use:	Used in the production of many industrial chemicals. Used as a catalyst in epoxy resins (in glues, adhesives, paints). Used in the production of polyurethane fibers.
Legal background:	<p>Ethylenediamine is listed on the Candidate list (REACH).</p> <p>In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).</p>
Test method:	<p>No standardised test method available.</p> <p>Test equipment: LC-MS, GC-MS</p> <p>LOQ: 100 mg/kg</p>

Formaldehyde

Required limit value: 1000 mg/kg
CAS RN: 50-00-0

Properties: Formaldehyde is a volatile colourless gas that is CMR classified. Occurs naturally in small quantities in the atmosphere and in nature. Formaldehyde is a human carcinogen that can also cause skin irritation and allergy.

Use: Transformation product from formaldehyde releasers such as carbamide- and melamine binders (glues). Preservative.

Comments: Use products without formaldehyde or with very low concentrations of formaldehyde.
Due to its volatility, formaldehyde is “contagious”.

Legal background: Formaldehyde and formaldehyde-releasing substances are restricted in furniture and wood-based articles (max release 0,062 mg/m³) as well as other articles (max release 0,080 mg/m³), according to Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 77.

Releases of formaldehyde from construction products are also restricted.

German law (Bedarfsgegenständeverordnung and Chemikalien-Verbotsverordnung); Products with formaldehyde content shall be labeled. Wooden products shall not release formaldehyde. Cleaning and finishing agents shall not contain formaldehyde above 0.2%.

California; Limits on Formaldehyde Emissions from Composite Wood Panels.

In California: Formaldehyde (gas) is listed in Proposition 65.
Safe Harbor Limit: NSRL 40 µg/day.

Test method: EN 717-1, -2, -3 (emissions)
EN 120 (content)
ISO/DIS 12460-2, -3, 4 (emissions)
EN ISO 141 84-1(textiles), LOQ: 16 mg/kg
ISO 17226 (leather), LOQ: 16 mg/kg

Formamide

Required limit value:	Should not be present in products.
CAS RN:	75-12-7
Properties:	Toxic for reproduction.
Use:	Formamide is used as solvent for example in the production of synthetic leather and inks. Furthermore, formamide is used as a solvent and plasticizer in consumer products. It can be an ingredient as softener for paper, water soluble glues and wood stains. During processing of foam, formamide is formed as a by-product at higher temperatures. Especially tosylsemicarbazide and azodicarbonamide (see headline ADCA above) are responsible for the presence of formamide in EVA-consumer products.
Comments:	For the application as solvent, formamide might be replaced by other solvents like dipropylene glycol. Potential alternatives as N,N-dimethylformamide, N-methylformamide or low molecular weight ethylene glycol ethers are not considered to be adequate substitutes due their similar toxicity to reproduction.
Legal background:	Formamide is listed on the Candidate List (REACH). In France: The substances on the Candidate List are included under the AGECL legislation (LOI n° 2020-105). Formamide is restricted in puzzle mats in Belgium and France and included in the Toy Safety Directive (limit value 200 mg/kg).
Test method:	No standardised test method available. Solvent extraction. Test equipment: GC-MS or LC-MS LOQ: 50 mg/kg

Fluorinated Greenhouse gases

(Perfluorocarbons (PFCs), Sulfur hexafluoride (SF₆) and Hydrofluorocarbons (HFCs))

Required limit value:	Should not be used in processes or present in products.
CAS RN:	Several, see appendix 5.
Properties:	Dangerous for the environment.
Use:	Semiconductor manufacturing processes use high GWP fluorinated compounds including perfluorocarbons (e.g., CF ₄ , C ₂ F ₆ and C ₃ F ₈), hydrofluorocarbons (CHF ₃ , CH ₃ F and CH ₂ F ₂), nitrogen trifluoride (NF ₃) and sulfur hexafluoride (SF ₆). Refrigerant, foaming agent, extinguishing agents, cleaning agents, insulating media, caustic gas. SF ₆ plasma is used in the semiconductor industry as an etchant and for flat panel display units manufacturing.
Alternative:	Ammonia, hydrocarbons, carbondioxide, depending on specific use/application.
Legal limit:	Intentionally added. Regulation (EC) No 517/2014 of the European parliament and of the council of 16 April 2014 on fluorinated greenhouse gases Products that are not listed in Annex III in regulation (EC) 517/2014 may be sold under certain conditions. Products and equipment that contain fluorinated greenhouse gases must be labelled before being placed on the market.
Test method:	No suited method for dissolved gases in products

Hexahydrophthalic anhydrides (HHPA and MHHPA)

Required limit value:	Should not be present in products.
CAS RN:	Hexahydromethylphthalic anhydride; 25550-51-0 Hexahydro-4-methylphthalic anhydride; 19438-60-9 Hexahydro-1-methylphthalic anhydride; 48122-14-1 Hexahydro-3-methylphthalic anhydride; 57110-29-9 Hexahydrophthalic anhydride; 85-42-7, 14166-21-3, 13149-00-3
Properties:	Allergenic (skin and respiratory sensitizer). Impacts caused by MHHPA on the health of the affected individuals and on society as a whole, are comparable to those elicited by category 1 carcinogens, mutagens and reproductive toxicants (CMRs), and the substance is considered of very high concern.
Use:	MHHPA is a curing agent for epoxy resin mainly used in electric and electronics field. MHHPA is commonly used in a specific mixture with HHPA (hexahydrophthalic anhydride). Found in diode (LED), transmitter and capacitor in electronic manufacturing industry.
Legal background:	0.1% by weight Candidate list (REACH). In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).
Test method:	No standardised test method available. Test equipment: GC-MS

Hydrazine

Required limit value:	Should not be used in processes or present in products.
CAS RN:	Hydrazine: 302-01-2, 7803-57-8
Properties:	Carcinogenic, allergenic (skin sensitizer), toxic.
Use:	Mainly used as a chemical foaming agent in preparing polymer foams. Corrosion inhibitor.
Comments:	Use physical blowing agents such as carbondioxide, hydrocarbons or nitrogen as alternative to chemical blowing agents when possible.
Legal background:	<p>0.1% by weight Candidate list (REACH).</p> <p>In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).</p> <p>In California: Hydrazine is listed in Proposition 65. Safe Harbor Limit: NSRL 0.04 µg/day.</p>
Test method:	<p>No standardised test method available.</p> <p>Test equipment: UV-VIS Spectrometer, GC-MS LOQ: 200 mg/kg</p>

Imidazoles

Required limit value:	Should not be used in processes or present in products.
CAS RN:	1-vinylimidazole CAS 1072-63-5 2-methylimidazole CAS 693-98-1
Properties:	Toxic for reproduction
Use:	Mainly used in formulations and as a monomer in the production of polymers As a catalyst in the production of coating products. It can be used as the curing agent of adhesives, epoxy resin and as additives for the preparation of foam plastics
Legal background:	1-vinylimidazole and 2-methylimidazole are included in the Candidate list (REACH). In France: The substances on the Candidate List are included under the AGECL legislation (LOI n° 2020-105). In California: 2-methylimidazole is listed in Proposition 65.
Test method:	No standardised test method available. Test equipment: GC-MS. LOQ: 200 mg/kg

4,4'- Diaminodiphenylmethane (MDA)

Required limit value:	Should not be used in processes or present in products.
CAS RN:	101-77-9
Properties:	Carcinogenic, persistent.
Use:	Hardener for epoxy resins, intermediate in the manufacture of high performance polymers e.g. building block for polyether ether ketone (PEEK). Mainly used in epoxy coatings and composites and PEEK. MDA is reacted in the polymerisation process and likely not found free in the material.
Legal background:	<p>0.1% by weight MDA is included on the Candidate list (REACH).</p> <p>In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).</p> <p>In California: MDA is listed in Proposition 65. Safe Harbor Limit: NSRL 0.4 µg/day.</p>
Test method:	<p>No standardised test method available. Test equipment: LC-MS, GC-MS.</p>

2,2'-dichloro-4,4'-methylenedianiline (MOCA)

Required limit value:	Should not be used in processes or present in products.
CAS RN:	101-14-4
Properties:	Carcinogenic, persistent.
Use:	<p>Curing agent (for polyurethane resins, epoxy resins and epoxy urethane resins, polystyrene and poly(methylmethacrylate) (PMMA), cross-linker (for polyurethane), chain extender (for polyurethane) or prepolymer, MOCA may be used as a curing agent in cast polyurethane elastomer production.</p> <p>Polyurethanes with crosslinking agent can be used in the production of machines, buildings, automobiles, airplanes, mining and sport equipment.</p> <p>The amount of un-reacted MOCA is estimated to be in the range of 0.01% and 4%</p>
Legal background:	<p>0.1% by weight</p> <p>MOCA is included on the Candidate list (REACH).</p> <p>In France: The substances on the Candidate List are included under the AGECL legislation (LOI n° 2020-105).</p> <p>In California: MOCA is listed in Proposition 65. Safe Harbor Limit: NSRL 0.5 µg/day.</p>
Test method:	<p>No standardised test method available.</p> <p>Test equipment: LC-MS, GC-MS.</p>

Michler's ketone

Required limit value:	Should not be used in processes or present in products.
CAS RN:	Michler's ketone (4,4'-bis(dimethylamino)benzophenone): 90-94-8.
Properties:	Carcinogenic.
Use:	Process chemical in the production of electronic circuit boards
Legal background:	0.1w% Candidate list (REACH). In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105). In California: Michler's ketone is listed in Proposition 65. Safe Harbor Limit: NRSL 0.8 µg/day.
Test method:	No standardised test method available. Test equipment: LC-MS

Melamine

Required limit value:	Should not be present in products.
CAS RN:	108-78-1
Properties:	Persistent and mobile in environment, Toxic, Carcinogenic
Use:	Used to make melamine derivatives and melamine polymers. Melamine formaldehyde resins/polymers for plastic parts, e.g. switch, relay, plug, socket, plug outlet connector. Melamine resins also for coatings, e.g. enamel type coatings. Melamine formaldehyde foams for electric heat insulation. Melamine derivatives are used as nitrogenous flame retardants, e.g. for epoxy.
Legal background:	Included in the Candidate list (REACH). In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).
Test method:	GC-MS, LC-MS

Ozone depleting substances

Required limit value:	Should not be used in processes or present in products.
Properties:	Liquid or gas. Dangerous for the environment.
Use:	Refrigerant, foaming agent, extinguish ant, solvent cleaner.
Comments:	Alternatives: water-based cleaning in processes, carbon dioxide/water blowing as foaming agent. Several alternatives are greenhouse gases (HFC).
Legal limit:	Intentionally added. Montreal protocol, EC Regulation 1005/2009, Regulation (EU) No 517/2014 of the European Parliament and of the Council on fluorinated greenhouse gases.
Test method:	No suited method for dissolved gases in products

PAH - Polycyclic aromatic hydrocarbons

Required limit value:	Should not be used in processes or present in products.
CAS RN:	Various, regulated PAHs are listed in appendix 6.
Properties:	Carcinogenic, allergenic (sensitizer), toxic. Several are persistent, bioaccumulative and toxic in the environment.
Use:	<p>PAHs are not synthesized chemically for industrial purposes. The major source of PAHs is the incomplete combustion of organic material such as coal, oil and wood.</p> <p>They are used as intermediaries in pharmaceuticals, agricultural products, photographic products, thermosetting plastics, lubricating materials, and other chemical industries. May be found as impurities in rubber materials, soft plastics, colored plastics containing carbon black and leather</p>
Comments:	Avoid critical sources for PAH such as Carbon Black and contaminated mineral oil-based lubricants (extender oil) in rubber.
Legal background:	<p>Eight PAHs are listed in annex XVII, entry 50 of the Regulation (EC) No 1907/2006 of the European Parliament and of the Council (REACH). Materials in toys or childcare articles that come into direct contact with the human skin shall not include of any of the listed PAHs in amounts more than 0.5 mg/kg.</p> <p>For rubber or plastic materials with skin contact in other product categories the limit value is 1 mg/kg</p> <p>The voluntary German GS standard has requirements for the sum of 15 PAH and also specifically benzo [a] pyrene that most products in the German market follow. See appendix 6.</p> <p>U.S. EPA priority list include 16 PAH compounds for regulation in air, soil and water.</p> <p>Several PAHs are included in the Candidate list (REACH).</p> <p>In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).</p> <p>In California: Several PAH are listed in Proposition 65. Safe Harbor Limit: NSRL 0.033-0.35 µg/day.</p>

Test method: ISO 21461 (NMR)
AFPS GS 2019-01 PAK
IEC 62321-10:2020
LOQ: 0.2 mg/kg

Photo-initiators

Required limit value: Should not be present in products.

CAS RN: Diphenyl(2,4,6-trimethylbenzoyl)phosphine oxide (TPO):
75980-60-8
2-(dimethylamino)-2-[(4-methylphenyl) methyl]-1-[4-(morpholin-4-yl)phenyl]butan-1-one, Irgacure 379: 119344-86-4
2-benzyl-2-dimethylamino-4'-morpholinobutyrophenone
Irgacure 369: 119313-12-1

Properties: Toxic for reproduction. Very toxic to aquatic life with long lasting effects

Use: Photo-initiators are used in a variety of products, including printing inks, UV coatings, and optical fiber coatings. Commonly used in electronics, printed circuit board manufacturing.

Comments: The main emission and exposure can be expected at industrial workplaces. May be present in the cured ink/print in concentration above 0.1%, but information may not apply in the final article.

Legal background: TPO, Irgacure 369 and Irgacure 379 are included on the Candidate list (REACH).
In France: The substances on the Candidate List are included under the AGECL legislation (LOI n° 2020-105).

Test method: No standardised test method available.
GC-MS

PFAS - Highly fluorinated sulphonic acids (PFOS and related substances)

Required limit value:

CAS RN:

Should not be present in products.

Several, including 1763-23-1, 355-46-4

Properties:

Highly fluorinated carboxylic acids (PFSAs) such as PFOS are persistent, bioaccumulative and toxic (PBT) substances. PFOS can cause cancer (testicular and kidney cancer), liver damage and changes in immune- and endocrine system (e.g. cholesterol levels).

Use:

Antistatic agent for films and plastics. Surface treatment surfactant in semiconductor industry. Protective surfactant layer for metal plating with Cr (VI) compounds. PFOS and other PFSAs are used as an emulsifier in the production of fluoropolymers such as polytetrafluoroethylene (PTFE) etc. They can be as present as pure substances in products or as precursor chemicals (e.g. polymers) that form PFOS and other PFSAs due to transformation processes. Salts of PFBS are used as additives in plastics for anti-static properties, as flame retardants (in PC) and in manufacturing processes of plastics (e.g. for compounding).

Legal limit:

Legal limit: Shall not occur

PFOS and its derivatives are listed as POPs in the Stockholm Convention on Persistent Organic Pollutants (POPs) and banned in EU by the POPs Regulation (EU) No 2019/1021. Residues below 0.1% by weight in articles or part of articles are allowed to be placed on the market and used, as these are the amounts that may be present as impurities.

PFHxS (perfluorohexane-1-sulphonic acid) and its salts and related substances are listed in the Stockholm Convention on Persistent Organic Pollutants (POPs) and banned in EU by the POPs Regulation (EU) No 2019/1021. Residues below 0.025 mg/kg by weight of each substance, and 1 mg/kg of a combination of PFHxS-related substances in substances, mixtures, and articles are allowed to be placed on the market and used, as these are amounts that may be present as impurities.

Perfluorohexane-1-sulphonic acid and its salts (PFHxS), and Perfluorobutane sulphonic acid (PFBS) and its salts are listed on the Candidate List (REACH).

In France: The substances on the [Candidate List](#) are included under the AGECE legislation (LOI n° 2020-105).

Declaration duty in Sweden to the Swedish Chemicals Agency for PFAS in chemical products that are deliberately added. Composition needs not to be specified but the information duty applies without any concentration limit.

In California: Perfluorooctane Sulfonic Acid (PFOS) and its salts and transformation and degradation precursors are listed in Proposition 65.

Test method:

CEN/TS 15968:2010

IEC 62321-3-2 (Screening – Fluorine by combustion-ion chromatography (C-IC)

Test equipment: LC-MS

PFAS - Highly fluorinated ethers

Required limit value: Should not be present in products.

CAS RN: 13252-13-6

Properties: Highly fluorinated ethers (PFPEs) such as HFPO-DA (2,3,3,3-tetrafluoro-2-(heptafluoropropoxy)propionic acid) were developed as replacements for PFAO and PFOS. They are water-soluble and mobile surfactants that are under suspicion to be equally persistent as other PFASs. While the bioaccumulation potential of HFPO-DA is still uncertain, this substance has showed adverse effects on kidney, immune- and haematological system, as well as effects on foetus development in animal studies. Other PFPEs are likely to be equally stable and mobile.

Use: PFPEs are used as emulsifiers in the production of fluoropolymers such as polytetrafluoroethylene (PTFE) etc.

Comments: Non-fluorinated emulsifiers such as hydrocarbons should be preferred to produce fluoro polymers. Fluorinated emulsifiers may only be applied for essential uses.

Legal background: HFPO-DA, its salts and its acyl halides (CAS 13252-13-6, 67118-55-2, 2062-98-8 and 62037-80-3) are listed on the Candidate List (REACH).

In France: The substances on the Candidate List are included under the AGECL legislation (LOI n° 2020-105).

Declaration duty in Sweden from 1 January 2019 to the Swedish Chemicals Agency for PFAS in chemical products that are deliberately added. Composition needs not to be specified but the information duty applies without any concentration limit.

Test method: IEC 62321-3-2 (Screening – Fluorine by combustion-ion chromatography (C-IC))
Test equipment: LC-MS
LOQ: -

Solvents

Aromatic organic solvents

Required limit value:	Should not be present in products.
CAS RN:	Various
Properties:	Liquids or gases. Inhalation can affect the nervous system and cause headache, fatigue and nausea. Cause irritation on skin, eyes and mucous membranes. Kerosene and diesel odour in finished products. Some aromatic organic compounds are carcinogenic.
Use:	Solvents.
Comments:	<p>Many but not all aromatic organic solvents are volatile organic compounds (VOC). There are statutory hygienic limit values for employees in many countries.</p> <p>Alternatives are solvents of higher quality with lower levels of aromatic hydrocarbons or synthetic thickeners based on polycarboxylic acids. To avoid problems with organic solvents, switching to water-based dyeing and printing processes is recommended.</p>
Legal background:	<p>Manufacturers in the EU are required to follow the Industry Emissions Directive (IED), 2010/75/EU.</p> <p>In California: Benzene is listed in Proposition 65. Safe Harbor Limit: NSRL 6.4 µg/day (oral), 13 µg/day (inhalation). MADL: 24 µg/day (oral), 49 µg/day (inhalation).</p> <p>France regulates certain mineral oils in ink for packaging and printed paper (the AGECE legislation, LOI n° 2020-105). Limits: 1.0% for Aromatic hydrocarbons (MOAH) consisting of 1 to 7 aromatic rings by January 2023; 0.1% for MOAH consisting of 1 to 7 aromatic rings by January 2025 and 1 ppm MOAH compounds containing 3 to 7 aromatic rings by January 2025.</p>
Test method:	<p>SNV 195 651, screening method. Panel odour test.</p> <p>Detection limit: No odour.</p> <p>No standardised quantitative test method for materials available.</p>

Aliphatic organic solvents

Required limit value:

Should not be present in products.

CAS RN:

Various

Properties:

Liquids or gases. Inhalation can affect the nervous system and cause headache, fatigue and nausea, as well as chronic effects. Cause irritation on skin, eyes and mucous membranes.

Use:

Solvents. The limit for humans to sense a smell lies around 100 mg/kg for most substances.

Comments:

Some aliphatic organic solvents are volatile organic compounds (VOC). If possible, chose water-based systems based on easily degradable surfactants. If not possible to switch over to water- based systems, there are statutory hygienic limit values for employees in many countries for strict compliance to maintain workers safety.

Legal background:

Manufacturers in EU are required to follow the “IED”, 2010/75/EU.

2-methoxyethyl acetate, CAS RN 110-49-6, and formamide, CAS RN 75-12-7, are two aliphatic solvents listed on the Candidate List (REACH).

In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105). The legislation also regulates certain mineral oil in ink for packaging and printed paper. Limit: 0.1% for mineral oil saturated hydrocarbons (MOSH) consisting of 16 to 35 carbon atoms by January 2025.

Test method:

SNV 195 651, screening method. Panel odour test.
Detection limit: No odour.

Aprotic solvents

DMFa (N, N-dimethylformamide)

Required limit value:

Should not be present in products in concentrations above 500 mg/kg (sum of DMFa, DMAC and NMP)..

CAS RN:

N,N-dimethylformamide (DMFa): 68-12-2

Properties:

Toxic to reproduction. It may have a faint amine odour in finished products.

Use:

Used as solvent and in high voltage capacitors. Used in production of elastomers, leather imitation, as PU, acrylic and aramide. An intermediate for paper finishing

Comments:

If possible, chose water-based systems based on easily degradable surfactants. If not possible to switch over to water-based systems, there are statutory hygienic limit values for employees in many countries for strict compliance to maintain workers safety.

Legal background:

Candidate list (REACH).

In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).

In California: DMFa is listed in Proposition 65.

Test method:

Test equipment: GC-MS
EN 16778 (protective gloves)
CEN ISO/TS 16189 (footwear and footwear components)

EN 17131 (textile)

LOQ: 10 mg/kg

DMAC

Required limit value:

Should not be present in products in concentrations above 500 mg/kg (sum of DMFa, DMAC and NMP)..

CAS RN:

N, N-dimethylacetamide (DMAC): 127-19-5

Properties:

Toxic to reproduction, irritating.

Use:

Used in electrolytic capacitors, as solvent and in industrial coatings, elastomers, polyimide films, paint strippers and ink removers. Residues may remain in products as unreacted process chemical.

Comments:

If not possible to switch over to water-based systems, there are statutory hygienic limit values for employees in many countries for strict compliance to maintain workers safety.

Legal background:

Candidate list (REACH).

In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).

In California: DMAC is listed in Proposition 65.

Test method:

No standardised quantitative test method available.

Test equipment: GC-MS, LC-MS
(EN 17131 can be used as reference for in-house methods though it applies to DMFa)
LOQ: 10 mg/kg.

NMP (N-methyl-2-pyrrolidone)

Required limit value:

Should not be present in products in concentrations above 500 mg/kg (sum of DMFa, DMAC and NMP).

CAS RN:

N-methyl-2-pyrrolidone (NMP): 872-50-4

Properties:

Toxic to reproduction, irritating.

Use:

Good solvency properties for polymers. Surface treatment of resins and metal coated plastics or as a paint stripper. Intermediates for plasticizers, stabilizers and specialty inks. It is also used in lithium ion battery fabrication, as a solvent for electrode preparation. Used as solvent in textile coating processes and in production of leather imitation (PU).

Polyamide precursor. SBR (styrene-butadiene) latex production.

Comments:

Note that NEP (1-ethylpyrrolidin-2-one), CAS 2687-91-4 is not a suitable alternative to NMP since it is Reproduction Toxic 1B (a CMR substance), and on-going regulation of a limit value for working environment.

If not possible to switch over to water-based systems, there are statutory hygienic limit values for employees in many countries for strict compliance to maintain workers safety.

Legal background:

Candidate list (REACH).

NMP has a limit value for working environment under Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 71

In France: The substances on the Candidate List are included under the AGECL legislation (LOI n° 2020-105).

In California: NMP is listed in Proposition 65. Safe Harbor Limit: MADL 3200 µg/day (inhalation), 17000 µg/day (dermal).

Test method:

No standardised test method available.

Test equipment: GC-MS, LC-MS

EN ISO 19070 (leather)

(EN 17131 can be used as reference for in-house methods though it only applies to DMFa)

LOQ: 25 mg/kg.

Chlorinated organic solvents

Required limit value:

CAS RN:

Should not be used in processes or present in products.

Various

Properties:

Liquid or gas. Affect the nervous system. Irritating to skin and mucous membranes. Many chlorinated organic solvents are dangerous for the environment.

Use:

Solvent used in the manufacture of rubber, metal paint and several industries used for grease and oil, e.g. in stain removers. Also used in cleaning agents and detergents.

See also under heading "Flame retardants".

Comments:

Where possible, apply water-based emulsions based on easily degradable surfactants. Alternative products are available or under development for all uses.

Legal background:

Solvent	CAS-RN	Legal framework	Legal requirement
Chloroform	67-66-3	Annex XVII of Regulation (EC) No 1907/2006 of the European Parliament and of the Council (REACH). Entry 32, 36, 37, 38, 64	Shall not be placed on the market, or used as substances, as constituents of other substances or in mixtures in concentrations equal to or greater than 0.1% by weight
1,1,2 Trichloroethane	79-00-5		
1,1,2,2 Tetrachloroethane	79-34-5		
1,1,1,2 Tetrachloroethane	630-20-6		
Pentachloroethane	76-01-7		
1,1 Dichloroethylene	75-35-4		
1,4-dichlorobenzene	106-46-7		
Carbon tetrachloride	56-23-5	Regulation (EC) No 1005/2009 of the European Parliament and of the Council of 29 June 2000 on substances that deplete the ozone layer	Shall not be produced, placed on the market, or used
1,1,1 Trichloroethane	71-55-6		
$\alpha,\alpha,\alpha,4$ -tetrachlorotoluene;	5216-25-1	Annex XVII of Regulation (EC) No 1907/2006 of the European Parliament and of the Council (REACH). Entry 72	1 mg/kg in textiles
p-chlorobenzotrichloride			
α,α,α -trichlorotoluene; benzotrichloride	98-07-7		
α -chlorotoluene; benzyl chloride	100-44-7		

Trichloroethylene	79-01-6	Included in Authorization List and in candidate List of Substances of Very High Concern for authorization and annex XIV in Regulation (EC) No 1907/2006 of the European Parliament and of the Council (REACH)	Authorisation is needed for use in EU 0.1% by weight in articles for information duty.
1,2,3-trichloropropane	96-18-4	Candidate List of Substances of Very High Concern for authorization in Regulation (EC) No 1907/2006 of the European Parliament and of the Council (REACH)	0.1% by weight in articles for information duty.

Manufacturers in EU are required to follow the the Industry Emissions Directive (IED), 2010/75/EU.

In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).

In California: Several chlorinated solvents are listed in Proposition 65. Safe Harbor Limit: NSRL 3-50 µg/day.

Test method:

No standardised test method available.
Test equipment: GC-MS, GC-ECD.
LOQ: 0.5 mg/kg (GC-MS)

TGIC and β -TGIC

Required limit value:

Should not be present in products.

CAS RN:

1,3,5-tris(oxiranylmethyl)-1,3,5-triazine-2,4,6(1H,3H,5H)-trione (TGIC): 2451-62-9
1,3,5-tris[(2S and 2R)-2,3-epoxypropyl]-1,3,5-triazine-2,4,6-(1H,3H,5H)-trione (β -TGIC): 59653-74-6

Properties:

Mutagen toxic

Use:

Mainly used as a hardener in resins and coatings; also used in inks for the printed circuit board industry, electrical insulation material, resin moulding systems, laminated sheeting, silk screen printing coatings, tools, adhesives, lining materials and stabilisers for plastics.

Legal background:

Legal Limit: 0.1% by weight
The Candidate List (REACH).

In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).

In California: TGIC is listed in Proposition 65.

Test method:

No standardised test method available.
Test equipment: LC-MS

Tin organic compounds (Organostannic compounds)

Required limit value:	Should not be present in products.
CAS RN:	Various
Properties:	Tributyltin, dibutyltin and dioctyltin compounds are different chemical substances that are toxic and dangerous for the environment. Bioaccumulative and persistent.
Use:	Dibutyltin compounds (DBT) and dioctyltin compounds (DOT) are used in consumer products as heat stabilizers (mainly PVC) or catalysts, Lewis acid catalysts (PU and PVC). Organotin catalysts are used in a wide variety of polyurethane applications, aiding formation of the urethane bond and generally functioning as Lewis acid catalysts. Dibutyltin dichloride (DBTC) may be used as additive in the production of rubber tires.
Comments:	<p>Alternative stabilizers are barium/zinc, potassium/zinc, calcium or calcium/zinc organic stabilisers.</p> <p>Alternative catalysts can be organotitanate or zirconate compounds (e.g. titanium 2-ethylhexanoate) or amines such as bis- (dimethylaminoethyl) ether (BDMAEE) and triethylenediamine (TEDA) along with organometallic compounds such as potassium acetate.</p> <p>Dialkyl tin compounds represents a large family of substances that consist of the following common constituents, see list of DBTs in appendix 2.</p> <p>Trialkyltin compounds are biocides, see also the section regarding Biocidal agent.</p>
Legal background:	<p>Legal Limit: 0.1% by weight</p> <p>Dioctyltin (DOT), dibutyltin (DBT) compounds and tri-substituted organostannic compounds such as tributyltin (TBT) shall not be used in articles. Annex XVII of the Regulation (EC) No 1907/2006 of the European Parliament and of the Council (REACH), entry 20. Several TBT compounds (pesticides) are also included in the Rotterdam convention.</p> <p>Tributyltin oxide (TBTO), 56-35-9, Dibutyltin dichloride (DBTC), 683-18-1, 2-ethylhexyl 10-ethyl-4,4-dioctyl-7-oxo-8-oxa-3,5-dithia-4-stannatetradecanoate (DOTE), 15571-58-1 and reaction mass of DOTE and MOTE, Dibutylbis(pentane-2,4-dionato-O,O')tin, 22673-19-4 and Dioctyltin dilaurate¹, are listed on the Candidate List (REACH).</p>

¹ Dioctyltin dilaurate, stannane, dioctyl-, bis(coco acyloxy) derivs., and any other stannane, dioctyl-, bis(fatty acyloxy) derivs. wherein C12 is the predominant carbon number of the fatty acyloxy moiety

In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).

Test method:

No standardised test method.

Test equipment: GC-MS.

LOQ: 0.2 mg/kg

Trimellitic anhydride (TMA)

Required limit value:	Should not be present in products.
CAS RN	552-30-7
Properties:	May cause allergy or asthma symptoms. May cause an allergic skin reaction.
Use:	<p>Trimellitic anhydride is used mainly in the synthesis of trimellitate esters. These esters are used as plasticizers for polyvinyl chloride, especially when temperature stability is required.</p> <p>TMA is also used for producing epoxy and alkyd resins as well as a variety of other products including dyes, insecticides, polyester resins and pharmaceuticals. It is also widely used in the formulation of paints and plastics.</p>
Comments:	Alternative plasticizers may be epoxidized soybean oil (ESBO)
Legal background:	<p>TMA is listed on the Candidate List (REACH).</p> <p>In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).</p>
Test method:	No standardised test method

PRODUCT-RELATED (PROPERTY-LENDING) CHEMICALS

Arsenic compounds

Required limit value:	Should not be present in products.
CAS RN:	Various
Properties:	May cause cancer. Toxic by inhalation and toxic if swallowed. Persistent, bioaccumulative and toxic.
Use:	Fining agent in glass, in semiconductors, pigment in metal alloy, preservative in wood.
Comments:	Triethyl arsenate may potentially be used in the fabrication of integrated circuits. Arsenic acid is used in the fabrication of printed circuit boards. Arsenic may be used in glass.
Legal limit:	<p>0.1% by weight Diarsenic Pentoxide; 1303-28-2 Diarsenic Trioxide; 1327-53-3 Triethyl arsenate; 15606-95-8 Arsenic acid; 7778-39-4 Calcium arsenate; 7778-44-1 are listed both on the Candidate List (REACH)</p> <p>As wood preservatives regulated in Annex XVII of Regulation (EC) No 1907/2006 of the European Parliament and of the Council (REACH), entry 19 (limit level; no intentionally added content)</p> <p>In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).</p> <p>In California: Inorganic arsenic compounds are listed in Proposition 65. Safe Harbor Limit: NSRL 0.06 µg/day (inhalation), 10 µg/day (except inhalation). Inorganic arsenic oxides are listed in Proposition 65.</p>
Test method:	<p>ISO 19050 (rubber) No standardised test method available. Test equipment: AAS, ICP-MS and ICP-OES LOQ: 100 µg/kg</p>

Asbestos

Required limit value:	Should not be present in products
CAS RN:	Asbestos;1332-21-4
Properties:	May cause cancer.
Use:	Brake lining pad, insulator, filler, abrasive, pigment, paint, talc, adiabatic material. Chrysotile and tremolite are common contaminants in talc.
Comments:	<p>Asbestos is the generic name for a group of six naturally occurring fibrous silicate minerals:</p> <p>Actinolite; 77536-66-4 Amosite ; 12172-73-5 Anthophyllite ; 77536-67-5 Chrysotile ; 12001-29-5 Crocidolite ; 12001-28-4 Tremolite ; 77536-68-6</p>
Legal limit:	<p>Intentionally added Annex XVII of Regulation (EC) No 1907/2006 of the European Parliament and of the Council (REACH), entry 6.</p> <p>Legal exposure limit 0,1 fibre/cc (cubic centimetre) The six fibrous silicate minerals</p> <p>Asbestos are listed in the Rotterdam convention</p> <p>In California: Asbestos is listed in Proposition 65. Safe Harbor Limit: NSRL 100 fibers/day (inhalation).</p>
Test method:	<p>No standardised test method available.</p> <p>Test equipment: Microscopic examination (industry practice; ratio of fibre length to diameter is at polarized light filter least 3:1).</p>

Bis(4-chlorophenyl) sulfone (BCPS)

Required limit value:	Should not be present in products.
CAS RN:	Bis(4-chlorophenyl) sulfone (BCPS): 80-07-9
Properties:	Very persistent and very bioaccumulative (vPvB). Under assessment for PBT. High aquatic toxicity.
Use:	Demanding electronic components in medical equipment microwave ovens and machined parts. Monomer to produce higher-temperature and higher-performance polymers (e.g. aromatic polysulfones). These materials have high resistance to burning and in most applications no flame-retardant additives are needed. Due to good electrical insulation properties and a high resistance to hydrolysis BCPS based polymers are used in wide range of applications.
Comments:	Can be present as production impurities. The main emission and exposure can be expected at industrial workplaces.
Legal background:	BCPS is included on the Candidate list (REACH). In France: The substances on the Candidate List are included under the AGECL legislation (LOI n° 2020-105).
Test method	No standardised test method available

Cadmium (Cd) and cadmium salts

Required limit value:	Should not be present in products.
CAS RN:	Cadmium (metal): 7440-43-9
Properties:	Heavy metal that occurs naturally in small quantities in nature. Toxic to aquatic organisms. Non-biodegradable. Dangerous for the environment. Can cause kidney damage.
Use:	Surface treatment of products-electroplating, relay contact, photodiode voltaic cell. Pigment in colouring agent. Also in plastics (PVC) as stabilizers and pigment. Cadmium based stabilizers to increase the service of life of the material. In Ni/Cd batteries. For recycled packaging cadmium may have had a different original use.
Comments:	<p>Calcium-zinc based stabilizers. Order cadmium-free processes and materials. Battery alternatives are available, such as nickel-zinc (NiZn), nickel metal hydride (NiMH) and lithium-ion (Li-ion) batteries.</p> <p>Occurrence in materials below 0.5 mg/kg is generally regarded as contaminations which cannot be controlled.</p>
Legal limit:	<p>100 ppm in homogenous material² Directive 2011/65/EC of the European Parliament and of the Council (RoHS) on the restriction of the use of certain hazardous substances in electrical and electronic equipment</p> <p>Legal limit in batteries: 20 ppm Directive 2006/66/EC of the European Parliament and of the Council on batteries and accumulators and waste batteries and accumulators. 0.002 weight% in portable batteries (expressed as cadmium metal). Regulation (EU) 2023/1542 of the European Parliament and of the Council of 12 July 2023 concerning batteries and waste batteries.</p> <p>0.01 % by weight (100 ppm) in articles produced from plastic material and in the paint of painted articles. Cadmium shall not be used in brazing fillers or in jewellery.</p>

² The RoHS substance restrictions apply to every individual homogenous material in the part. Exemptions for product category 1-7 and 10 are given in Appendix 1

Annex XVII of Regulation (EC) No 1907/2006 of the European Parliament and of the Council (REACH), entry 23

Cadmium, Cadmium oxide (1306-19-0), Cadmium sulphide (1306-23-6), Cadmium chloride (10108-64-2), Cadmium fluoride (7790-79-6) Cadmium sulphate (10124-36-4, 31119-53-6) , Cadmium nitrate (10325-94-7), Cadmium carbonate (513-78-0) and Cadmium hydroxide (21041-95-2) are listed on the Candidate List (REACH).

The sum of concentration levels of lead, cadmium, mercury and hexavalent chromium present in packaging or packaging components shall not exceed 100 ppm by weight Directive (EC) No 94/62/EC of 20 December 1994 on packaging and packaging waste.

In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).

Korean Quality Management and Safety Control of Industrial Products Act. Legal limit in batteries; 10 ppm

In California: Cadmium and cadmium compounds are listed in Proposition 65. Safe Harbor Limit: MADL cadmium 4.1 µg/day (oral).

Cadmium is restricted in Denmark. Danish legal limits: 75 mg/kg. (*Bekendgørelse nr. 858 af 5. September 2009 om forbud mod import salg og fremstilling af cadmiumholdige varer*)

Test method:

IEC 62321-3-1 (screening Cd)

IEC 62321-5

ISO 19050 (rubber)Test equipment: 1) XRF. 2) AAS, ICP-MS and ICP-OES

LOQ: 1) 50 mg/kg. 2) 100 µg/kg.

Chromium VI compounds

Required limit value:	Should not be present in products.
CAS RN:	Several Chromium VI substances. Chromium VI (Cr+6, hexavalent chromium): 18540-29-9 Chromium (VI) oxide: 1333-82-0
Properties:	Dangerous for the environment. Carcinogenic. Allergenic (sensitizer). Toxic.
Use:	Chromium trioxide (1333-82-0) is used for the passivation of copper foils in the manufacture of printed circuit board. Surface treatment (anti corrosive) in steel manufacturing Chromic acid is used as wood preservative. Some dyes and pigments may contain chromium.
Comments:	Chromium (III), silane-based coating and organic resins may be alternatives for PWB copper passivation but must be evaluated. Chrome (III) is an alternative in surface treatment of metal but only for decorative metal plating and not hard metal plating. Other metals such as tin and zinc may be used for metal plating instead of chromium (VI).
Legal limit:	1000 ppm in homogenous material ³ Directive 2011/65/EC of the European Parliament and of the Council (RoHS) on the restriction of the use of certain hazardous substances in electrical and electronic equipment 0,0003% by weight (3 mg/kg) for leather in direct skin contact 0.1 % by weight for other applications Annex XVII of Regulation (EC) No 1907/2006 of the European Parliament and of the Council (REACH), entry 47. Chromium (VI) compounds listed on the Candidate list (REACH) are listed in Appendix 3. Several Chromium compounds are also included in REACH Annex XIV. The sum of concentration levels of Lead, cadmium, mercury and hexavalent chromium present in packaging or packaging components shall not exceed 100 ppm by weight Directive (EC) No 94/62/EC of 20 December 1994 on packaging and packaging waste.

³ The RoHS substance restrictions apply to every individual homogenous material in the part. Exemptions are given in Appendix 1

In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).

In California: Hexavalent chromium is listed in Proposition 65.
Safe Harbor Limit: NSRL 0.001 µg/day (inhalation), MADL 8.2 µg/day (oral).

Test method:

IEC 62321-3-1 (screening total Cr)
IEC 62321-5 (Cr)
IEC 62321-7-1, -2 (CrVI)
ISO 19050 (rubber)

Cobalt and cobalt (II) compounds

Required limit value:	Cobalt (II) should not be present in products.
CAS RN:	Various
Properties:	Carcinogenic and toxic for reproduction. Conflict mineral. A large part of the world's cobalt production derives from mines in the Democratic Republic of the Congo (DRC).
Use:	Cobalt (II) compounds are used as surface treatment (anti corrosive) in steel manufacturing. Cobalt dichloride is used in drying agent, desiccant (silica gel), as humidity indicator. Cobalt is a key component of lithium batteries.
Comments:	There are alternative systems based on Cerium, Chrome (III), Titan, Zirconium, Silica etc. depending on metal surface treated. Assure and promote ethical and responsible sourcing of cobalt.
Legal limit:	0.1% by weight Cobalt dichloride: 7646-79-9 Cobalt(II) carbonate: 513-79-1 Cobalt(II) diacetate: 71-48-7 Cobalt(II) dinitrate: 10141-05-6 Cobalt(II) sulphate: 10124-43-3 are listed on the Candidate list (REACH). In France: The substances on the Candidate List are included under the AGECL legislation (LOI n° 2020-105). In California: Cobalt(II) sulphate, Cobalt(II) oxide, Cobalt Sulfate Heptahydrate and Cobalt Metal powder are listed in Proposition 65.
Test method:	IEC 62321 ISO 19050 (rubber) Test equipment: 1) XRF. 2) AAS. 3) ICP-MS and ICP-OES LOQ: 1) 50 mg/kg as Cobalt. 2) 100 µg/kg as Cobalt.

EGDME, DEGDME and TEGDME

Required limit value:	Should not be used in processes or present in products.
CAS RN:	1,2-dimethoxyethane; ethylene glycol dimethyl ether (EGDME); 110-71-41,2-Diethoxyethane; 629-14-1 Bis(2-methoxyethyl) ether (diglyme,); 111-96-6 1,2-bis(2-methoxyethoxy)ethane (triglyme, TEGDME); 112-49-2 Bis(2-(2-methoxyethoxy)ethyl)ether (tetraglyme, TEGDME); 143-24-8
Properties:	Toxic for reproduction
Use:	Use as an electrolyte solvent in lithium batteries. As a solvent or as a processing aid in the manufacture and formulation of industrial chemicals. May be in found in printing inks.
Legal limit:	0.1% by weight The Candidate list (REACH) In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).
Test method:	No standardised test method available. Test equipment: LC-MS

Flame retardants/Biocides - Boric acid, and related boron compounds

Required limit value:	Should not be present in products.
CAS RN:	<p>Boric acid; 10043-35-3 and 11113-50-1 Disodium tetraborate anhydrous; 1303-96-4, 12179-04-3 and 1330-43-4 Tetraboron disodium heptaoxid, hydrate; 12267-73-1 Diboron trioxide; 1303-86-2 Lead bis(tetrafluoroborate) 13814-96-5 Sodium perborate; perboric acid, sodium salt, 234-390-0 Sodium peroxometaborate, 7632-04-04 Disodium octaborate, 12008-41-2 Orthoboric acid, sodium salt, e.g. 13840-56-77 Barium diboron tetraoxide, 13701-59-2</p>
Properties:	Toxic to reproduction
Use:	<p>Diboron trioxide, and Boron sodium oxide (B_3NaO_5) may be found in electrical components of glass and ceramic (resistors, condensers, diodes). Wood veneers/pressed wooden panels. Boric acid and other boron compounds may be used as flame retardant in wood, for polystyrene beads and biocidal agent in boards etc.</p>
Legal limit:	<p>Boric acid, disodium tetraborate anhydrous, disodium octaborate, tetraboron disodium heptaoxid, hydrate, diboron trioxide, lead bis(tetrafluoroborate), sodium perborate; perboric acid, sodium salt, Sodium peroxometaborate and Orthoboric acid, sodium salt are listed on the Candidate List (REACH).</p> <p>In France: The substances on the Candidate List are included under the AGECL legislation (LOI n° 2020-105).</p>
Test method:	<p>No standardised test method available. Test equipment: AAS, ICP-MS and ICP-OES LOQ: 25 mg/kg for individual compounds (10 mg/kg for total Boron content)</p>

Flame retardants - Chloroorganic phosphates (TCEP, TCPP, TDCPP/TDCP)

Required limit value:	Should not be present in products.
CAS RN:	Tris(2-chlorethyl)phosphate (TCEP): 115-96-8 Tris(2-chloro-1-methylethyl) phosphate (TCPP; CAS 13674-84-5) Tris(1,3-dichloro-2-propyl)phosphate (TDCPP/TDCP; CAS 13674-87-8)
Properties:	Persistent, bioaccumulative and toxic. Halogenated organic additives in polymers may leach out and have a negative impact on health and environment. Halogen containing polymers may form highly corrosive substances and undefined range of halogenated substances that may be PBT or CMR when incinerated.
Use:	Flame-retardant treatment of products. Plasticizers.
Comments:	Replace chloroorganic chemical flame retardants with phosphorus- and/or nitrogen-based organic chemical flame retardants or non chemical barrier technologies.
Legal background:	Legal limit: 0.1% by weight Tris(2-chlorethyl) phosphate (TCEP) is listed in the Candidate List (REACH). Toy Safety directive; TCEP, TCPP, TDCPP/TDCP shall not be used (2009/48/EC) TCPP and TDCPP/TDCP are regulated for childcare articles and children's products in Canada and by US states New York In France: The substances on the Candidate List are included under the AGECL legislation (LOI n° 2020-105). In California: TCEP and TDCPP are listed in Proposition 65. Safe Harbor Limit: RSRL 5.4 µg/day (TDCPP).
Test method:	EC 62321-11 . Test equipment: GC-MS, LC-MS, GC-ECD LOQ: 5 mg/kg.

Flame retardants/Plasticizers - Chloroparaffins

Required limit value:	Should not be present in products.
CAS RN:	Short-chain chloroparaffins(SCCP; C10-C13): e.g. 85535-84-8 Medium-chain chloroparaffins (MCCP; C14-C17): e.g. 85535-85-9, 198840-65-2, 1372804-76-6 Long-chain chloroparaffins (LCCP; C18-): 85535-86-0
Properties:	Persistent, bioaccumulative and toxic. Carcinogenic. Allergenic (sensitizer).
Use:	Plasticizers and flame retardant in plastic material and rubber. Fat liquoring agent in leather production.
Comments:	Alternative plasticizers and flame retardants are available but must be evaluated. Halogen-free alternatives include phosphorus- and nitrogen-based flame retardants and non-chemical barrier technologies.
Legal background:	<p>Legal limit: Shall not occur.</p> <p>Short-chain chloroparaffins are listed as POP in the Stockholm Convention on Persistent Organic Pollutants (POPs) and banned in EU by Regulation (EU) No 2019/1021. Residues below 0.15% SCCP by weight in articles are allowed to be placed on the market and used, as this is the amount of SCCP that may be present as an impurity in an article produced with MCCP.</p> <p>Short-chain chloroparaffins (C10-C13) and Medium-chain chloroparaffins (C14-C17) are listed on the Candidate list (REACH).</p> <p>In France: The substances on the Candidate List are included under the AGECL legislation (LOI n° 2020-105).</p> <p>Canada: Chlorinated alkanes with (C10-C13) are prohibited.</p> <p>In California: Chloroparaffins are listed in Proposition 65. Safe Harbor Limit: NSRL 8 µg/day.</p>
Test method:	No standardised test method available. Test equipment: GC-MS, LC-MS

Flame retardants - Dechlorane™ Plus

Required limit value:	Should not be present in products
CAS RN:	13560-89-9; 135821-74-8; 135821-03-3 (Dodecachloropentacyclo octadeca diene)
Properties:	Persistent and bioaccumulative.
Use:	Flame retardant for plastics, electronic wiring and cables, automobiles, hard plastic connectors and plastic roofing material. Use in adhesives and sealants. Use in binding agents.
Legal background:	<p>Dechlorane™ Plus is listed in the Candidate List (REACH).</p> <p>In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).</p> <p>Canada: Dechlorane is prohibited from 2023.</p>
Test method:	<p>IEC 62321-3-2 (screening combustion-IC total chlorine)</p> <p>IEC 62321-3-3 (screening with pyrolyser/thermal desorption)</p> <p>Test equipment: GC-MS, LC-MS, GC-ECD, (XRF to detect chlorine).</p> <p>LOQ: 100 mg/kg</p>

Flame retardants - Hexabromocyclododecan (HBCDD)

Required limit value:	Should not be present in products.
CAS RN:	Hexabromocyclododecane (HBCDD): 25637-99-4, 3194-55-6, 134237-50-6, 134237-51-7 and 134237-52-8
Properties:	<p>Persistent, bioaccumulative and toxic. Halogenated organic additives in polymers may leach out and have a negative impact on health and environment.</p> <p>Halogen containing polymers may form highly corrosive substances and an undefined range of halogenated substances that may be PBT or CMR when incinerated.</p>
Use:	Flame-retardant treatment of products, where fire protection is required. Mainly used in HIPS (range 5% to 7%). Also used in packaging flakes made of polystyrene (PS).
Comments:	Alternative plasticizers and flame retardants are available but must be evaluated. Halogen-free alternatives include phosphorus- and nitrogen-based flame retardants and non-chemical barrier technologies.
Legal background:	<p>Legal limit: Shall not occur.</p> <p>Hexabromocyclododecane is listed as POP in the Stockholm Convention on Persistent Organic Pollutants (POPs) and is banned in EU by Regulation (EU) No 2019/1021. Residues below 100 mg/kg are allowed to be placed on the market and used, as this amount may be present as an impurity.</p>
Test method:	<p>IEC 62321-9 (HBCDD)</p> <p>IEC 62321-6 (PBB, PBDE)</p> <p>IEC 62321-3-1 (screening XRF total bromine)</p> <p>IEC 62321-3-2 (screening combustion-IC total bromine)</p> <p>IEC 62321-3-3 (screening with pyrolyser/thermal desorption accessory GC-MS)</p> <p>Test equipment: GC-MS, LC-MS, GC-ECD</p> <p>LOQ: 20 mg/kg.</p>

Flame retardants – Polybrominated biphenyls (PBB) and Polybrominated diphenyl ethers (PBDE)

Required limit value:	Should not be present in products.
CAS RN:	Several Polybromerade biphenyl 59536-65-1(mix) Hexabromobiphenyl: 36355-01-8 Tetrabromodiphenyl ether (TetraBDE): 5436-43-1 Penta bromo biphenyl ether (pentaBDE): 32534-81-9, 60348-60-9 Hexa bromo biphenyl ether (HexaBDE): 68631-49-2, 207122-15-4, Heptabromodiphenyl ether (HeptaBDE): 207122-16-5, 446255-22-7 Octa bromo biphenyl ether (OctaBDE): 32536-52-0 Deca bromo biphenyl ether (DecaBDE): 1163-19-5
Properties:	Persistent, bioaccumulative and toxic
Use:	Flame-retardant treatment of products where fire protection is required.
Comments:	Alternative plasticizers and flame retardants are available but must be evaluated. Halogen-free alternatives include phosphorus- and nitrogen-based flame retardants and non-chemical barrier technologies.
Legal limit:	1000 ppm in homogenous material ⁴ Directive 2011/65/EC of the European Parliament and of the Council (RoHS) on the restriction of the use of certain hazardous substances in electrical and electronic equipment. TetraBDE, PentaBDE, HexaBDE, HeptaBDE, DecaBDE and Hexabromobiphenyl are listed as POP in the Stockholm Convention on Persistent Organic Pollutants (POPs) and are banned in EU by the POPs regulation (EU) No 2019/1021. Hexabromobiphenyl is banned in detectable content. TetraBDE, PentaBDE, HexaBDE, HeptaBDE, DecaBDE are banned, but only in substances, mixtures and articles that are not covered by the RoHS-directive (above). Residues of TetraBDE, PentaBDE, HexaBDE, HeptaBDE, DecaBDE in mixtures and articles are considered as impurities if the sum of them is below 500 mg/kg.

⁴ The RoHS substance restrictions apply to every individual homogenous material in the part. Exemptions for product category 1-7 and 10 are given in Appendix 1

In substances, residues below 10 mg/kg of each brominated diphenylether is considered as impurities.

OctaBDE is restricted in Entry 45 of Annex XVII to Regulation (EC) No 1907/2006 (REACH). The legal limit for OctaBDE in substances and mixtures is 0.1 % by weight. The legal limit for OctaBDE in articles or in flame-retardant parts of articles that are not covered by the RoHS-directive is 0.1 % by weight.

DecaBDE is listed on the Candidate List (REACH).

PBBs are listed in the Rotterdam Convention

In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).

In California: Pentabromodiphenyl ether mixture [DE-71] (technical grade), Polybrominated and polychlorinated biphenyls are listed in Proposition 65. Safe Harbor Limit: NSRL PBB 0.02 µg/day, PCB 0.09 µg/day.

Test method:

IEC 62321-6

IEC 62321-3-1 (screening total bromine)

IEC 62321-3-2 (total bromine)

IEC 62321-3-3 (screening with pyrolyser/thermal desorption accessory GC-MS)

EN 16377 for PBB (plastics)

Test equipment: 1) XRF. 2) GC-MS, LC-MS, GC-ECD LOQ:
1) 50 mg/kg as Br. 2) 10 mg/kg.

IEC 62321-9 (HBCDD)

IEC 62321-12 (GC-MS)

Flame retardants – Tetrabromobisphenol A, TBBPA

Required limit value:	Should not be present in products.
CAS RN:	79-94-7
Properties:	Carcinogenic
Use:	Mainly used as a reactive flame-retardant component in epoxy-coated circuit board, Additive flame retardant in polymers, i.e. ABS, PS, etc
Legal background:	<p>Legal limit: 0.1% by weight</p> <p>TBBPA is listed in the Candidate List (REACH).</p> <p>In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).</p>
Test method:	<p>IEC 62321-3-1 (screening XRF total bromine)</p> <p>IEC 62321-3-2 (screening combustion-IC total bromine)</p> <p>Test equipment: GC-MS, LC-MS, GC-ECD</p> <p>LOQ: 5 mg/kg</p>

Flame retardants / Plasticizers – Trisubstituted phosphates

Required limit value:	Should not be present in products.
CAS RN:	Trixylyl phosphate: 25155-23-1, Isopropylated, phenyl phosphate (3:1): 68937-41-7
Properties:	Toxic for reproduction
Use:	Plasticizer and flame retardant of PVC and PU. Mainly used as functional fluid. Plasticizer of vinylite (a copolymer of vinyl chloride and vinyl acetate), cellulosic resins and natural and synthetic rubber.
Legal background:	<p>Legal limit: 0.1% by weight</p> <p>Trixylyl phosphate: 25155-23-1 is listed both in the Candidate List (REACH).</p> <p>Phenol, Isopropylated, phosphate (3:1): 68937-41-7 is listed in the Candidate List of Substances of Very High Concern of the Regulation (EC) No 1907/2006 of the European Parliament and of the Council (REACH).</p> <p>In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).</p>
Test method:	<p>No standardised test method available.</p> <p>Test equipment: GC-MS, LC-MS, GC-ECD</p> <p>LOQ: 5 mg/kg</p>

Flame retardants – Other halogenated flame retardants

Required limit value:

Should not be present in products

Properties:

Hazardous halogenated substances are difficult to break down and accumulate in humans, animals and plants - with cancerous risks and harmful effects on hormonal functions. Brominated and chlorinated flame retardants are restricted in several companies RSL and in environmental labeling systems, due to their hazardous environmental and health properties

Use:

As flame retardant and/or as plasticizers.

Comments:

There are several non-halogenated flame retardants with low effects on human and nature that may be used as alternatives. Different flame retardant systems fit different plastic material and must be evaluated from case to case. Some examples of alternatives and use are listed in table below:

Alternative substance	Used in plastics
Aluminium trihydroxide (ATH)	Polyolefins, EVA, PVC etc
Magnesium hydroxide	Polyolefins, EVA, PVC etc
Red phosphorus	fibreglass-reinforced polyamides
Ammonium polyphosphate (APP)	polyamides and polyolefins if combined with suitable synergists
Antimony trioxide (ATO)	flame retardant properties in combination with halogen containing polymers (e.g PVC)
Zinc borates	Zinc borates (used mainly in PVC) cannot be used alone to achieve desired flame retardant properties in polymers, since it is used as synergist together with other flame retardants
Zinc hydroxystannate (ZHS) and Zinc stannate (ZS)	ZHS and ZS have primarily found use as alternative non-toxic synergists to antimony trioxide in PVC and other halogen-containing polymer systems.
Aryl phosphates	PVC, HIPS and styrenics. Note some of the aryl phosphates are restricted (included in this guide, see 'Trisubstituted phosphates')
Di hydro-oxaphosphaphenanthrene oxide (DOPO)	used to make phosphorus containing epoxy resins for printed circuit boards
Metal-phosphinates	glass fibre reinforced polyamides and polyesters

Nitrogen based organic flame-retardants	Melamine plastics
---	-------------------

Legal background: Halogenated flame retardants are restricted in plastic enclosures and stands of electronic displays, regulation (EU) 2019/2021, the ecodesign requirements for electronic displays (100cm² Display).

Several halogenated flame retardants have been restricted globally; see specific substances in this guide.

Some halogenated flame retardants, including 1,1'-[ethane-1,2-diylbisoxo]bis[2,4,6-tribromobenzene] (BTBPE, CAS RN: 37853-59-1), Bis(2-ethylhexyl) tetrabromophthalate (TBPH, CAS RN 26040-51-7), 2,2-bis(bromomethyl)propane-1,3-diol (BMP, CAS RN 3296-90-0), 2,2-dimethylpropan-1-ol, tribromo derivative/3-bromo-2,2-bis(bromomethyl)-1-propanol (TBNP, CAS RN 36483-57-5, 1522-92-5), 2,3-dibromo-1-propanol (2,3-DBPA, CAS RN 96-13-9) are on the Candidate List (REACH).

In addition to these, there is a huge number of other halogenated substances that are not legally restricted. However there are industry standards defining “halogen free” “low halogen electronics” etc, see appendix 7.

In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).

In California: Vinyl bromide (CAS RN: 593-60-2) and Tris(2,3-dibromopropyl)phosphate, TBPP (CAS RN: 126-72-7) are listed in Proposition 65. Safe Harbor Limit: NRSL 0.3 µg/day for Tris(2,3-dibromopropyl)phosphate.

TBPP was last being sold in late 1970s and is probably phased-out except for in recycled materials.

Test method: IEC 62321-3-1 (screening XRF total bromine)
IEC 62321-3-2 (screening combustion-IC total bromine)

IEC 62321-3-3 (screening with pyrolyser/thermal desorption accessory GC-MS)
Bromine and chloride containing substances can be detected by for instance XRF, combustion ion chromatography, AAS and ICP.

Gold

Required limit value:	Gold originated from conflict areas should not be present in products.
CAS RN:	7440-57-5
Properties:	Good chemical resistance and conductivity properties. Conflict mineral
Use:	Corrosion-free electrical connectors in electrical devices.
Comments:	Assure and promote ethical and responsible sourcing of gold.
Legal background:	<p>Regulation (EU) 2017/821 of the European Parliament and of the Council of 17 May 2017 laying down supply chain due diligence obligations for Union importers of tin, tantalum and tungsten, their ores, and gold originating from conflict-affected and high-risk areas.</p> <p>Section 1502 of the Dodd–Frank Wall Street Reform and Consumer Protection Act (USA)</p>
Test method:	<p>No standardised test method available.</p> <p>Test equipment: XRF, AAS, ICP.</p>

Lead (Pb) and lead salts

Required limit value: Should not be present in products.

CAS RN: Lead (metal): 7439-92-1

Properties: Lead exposure can give rise to a number of negative health effects, including damage to liver, nervous system and foetuses. Lead is mainly accumulated in bone tissue. It has a very long half-life in the human body. Use of lead in plastics has not been deemed to cause any significant environmental or health effects in the short term, but in the long term such use increases lead concentrations in the environment.

Use: Solder. Lead salts are additives in plastics (pigments/colourants). Lead based stabilizers increase the service of life of the material (cables/cords). Rubber hardener, pigment, materials for battery, (zinc carbon batteries, alkaline button cells), optical materials, X-ray shielding in CRT glass, ferroelectrics. Metallic surface coating. For recycled packaging material lead may have had a different original use. Lead metal can also be used to increase ductility of other metals. Piezoelectric PZT components (i.e buzzers) consist mainly of lead (P), zirconium (Z), titanium (T) (Lead zirconium titanium oxide is an SVHC). These components are exempted in RoHS directive however lead titanium zirconium oxide and lead titanium trioxide are listed in Candidate list.

Comments: Alternatives are available, such as lead-free solder. Alternative stabilizers are barium/zinc, potassium/zinc or calcium, calcium/zinc organic stabilisers. Alternative catalysts can be organotitanate or zirconate compounds (e.g. titanium 2-ethylhexanoate) or amines such as bis- (dimethylaminoethyl) ether (BDMAEE) and triethylenediamine (TEDA) along with organometallic compounds such as potassium acetate.

Legal limit: 1000 ppm in homogenous material⁵
Directive 2011/65/EC of the European Parliament and of the Council (RoHS) on the restriction of the use of certain hazardous substances in electrical and electronic equipment

Lead and lead salts are listed both on the Candidate List (REACH). SVHC lead compounds are listed in Appendix 4.

⁵ The RoHS substance restrictions apply to every individual homogenous material in the part. Exemptions for product category 1-7 and 10 are given in Appendix 1

Labelling requirement on batteries when exceeding 40 ppm of lead. Directive 2006/66/EC of the European Parliament and of the Council on batteries and accumulators and waste batteries and accumulators.

From 18 Aug 2024: max. 0.01 weight% in portable batteries (expressed as lead metal). (Applies to zinc-air button cells from 18 Aug 2028). Regulation (EU) 2023/1542 of the European Parliament and of the Council of 12 July 2023 concerning batteries and waste batteries.

In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).

Chinese Standard GB 24427-2009 (Alkaline zinc manganese dioxide batteries); 40 ppm

Brazil Legislation (CONAMA Resolution 401/2008) and Swiss legislation: 1000 ppm of lead and lead compounds in non-alkaline zinc-manganese dioxide batteries

Lead salts are restricted in paint products (no restriction on painted articles) within the EU, entry 16 (lead carbonates) and 17 (lead sulphates). Lead and its compounds are restricted in jewellery articles within EU with a legal limit: 500 mg/kg (0.05%). Lead and its compounds are restricted in articles that may be placed in the mouth by children with the legal limit 500 mg/kg (0.05%)⁶, entry 63. Annex XVII of Regulation (EC) No 1907/2006 of the European Commission.

Danish legal limits: 100 mg/kg. (*Bekendtgørelse nr. 856 af 5. September 2009 om forbud mod import og salg af produkter, der indeholder bly*).

In California: Lead and lead compounds are listed in Proposition 65. Safe Harbor Limit: NRSL lead acetate 23 µg/day (oral), lead 15 µg/day (oral), lead phosphate 58 µg/day (oral), lead subacetate 41 µg/day (oral), MADL lead 0.5 µg/day.

US Consumer Product Safety Improvement Act regarding toys and childcare articles: 90 ppm in paint and similar coatings 100 ppm in accessible parts in toys and childcare articles.

The sum of concentration levels of lead, cadmium, mercury and hexavalent chromium present in packaging or packaging components shall not exceed 100 ppm by weight Directive (EC) No 94/62/EC of 20 December 1994 on packaging and packaging waste.

⁶ The limit does not apply if the rate of lead release is 0.05 µg/cm. per hour (equivalent to 0.05 µg/g/h) or lower. For coated articles, this release rate must not be exceeded for at least two years of use.

Test method:

IEC 62321-3-1 (screening XRF lead)

IEC 62321-5 (AAS, AFS, ICP-OES and ICP-MS)

ISO 19050 (rubber)

Test equipment: 1) XRF. 2) AAS, ICP-MS and ICP-OES

LOQ: 1) 50 mg/kg as lead. 2) 10 mg/kg as lead

Mercury

Required limit value:

Should not be present in products.

CAS RN:

Mercury (metal): 7439-97-6
 Phenylmercury neodecanoate: 26545-49-3
 Phenylmercury octanoate: 13864-38-5
 Phenylmercury 2-ethylhexanoate: 13302-00-6
 Phenylmercury propionate : 103-27-5
 Phenylmercury acetate: 62-38-4

Properties:

Heavy metal that occurs naturally in small quantities in nature. Toxic to aquatic organisms. Non-biodegradable. Dangerous for the environment. Can cause kidney damage.

Use:

In lamps. Metal construction parts. Relays and switches. In batteries; silver-oxide button cells, alkaline batteries, zinc carbon batteries.
 Phenylmercury compound are used as catalysts in the production of polyurethane coatings, adhesives, sealants and elastomers.

Comments:

LED lamps contain no mercury. Order mercury-free processes and materials. Battery alternatives are available, such as nickel-zinc (NiZn), nickel metal hydride (NiMH) and lithium-ion (Li-ion) batteries.

Legal limit:

1000 ppm in homogenous material⁷
 Directive 2011/65/EC, (RoHS) on the restriction of the use of certain hazardous substances in electrical and electronic equipment

Legal limit in batteries:
 5 ppm
 Directive 2006/66/EC on batteries and accumulators and waste batteries and accumulators.
 0.0005 weight% in batteries (expressed as mercury metal).
 Regulation (EU) 2023/1542 of the European Parliament and of the Council of 12 July 2023 concerning batteries and waste batteries.
 Canadian Products Containing Mercury Regulations (SOR/2014-254); 5 ppm in homogenous material of batteries
 Chinese Standard GB 24427-2009: 1 ppm in batteries

Phenylmercury compound are restricted in articles (0.01 %) in

⁷ The RoHS substance restrictions apply to every individual homogenous material in the part. Exemptions for product category 1-7 and 10 are given in Appendix 1

Annex XVII, Regulation (EC) No 1907/2006, REACH, entry 62.

Products containing mercury may not be placed on the Swedish market.

Norway prohibits the manufacture, import, export and sale of articles that contain mercury or mercury compounds (0.001% (10 ppm).

Denmark prohibits the import, export and sale of articles and part of articles that contain mercury or mercury compounds (0.01% (100 ppm).

Regulation (EU) 2017/852 of the European Parliament and of the Council of 17 May 2017 on mercury restricts the export, import, use, storage and manufacturing of mercury.

Mercury is under restriction globally through the Minamata Convention.

The sum of concentration levels of lead, cadmium, mercury and hexavalent chromium present in packaging or packaging components shall not exceed 100 ppm by weight
Directive (EC) No 94/62/EC of 20 December 1994 on packaging and packaging waste

Mercury and its compounds are listed in the Rotterdam convention.

In California: Mercury is listed in Proposition 65.

Test method:

IEC 62321-4

ISO 19050 (rubber)

Test equipment: 1) XRF. 2) AAS, ICP-MS and ICP-OES

LOQ: 1) 50 mg/kg. 2) 10 mg/kg

Nickel (Ni) in skin contact

Required limit value:	0.5 µg per cm ² and week for products intended to come into direct and prolonged contact with the skin.
CAS RN:	Nickel (metal): 7440-02-0
Properties:	Nickel is one of the most common substances that cause contact dermatitis. Highly allergenic (strong skin sensitizer).
Use:	Example application for prolonged skin contact is an ear bud (headphone), mobile phone.
Comments:	Refrain from using nickel-treated metals or nickel-containing metal coatings.
Legal limit:	0.5 µg per cm ² and week for products intended to come into direct and prolonged contact with the skin. Annex XVII of Regulation (EC) No 1907/2006 of the European Parliament and of the Council (REACH), entry 27. In California: Metallic nickel is listed in Proposition 65.
Test method:	Test method I: EN 12472:2020 and EN 1811:2023 (for coated items) 1811:2023 (for non-coated item). Detection limit I: 0.01 µg/cm ² /week Test method II: Screening test for nickel emission. Swedish pharmacies sell a test kit. Detection limit II: Qualitative indication only = no occurrence. (This screening method can also give a reading for other metals than Ni.)

Perchlorates

Required limit value:	60 ppm in batteries.
CAS RN:	Perchlorate; 14797-73-0
Properties:	Perchlorate is a strong oxidiser and explosive
Use:	Lithium batteries; coin cell batteries
Legal limit:	60 ppm in batteries. California Assembly Bill No. 826 - Perchlorate Contamination Prevention Act (Labelling requirement). Several regions have restrictions regarding transports of lithium batteries.
Test method:	No standardised test method available. Test equipment: LC-MS

PFAS - Highly fluorinated carboxylic acids (PFOA and related substances)

Required limit value:	Should not be present in products.
CAS RN:	Several, including: 335-67-1
Properties:	Highly fluorinated carboxylic acids (PFCAs) such as PFOA are persistent, bioaccumulative and toxic (PBT) substances. PFOA is a carcinogen.
Uses (examples):	<p>Per and polyfluorinated chemicals (PFAS) are surfactants, stable, temperature-resistant and water- and grease-repellent substances.</p> <ul style="list-style-type: none">• Fluoropolymers (PVDF) for Li ion batteries• Superconductors• Antireflection layers for displays• Nonfoaming surfactants for metal electrowinning• Liquid crystal display retardation films• Anti-bleed agents for adhesives in semiconductor devices• Surfactants in ink for printers / photocopy machines• Cationic surfactant for electro deposition of tin. <p>Degradation products from additives in cleaning agents, fire extinguishing agents, metal plating and impregnation agents in leather and textiles. PFOA is used as an emulsifier in the production of fluoropolymers such as polytetrafluoroethylene (PTFE) fluoroethylene propylene (FEP), polyvinylidene fluoride (PVDF) etc.</p>
Legal background:	<p>Legal limit: Shall not occur</p> <p>PFOA, its salts and related compounds are listed in the Stockholm Convention on Persistent Organic Pollutants (POPs) and banned in EU by the POPs Regulation (EU) No 2019/1021. Residues below 0.025 mg/kg of each substance, and 1 mg/kg of a combination of PFOA-related substances in substances, mixtures, and articles are allowed to be placed on the market and used, as these are amounts that may be present as impurities.</p> <p>Perfluoroheptanoic acid and its salts as well as long chain PFCAs (C8-C14) including their salts (sodium and ammonium) and precursors are listed in the Candidate List (REACH). Listed below:</p> <ul style="list-style-type: none">- Ammonium perfluoroheptanoate, 6130-43-4- Potassium perfluoroheptanoate, 21049-36-5- Perfluoroheptanoic acid, 375-85-9- Sodium perfluoroheptanoate, 20109-59-5

(C8) Pentadecafluorooctanoic acid (PFOA), 335-67-1 and its Ammonium salt (APFO), 3825-26-1,
(C9) Perfluorononan-1-oic-acid (PFNA) and its sodium and ammonium salts, 375-95-1, 21049-39-8, 4149-60-4, 4 and
(C10) Nonadecafluorodecanoic acid (PFDA) and its sodium and ammonium salts, 335-76-2, 3108-42-7, 3830-45-3, (C11) Henicosafluoroundecanoic acid (PFUnA), 2058-94-8 (C12) Tricosafluorododecanoic acid (PFDoA), 307-55-1,
(C13) Pentacosafuorotridecanoic acid (PFTrDA), 72629-94-8,
(14) Heptacosafuorotetradecanoic acid (PFTA), 376-06-7,

C9-C14 linear and/or branched perfluorocarboxylic acids (C9-C14 PFCAs), their salts and C9-C14 PFCAs-related substances, are restricted in articles (25 ppb) annex XVII Regulation (EC) No 1907/2006 (REACH), entry 68.
(3,3,4,4,5,5,6,6,7,7,8,8,8-tridecafluorooctyl) silanetriol is restricted in spray products (2 ppb) annex XVII Regulation (EC) No 1907/2006 (REACH), entry 73.

In France: The substances on the Candidate List are included under the AGECL legislation (LOI n° 2020-105).

Declaration duty in Sweden to the Swedish Chemicals Agency for PFAS in chemical products that are deliberately added. Composition needs not to be specified but the information duty applies without any concentration limit.

In California: PFOA and Perfluorononanoic Acid (PFNA) and its salts are listed in Proposition 65.

Test method:

IEC 62321-3-2 (Screening – Fluorine by combustion-ion chromatography (C-IC))
No standardised test method available.
Test equipment: LC-MS
LOQ: 10 µg/kg.

Phthalate esters

Required limit value:	0.1% by weight (1000 mg/kg) in the material of interest.
CAS RN:	Various, se appendix 8
Properties:	Many phthalates are classified as toxic for reproduction DIDP is of concern in connection with hepatic toxicity. Many phthalates are suspected endocrine disrupters.
Use:	Phthalates may be used as plasticizers in polymers. Additives in adhesives, paints, lacquers, varnishes and solvents.
Comments:	Alternative plasticizers include citrates, sebacates, adipates, and phosphates etc. The terephthalate, DEHT and the cyclohexane DINCH are example of commercially available alternatives with low human and environmental toxicity. There are also plastics that do not require phthalates.
Legal background:	<p>1000 ppm in homogenous material for DEHP, DBP, BBP and DIBP, Directive 2011/65/EC of the European Parliament and of the Council (RoHS) on the restriction of the use of certain hazardous substances in electrical and electronic equipment.</p> <p>Phthalate ester substances listed in both Annex XIV and/ or the Candidate List (REACH) is found in Appendix 8</p> <p>All phthalates in toys and childcare articles for children aged 0-3 years are restricted (0.05%) in Denmark (BEK nr 855).</p> <p>In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).</p> <p>In California: DEHP, BBP, DBP, DnHP, DIDP and DINP are listed in Proposition 65. Safe Harbor Limit: NSRL BBP 1200 µg/day (oral), DINP 146 µg/day. Safe Harbor Limit: DEHP, NSRL 310 µg/day (oral).. Safe Harbor Limit: MADL DBP 8.7 µg/day, DnHP 2200 µg/day (oral), DIDP 2200 µg/day.</p> <p>Several phthalates uses are declarable according to EU Medical Device Directive 93/42/EEC (amendment 2007/47/EC), if parts of a device (or a device itself) is intended to administer and/or remove medicines, body liquids or other substances to or from the body, or devices intended for transport and storage of such body fluids or substances)</p>

Test method:

IEC 62321-8

IEC 62321-3-3 and -3-4

IEC 62321-12 (GC-MS)

EN-ISO 14389

Test equipment: GC-MS, LC-MS

LOQ: 50 mg/kg

1,3-propanesultone

Required limit value:	Should not be present in products.
CAS RN:	1120-71-4
Properties:	Carcinogenic.
Use:	Electrolyte fluid of lithium ion batteries.
Comments:	When heated to decomposition, it emits toxic fumes of sulphur oxides.
Legal background:	<p>Legal limit: 0.1% by weight</p> <p>1,3-propanesultone is listed in the Candidate List (REACH).</p> <p>In France: The substances on the Candidate List are included under the AGECL legislation (LOI n° 2020-105).</p> <p>In California: 1,3-propanesultone is listed in Proposition 65. Safe Harbor Limit: NSRL 0.3 µ/day.</p>
Test method:	<p>No standardised test method available.</p> <p>Test equipment: GC-MS, LC-MS, GC-ECD</p>

Siloxanes

Required limit value:	1000 mg/kg (0.1% by weight)
CAS RN:	556-67-2 Octamethylcyclotetrasiloxane (D4) 541-02-6 Decamethylcyclopentasiloxane (D5) 540-97-6 Dodecamethylcyclohexasiloxane (D6)
Properties:	Reproduction toxic. Toxic to aquatic life with long lasting effects.
Use:	Paper and cardboard products, electronic equipment e.g. semiconductors. Precursors in the production of polymers, such as silicone rubbers. Sealants for construction.
Legal limit:	D4, D5 and D6 are listed in the Candidate List (REACH). In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).
Test method:	No standardised test methods Test equipment: GC-MS LOQ: 100 mg/kg

Tantalum

Required limit value:	Tantalum originated from conflict areas should not be present in products.
CAS RN:	7440-25-7
Properties:	Highly corrosion-resistant and chemical inert. Conflict mineral
Use:	Ta-capacitors.
Comments:	Assure and promote ethical and responsible sourcing of Tantalum. In some application Platinum can be a substitute.
Legal background:	<p>Regulation (EU) 2017/821 of the European Parliament and of the Council of 17 May 2017 laying down supply chain due diligence obligations for Union importers of tin, tantalum and tungsten, their ores, and gold originating from conflict-affected and high-risk areas.</p> <p>Section 1502 of the Dodd–Frank Wall Street Reform and Consumer Protection Act (USA)</p>
Test method:	<p>No standardised test method available.</p> <p>Test equipment: XRF, AAS, ICP</p>

Tin

Required limit value:	Tin originated from conflict areas should not be present in products.
CAS RN:	7440-31-5
Properties:	Alloy metal. Corrosion resistant. Conflict mineral.
Use:	Solder. Metal plating.
Comments:	Assure and promote ethical and responsible sourcing of Tin.
Legal background:	<p>Regulation (EU) 2017/821 of the European Parliament and of the Council of 17 May 2017 laying down supply chain due diligence obligations for Union importers of tin, tantalum and tungsten, their ores, and gold originating from conflict affected and high-risk areas.</p> <p>Section 1502 of the Dodd–Frank Wall Street Reform and Consumer Protection Act (USA)</p>
Test method:	<p>No standardised test method available.</p> <p>Test equipment: XRF, AAS, ICP.</p>

Tungsten

Required limit value:	Tungsten originated from conflict areas should not be present in products.
CAS RN:	7440-33-7
Properties:	Robust and hard mineral with high melting point. Conflict mineral.
Use:	Used in light bulb filaments, X-ray tubes (as both the filament and target), electrodes in TIG welding, superalloys, and radiation shielding.
Comments:	Tungsten is also known as wolfram. Assure and promote ethical and responsible sourcing of Tungsten.
Legal background:	<p>Regulation (EU) 2017/821 of the European Parliament and of the Council of 17 May 2017 laying down supply chain due diligence obligations for Union importers of tin, tantalum and tungsten, their ores, and gold originating from conflict-affected and high-risk areas.</p> <p>Section 1502 of the Dodd–Frank Wall Street Reform and Consumer Protection Act (USA)</p>
Test method:	<p>No standardised test method available.</p> <p>Test equipment: XRF, AAS, ICP.</p>

UV stabilisers

Required limit value:	Should not be present in products.
CAS RN:	<p>2-benzotriazol-2-yl-4,6-di-tert-butylphenol (UV-320); 3846-71-7</p> <p>2,4-di-tert-butyl-6-(5-chlorobenzotriazol-2-yl)phenol (UV-327); 3864-99-1</p> <p>2-(2H-benzotriazol-2-yl)-4,6-ditertpentylphenol (UV-328); 25973-55-1</p> <p>2-(2H-benzotriazol-2-yl)-4-(tert-butyl)-6-(sec-butyl)phenol (UV-350); 36437-37-3</p> <p>2-(2H-benzotriazol-2-yl)-4-(1,1,3,3-tetramethylbutyl)phenol (UV-329), 3147-75-9</p> <p>Bumetrizole (UV-326) 3896-11-5</p> <p>6,6'-di-tert-butyl-2,2'-methylenedi-p-cresol (DBMC); 119-47-1</p>
Properties:	<p>Persistent, Bioaccumulative and Toxic</p> <p>Very Persistent and very Bioaccumulative</p>
Use:	<p>UV-stabilizer for plastics, polyurethanes and rubber and constituent in formulations used for coating of surfaces, e.g. cars or special industrial wood coatings. Also used in dishwasher detergents, dry cleaning equipment, and de-icing/anti-icing fluids.</p> <p>DBMC is an antioxidant and/or stabilizers used in plastic and rubber.</p>
Legal background:	<p>UV-320, UV-326, UV-327, UV-328, UV-328, UV-350 and DBMC are listed both in the Candidate List (REACH).</p> <p>In France: The substances on the Candidate List are included under the AGECE legislation (LOI n° 2020-105).</p>
Test method:	<p>No standardised test method available.</p> <p>Test equipment: GC-MS, LC-MS, GC-ECD</p> <p>LOQ: 50 mg/kg (benzotriazoles)</p> <p>LOQ: 100 mg/kg (DBMC)</p>

BIOCIDAL AGENTS

General information

Biocidal agents are both used as *process chemicals* to prohibit growth of microbes during production and as *product related chemicals* to render biocidal property to the article. The use of biocidal products in articles should be kept limited, for instance to avoid the increase of resistant bacteria. If the use of biocidal agents is essential, there are biocidal agents approved for PT9 (product type 9, that includes textiles, polymers and leather) according to the Biocidal Product Regulation (EU 528/2012).

Cu-HDO (Bis-(N-cyclohexyldiazeniumdioxy) –copper)

Required limit value:	Should not be present in products.
CAS RN:	312600-89-8
Properties:	Fungicide. Cu-HDO is classified as very toxic to aquatic organisms.
Use:	Fungicide mainly as wood preservatives, but may occur in fungicidal coating of textile-polymeric materials.
Comments:	<p>The alternative to biocidal agents during storage and transport is a cool and dry environment.</p> <p>If use of biocidal agents is essential, folpet, chlorocresol, propiconazole, azoxystrobin and fludioxonil are approved for PT9 according to the Biocidal Product Regulation (EU 528/2012).</p>
Legal background:	Cu-HDO is banned within PT9 (product type 9) that includes textiles, polymers and leather, according to the Biocidal Product Regulation (EU 528/2012)
Test method:	No standardised test method available. LOQ: -

Carbendazim

Required limit value:	Should not be present in products.
CAS RN:	10605-21-7
Properties:	Fungicide. Reproduction toxic, mutagenic and toxic to aquatic life with long lasting effects and processes.
Use:	To counteract fungus growth.
Alternatives:	The alternative to biocidal agents during storage and transport is cool and dry environment. If use of biocidal agents is essential, folpet, chlorocresol, propiconazole, azoxystrobin and fludioxonil are approved for PT9 according to the Biocidal Product Regulation (EU 528/2012).
Legal background:	Carbendazim is banned within PT9 (product type 9) that includes textiles, polymers, and leather, according to the Biocidal Product Regulation (EU 528/2012)
Test method:	No standardised test method available. Test equipment: GC-MS, LC-MS. LOQ: -

Dimethylfumarate (DMFu)

Required limit value:	Should not be present in products.
CAS RN:	624-49-7
Properties:	Fungicide. DMFu is harmful to skin and a strongly allergenic (skin sensitizer) substance.
Use:	To counteract fungus growth in clothes, shoes and other leather items. DMFu can e.g. be found in silica gel bags, but is also applied on the product both as a powder and in tablet form.
Comments:	The alternative to biocidal agents during storage and transport is cool and dry environment. If use of biocidal agents is essential, folpet, chlorocresol, propiconazole, azoxystrobin and fludioxonil are approved for PT9 according to the Biocidal Product Regulation (EU 528/2012).
Legal background:	Legal limit: 0.00001 % by weight (0.1 mg/kg) in articles or any parts thereof. Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 61.
Test method:	ISO/TS 16186 Test equipment: GC-MS, LC-MS. LOQ: 0.1 mg/kg.

Guanidine, N,N'''-1,6-hexanediylbis[N'-cyano-, polymer with 1,6-hexanediamine, hydrochloride (PHMB)

Required limit value:	Should not be present in products.
CAS RN:	27083-27-8, 32289-58-0, 1802181-67-4
Properties:	Bactericide. PHMB is very toxic to aquatic life, is suspected of causing cancer and may cause an allergic skin reaction (skin sensitizer)
Use:	Biocide, bactericide.
Comments:	The alternative to biocidal agents during storage and transport is a cool and dry environment.
Legal background:	PHMB is banned within PT9 (product type 9) that includes textiles, polymers and leather, according to the Biocidal Product Regulation (EU 528/2012)
Test method:	No standardised test method available. Test equipment: LC-MS

Pentachlorophenol (PCP) and all isomers of Tetrachlorophenols (TeCP)

Required limit value:	Should not be present in products.
CAS RN:	87-86-5 (PCP), 131-52-2 (PCP sodium salt), 935-95-5, 4901-51-3, 58-90-2 (isomers of TeCP)
Properties:	Fungicide. Organic compounds. Toxic and dangerous for the environment. On combustion, PCP emits dioxins, which are extremely toxic to humans.
Use:	<p>Fungicide for preservative treatment of goods prior to storage and transport.</p> <p>Preservative in sizing agents and adhesives. Component in printing pastes (thickener).</p>
Comments:	The alternative to biocidal agents during storage and transport is a cool and dry environment. If use of biocidal agents is essential, folpet, chlorocresol, propiconazole, azoxystrobin and fludioxonil are approved for PT9 according to the Biocidal Product Regulation (EU 528/2012).
Legal background:	<p>Legal limit: PCP and its salts and esters shall not occur. Pentachlorophenol and its salts and esters are listed in the Stockholm Convention on Persistent Organic Pollutants (POPs) and banned in EU by the POPs Regulation (EU) No 2019/1021. Residues below 5 mg/kg in substances, mixtures, and articles are allowed to be placed on the market and used, as this is the amount that may be present as an impurity in an article.</p> <p>Pentachlorophenol is listed in the Rotterdam convention.</p> <p>In California: PCP is listed in Proposition 65. Safe Harbor Limit: NRSL 40 µg/day.</p>
Test method:	<p>ISO 17070 (leather)XP G 08-015 (French standard method for PCP in textiles).</p> <p>LOQ: 0.1 mg/kg</p> <p>CEN/TR 14823 (wood).</p> <p>EN ISO 15320 (Pulp, paper and board)</p>

Permethrin

Required limit value:	Should not be present in products.
CAS RN:	52645-53-1
Properties:	Insecticide. Permethrin is like all synthetic pyrethroids a neurotoxin. It is considered more acutely toxic to children than to adults. Allergenic (skin sensitizer).
Use:	Permethrin is a biocide in textiles and leather. It is also used for home pest control, forestry, and in public health programs, including head lice control.
Comments:	The alternative to biocidal agents during storage and transport is a cool and dry environment.
Legal background:	Permethrin is not on the active substance list for product-type 9 and thus not allowed to use in textiles, polymers and leather according to the Biocidal Product Regulation (EU 528/2012).
Test method:	No standardised test method available. EN ISO 22517:2021 (pesticide residues in leather). Test equipment: GC-MS, LC-MS. LOQ: 5 mg/kg

Silver and its compounds

Required limit value:	Should not be present in products.
CAS RN:	Silver (metal): 7440-22-4
Properties:	<p>Bactericide. Slight skin and eye irritant. Disturb denitrification processes in nature that is vital for provision of nutrition to plants.</p> <p>Dissolved (free) silver ions are very toxic to aquatic organisms.</p>
Use:	Silver particle complexes in nano size (< 100nm) are antibiotic additives in plastics and fibres.
Comments:	The alternative to antibacterial agents during use is satisfactory washing.
Legal background:	<p>Legal limit: No legal limits for silver compounds exist in textiles and leather.</p> <p>Some silver compounds are on the list of temporarily permitted existing biocides within PT9 (product type 9) that includes textiles, polymers and leather, according to the Biocidal Product Regulation (EU 528/2012).</p> <p>Silver as such, silver as a nanomaterial (CAS RN 7440-22-4) and Reaction mass of titanium dioxide and silver chloride are not allowed as a biocidal active substances.</p>
Test method:	<p>No standardised test method available.</p> <p>Test equipment: ICP-MS, ICP-OES or AAS</p> <p>LOQ: 10 mg/kg</p>

Tri-substituted organostannic compounds

Required limit value:	Should not be present in products.
CAS RN:	<p>Triphenyltin hydroxide: 76-87-9 Tributyltin oxide (TBTO): 56-35-9 Tributyltin chloride: 1461-22-9 Tributyltin fluoride: 1983-10-4 Tributyltin methacrylate: 2155-70-6 Tributyltin benzoate: 4342-36-3 Tributyltin linoleate: 24124-25-2 Tributyltin naphthenate: 85409-17-2 etc</p>
Properties:	<p>Bactericides. Tributyltin compounds are different chemical substances that are toxic and dangerous for the environment. Bioaccumulative and persistent.</p>
Comments:	<p>The alternative to antibacterial agents during use is satisfactory washing. If use of biocidal agents is essential, folpet, chlorocresol, propiconazole, azoxystrobin and fludioxonil are approved for PT9 according to the Biocidal Product Regulation (EU 528/2012).</p>
Legal background:	<p>Legal Limit: 0.1% by weight All tri-substituted organostannic compounds such as tributyltin (TBT) are restricted in articles in annex XVII of the Regulation (EC) No 1907/2006 of the European Parliament and of the Council (REACH). The seven TBT compounds listed above are also included in the Rotterdam convention.</p> <p>Tributyltin oxide (TBTO), 56-35-9 and Dibutyltin dichloride (DBTC), 683-18-1 are listed on the Candidate List (REACH)</p> <p>In France: The substances on the <u>Candidate List</u> are included under the AGECL legislation (LOI n° 2020-105).</p>
Test method:	<p>No standardised test method available. Test equipment: GC-MS. LOQ: 0.2 mg/kg EN ISO17353 (water and sediment) EN ISO 22744 (textile)</p>

Triclosan and Triclocarban

Required limit value:	Should not be present in products.
CAS RN:	Triclosan: 3380-34-5, Triclocarban: 101-20-2
Properties:	Bactericides. Triclosan is classified as a probable human carcinogen and bio accumulative.
Use:	Anti-bacterial agent in clothes and other commodities.
Comments:	The alternative to antibacterial agents during use is satisfactory washing.
Legal background:	Triclosan is banned within PT9 (product type 9) that includes textiles, polymers and leather, according to the Biocidal Product Regulation (528/2012) Triclocarban is not on the active substance list for any product type and thus not allowed to use in EU.
Test method:	No standardised test method available. Test equipment: GC-MS, LC-MS. LOQ: 10 mg/kg

Zincpyrithion

Required limit value:	Should not be present in products.
CAS RN:	13463-41-7
Properties:	Bactericide, fungicide and algicide. Toxic to Reproduction.
Use:	Antibacterial and fungicide agent in articles. Commonly used in shampoo and previously in antifouling paint. May be used in plastic articles.
Comments:	The alternative to antibacterial agents during use is satisfactory washing. If use of biocidal agents is essential, folpet, chlorocresol, propiconazole, azoxystrobin and fludioxonil are approved for PT9 according to the Biocidal Product Regulation (EU 528/2012).
Legal background:	Zincpyrithion is on the list of temporarily permitted existing biocides within PT9 (product type 9) that includes textiles, polymers and leather, according to the Biocidal Product Regulation (EU 528/2012).
Test method:	No standardised test method available. Test equipment: GC-MS, LC-MS. LOQ: 1000 mg/kg (100 mg/kg as for Zinc)

MISCELLANEOUS

Synthetic polymer microparticles

Limit value:	Shall not be placed on the market.
Comments:	The microplastics restriction concerns synthetic polymer microparticles - better known as microplastics - on their own or intentionally added to mixtures. Articles are not in the scope. The purpose of banning microplastics, which includes glitter, is to reduce the environmental pollution and risk to the environment that they cause.
Legal background:	Annex XVII of Regulation (EC) No 1907/2006 (REACH), entry 78
Test method:	No standardised test method available.

Proposition 65 in California: Other chemicals listed

There are chemicals listed in Proposition 65 that are relevant to the materials addressed in this Chemicals guidance, but that are not otherwise included in this document. Those substances are listed in the table below. Please, note that Proposition 65 is a Californian legislation that does not apply in Europe.

Chemicals related to dyestuffs

Substance name	CAS RN	Comment
Aniline	62-53-3	NSRL: 100 µg/day
Benzyl violet 4B	1694-09-3	NSRL: 30 µg/day
Carbon black (airborne, unbound particles of respirable size)	1333-86-4	No Safe Harbor Limit
C.I. Acid Red 114	6459-94-5	No Safe Harbor Limit
C.I. Direct Blue 15	2429-74-5	No Safe Harbor Limit
Ethylene dichloride (1,2-Dichloroethane)	107-06-2	NSRL: 10 µg/day
Ethylene oxide	75-21-8	NSRL: 2 µg/day MADL: 20 µg/day
Trypan blue (commercial grade)	72-57-1	No Safe Harbor Limit
Hexachlorobenzene	118-74-1	NSRL: 0.4 µg/day

Chemicals related to materials

Substance name	CAS RN	Comment
Antimony oxide (Antimony trioxide)	1309-64-4	Flame retardant synergist, No Safe Harbor Limit
Dichloromethane (Methylene chloride)	75-09-2	Triacetate, (NSRL): 50 µg/day NSRL- Inhalation: 200 µg/day
Glycidyl methacrylate	106-91-2	No Safe Harbor Limit
N-Nitrosodimethylamine	62-75-9	Rubber, NSRL: 0.04 µg/day

Indium tin oxide (ITO)	50926-11-9	Electronic devices, liquid crystal displays
		No Safe Harbor Limit
1,1,1-Trichloroethane	71-55-6	No Safe Harbor Limit

Biocides

Substance name	CAS RN	Comment
Metham sodium	137-42-8	No Safe Harbor Limit
o-Phenylphenate, sodium	132-27-4	NSRL: 200 µg/day
o-Phenylphenol	90-43-7	No Safe Harbor Limit
2,4,6-Trichlorophenol	88-06-2	NSRL: 10 µg/day
Methyl bromide, as a structural fumigant	74-83-9	MADL - Inhalation: 810 µg/day

Appendix 1 – Exemptions in RoHS

All Current Annex III Exemptions Aug 2021 (regards product category 1-7 and 10 and 11 if no other stated). Exemptions that still appear in the list with passed expire dates, are not yet decided if exempted or restricted.

- 1 - Mercury in single capped (compact) fluorescent lamps not exceeding (per burner):
 - 1(f) I - For special purposes (UV spectrum): 5 mg. Expires on 24 February 2027 (category 5).
 - 1(f) I - For special purposes: 5 mg. Expires on 24 February 2025 (category 5).
 - 1 (g)- For general lighting purposes < 30 W with a lifetime equal or above 20,000 h: 3.5 mg
Expires on 24 August 2023
- 2(a) - Mercury in double-capped linear fluorescent lamps for general lighting purposes not exceeding (per lamp):
 - 2(a)(1) - Tri-band phosphor with normal lifetime and a tube diameter < 9 mm (e.g. T2): 4 mg.
Expires on 24 February 2023 (category 5).
 - 2(a)(2) - Tri-band phosphor with normal lifetime and a tube diameter ≥ 9 mm and ≤ 17 mm (e.g. T5): 3 mg. Expires on 24 August 2023 (category 5).
 - 2(a)(3) - Tri-band phosphor with normal lifetime and a tube diameter > 17 mm and ≤ 28 mm (e.g. T8): 3,5 mg. Expires on 24 August 2023 (category 5).
 - 2(a)(4) - Tri-band phosphor with normal lifetime and a tube diameter > 28 mm (e.g. T12): 3,5 mg. Expires on 24 February 2023 (category 5).
 - 2(a)(5) - Tri-band phosphor with long lifetime ($\geq 25\ 000$ h): 5 mg. Expires on, 21 July 2016, 24 February 2023 (category 5).
- 2(b) - Mercury in other fluorescent lamps not exceeding (per lamp):
 - 2(b)(3) - Non-linear tri-band phosphor lamps with tube diameter > 17 mm (e.g. T9). 15 mg.
Expires on 24 February 2025 (category 5).
 - 2(b)(4)-I-III - Lamps for other general lighting and special purposes (e.g. induction lamps); various. Expires on, 24 February 2025 vs 2027 (category 5).
- 3 - Mercury in cold cathode fluorescent lamps and external electrode fluorescent lamps (CCFL and EEFL) for special purposes not exceeding (per lamp):
 - 3(a) - Short length (≤ 500 mm). 3,5 mg. Expires on 24 February 2025 (category 5).
 - 3(b) - Medium length (> 500 mm and $\leq 1\ 500$ mm); 5 mg. Expires on 24 February 2025 (category 5).
 - 3(c) - Long length (> 1 500 mm). 13 mg. Expires on 24 February 2025 (category 5).
- 4(a) I - Mercury in other low pressure discharge lamps (per lamp). 15 mg. Expires 24 February 2023, 24 February 2027 (category 5).
- 4(b) - Mercury in High Pressure Sodium (vapour) lamps for general lighting purposes not exceeding (per burner) in lamps with improved colour rendering index $R_a > 60$:
 - 4(b)-I $P \leq 155$ W.; 30 mg. Expires on 24 February 2027 (category 5).
- 4(c) - Mercury in other High Pressure Sodium (vapour) lamps for general lighting purposes not exceeding (per burner):
 - 4(c)-I $P \leq 155$ W; 25 mg. Expires on 24 February 2027 (category 5).
 - 4(c)-II $155\text{ W} < P \leq 405\text{ W}$; 30 mg. Expires on 24 February 2027 (category 5).
 - 4(c)-III - $P > 405\text{ W}$.; 40 mg. Expires on 24 February 2027 (category 5).
- 4(e) - Mercury in metal halide lamps (MH). Expires on 24 February 2027 (category 5).
- 4(f) I-III - Mercury in other discharge lamps for special purposes not specifically mentioned in this Annex. Expires on 24 February 2025/2027 (specifically cases for category 5).
- 5(a) - Lead in glass of cathode ray tubes. Applies to category 11 and expires 21 July 2024.
- 5(b) - Lead in glass of fluorescent tubes not exceeding 0,2 % by weight. Expires on 21 July 2024.

6(a)-I Lead as an alloying element in steel for machining purposes containing up to 0,35 % lead by weight and in batch hot dip 94alvanized steel components containing up to 0,2 % lead by weight. Expires 17 January 2020

6(b)-I Lead as an alloying element in aluminium containing up to 0,4 % lead by weight, provided it stems from lead-bearing aluminium scrap recycling. Expires on 21 July 2024.

6(b)-II Lead as an alloying element in aluminium for machining purposes with a lead content up to 0,4 % by weight. Expires on 18 May 2021

6(c) - Copper alloy containing up to 4 % lead by weight. Expires on 21 July 2024.

7(a) - Lead in high melting temperature type solders (i.e. lead- based alloys containing 85 % by weight or more lead), except applications covered by point 24. Expires on 21 July 2024.

7(b) - Lead in solders for servers, storage and storage array systems, network infrastructure equipment for switching, signalling, transmission, and network management for telecommunications. Applies to category 11 and expires 21 July 2024

7(c)-I - Electrical and electronic components containing lead in a glass or ceramic other than dielectric ceramic in capacitors, e.g. piezoelectronic devices, or in a glass or ceramic matrix compound, (except applications covered under point 34). Expires on 21 July 2024.

7(c)-II - Lead in dielectric ceramic in capacitors for a rated voltage of 125 V AC or 250 V DC or higher. Does not apply to applications covered by point 7(c)-I and 7(c)-IV of this Annex. Expires on 21 July 2024.

7(c)-III - Lead in dielectric ceramic in capacitors for a rated voltage of less than 125 V AC or 250 V DC. may be used in spare parts for EEE placed on the market before 1 January 2013

7(c)-IV - Lead in PZT based dielectric ceramic materials for capacitors being part of integrated circuits or discrete semiconductors. Expires on 21 July 2024 for category 11.

8(b) - Cadmium and its compounds in electrical contacts. Applies to category 11 and expires 21 July 2024

8(b)-I Cadmium and its compounds in electrical contacts used in:

- circuit breakers;
- thermal sensing controls;
- thermal motor protectors (excluding hermetic thermal motor protectors);
- AC switches rated at:
 - 6 A and more at 250 V AC and more; or
 - 12 A and more at 125 V AC and more;
- DC switches rated at 20 A and more at 18 V DC and more; and
- switches for use at voltage supply frequency ≥ 200 Hz.

Expires on 21 July 2021

9 - Hexavalent chromium as an anticorrosion agent of the carbon steel cooling system in absorption refrigerators up to 0,75 % by weight in the cooling solution. Applies to category 11 and expires 21 July 2024

9(a)-II - Up to 0,75% hexavalent chromium by weight, used as an anticorrosion agent in the cooling solution of carbon steel cooling systems of absorption refrigerators:

- designed to operate fully or partly with electrical heater, having an average utilised power input ≥ 75 W at constant running conditions;
- designed to fully operate with non-electrical heater.

Expires on 21 July 2021 for categories 1-7 and 10.

'9(a)-III - Up to 0,7 % hexavalent chromium by weight, used as an anticorrosion agent in the working fluid of the carbon steel sealed circuit of gas absorption heat pumps for space and water heating.

Applies to category 1 and expires on 31 December 2026.'

9(b) - Lead in bearing shells and bushes for refrigerant-containing compressors for heating, ventilation, air conditioning and refrigeration (HVACR) applications. Applies to category 11; expires on 21 July 2024.

13(a) - Lead in white glasses used for optical applications. Expires on 21 July 2024.

13(b) - Cadmium and lead in filter glasses and glasses used for reflectance standards. Applies to category 11 and expires 21 July 2024

13(b)-(I) Lead in ion coloured optical filter glass types
Expires on 21 July 2024

13(b)-(II) Cadmium in striking optical filter glass types; excluding applications falling under point 39 of this Annex. Expires on 21 July 2021

13(b)-(III) Cadmium and lead in glazes used for reflectance standards. Expires on 21 July 2021

15 - Lead in solders to complete a viable electrical connection between semiconductor die and carrier within integrated circuit flip chip packages. Applies to category 11 and expires 21 July 2024

15(a) Lead in solders to complete a viable electrical connection between the semiconductor die and carrier within integrated circuit flip chip packages where at least one of the following criteria applies:

- a semiconductor technology node of 90 nm or larger;
- a single die of 300 mm² or larger in any semiconductor technology node;
- stacked die packages with die of 300 mm² or larger, or silicon interposers of 300 mm² or larger. Expires on 21 July 2021. Expires on 21 July 2024 for category 11

17 Lead halide as radiant agent in high intensity discharge (HID) lamps used for professional reprography applications. Applies to category 11 and expires 21 July 2024

18(b) - Lead as activator in the fluorescent powder (1 % lead by weight or less) of discharge lamps when used as sun tanning lamps containing phosphors such as BSP (BaSi 2 O 5 :Pb). Expires on 21 July 2021. Expires on 21 July 2024 for category 11

21 - Lead and cadmium in printing inks for the application of enamels on glasses, such as borosilicate and soda lime glasses. Expires on 21 July 2024 for category 11.

24 - Lead in solders for the soldering to machined through hole discoidal and planar array ceramic multilayer capacitors. Expires on 21 July 2024.

25 - Lead oxide in surface conduction electron emitter displays (SED) used in structural elements, notably in the seal frit and frit ring. Applies to category 11 and expires 21 July 2024

29 - Lead bound in crystal glass as defined in Annex I (Categories 1, 2, 3 and 4) of Council Directive 69/493/EEC. Applies to category 11 and expires on 21 July 2024.

30 - Cadmium alloys as electrical/mechanical solder joints to electrical conductors located directly on the voice coil in transducers used in high-powered loudspeakers with sound pressure levels of 100 dB (A) and more. Applies to category 11 and expires 21 July 2024

31 - Lead in soldering materials in mercury free flat fluorescent lamps (which, e.g. are used for liquid crystal displays, design or industrial lighting). Applies to category 11 and expires 21 July 2024

32 - Lead oxide in seal frit used for making window assemblies for Argon and Krypton laser tubes. Expires on 21 July 2021. Expires on 21 July 2024 for category 11

33 - Lead in solders for the soldering of thin copper wires of 100 µm diameter and less in power transformers. Applies to category 11 and expires 21 July 2024

34 - Lead in cermet-based trimmer potentiometer elements. Expires on 21 July 2024.

37 - Lead in the plating layer of high voltage diodes on the basis of a zinc borate glass body. Applies to category 11 and expires 21 July 2024

38 - Cadmium and cadmium oxide in thick film pastes used on aluminium bonded beryllium oxide Applies to category 11 and expires 21 July 2024

39(a) Cadmium selenide in downshifting cadmium-based semiconductor nanocrystal quantum dots for use in display lighting applications (< 0,2 µg Cd per mm² of display screen area)
Expires for all categories on 31 October 2019

42 - Lead in bearings and bushes of diesel or gaseous fuel powered internal combustion engines applied in non-road professional use equipment:

-with engine total displacement ≥ 15 litres;

or

-with engine total displacement < 15 litres and the engine is designed to operate in applications where the time between signal to start and full load is required to be less than 10 seconds; or regular maintenance is typically performed in a harsh and dirty outdoor environment, such as mining, construction, and agriculture applications.

Applies to category 11, excluding applications covered by entry 6(c) of this Annex.

Expires on 21 July 2024.

43 - Bis(2-ethylhexyl) phthalate in rubber components in engine systems, designed for use in equipment that is not intended solely for consumer use and provided that no plasticised material comes into contact with human mucous membranes or into prolonged contact with human skin and the concentration value of bis(2-ethylhexyl) phthalate does not exceed:

(a) 30 % by weight of the rubber for .

(I) gasket coatings; .

(II) solid-rubber gaskets; or .

(III) rubber components included in assemblies of at least three components using electrical, mechanical or hydraulic energy to do work, and attached to the engine. .

(b) 10 % by weight of the rubber for rubber-containing components not referred to in point (a).

Applies to category 11 and expires on 21 July 2024.

For the purposes of this entry, 'prolonged contact with human skin' means continuous contact of more than 10 minutes duration or intermittent contact over a period of 30 minutes, per day.

44- Lead in solder of sensors, actuators, and engine control units of combustion engines within the scope of Regulation (EU) 2016/1628 of the European Parliament and of the Council⁸, installed in equipment used at fixed positions while in operation which is designed for professionals, but also used by non-professional users.

Applies to category 11 and expires on 21 July 2024.

45 - Lead diazide, lead styphnate, lead dipicramate, orange lead (lead tetroxide), lead dioxide in electric and electronic initiators of explosives for civil (professional) use and barium chromate in long time pyrotechnic delay charges of electric initiators of explosives for civil (professional) use.

Applies to category 11 and expires on 20 April 2026.

⁸ Regulation (EU) 2016/1628 on requirements relating to gaseous and particulate pollutant emission limits.

Appendix 3 – Chromium (VI) SVHC compounds

Name	CAS RN
Ammonium dichromate	7789-09-05*
Potassium chromate	7789-00-6*
Potassium dichromate	7778-50-9*
Sodium chromate	7775-11-03*
Sodium dichromate dehydrate	7789-12-0, 10588-01-9*
Strontium chromate	7789-06-2*
Chromium trioxide	1333-82-0*
Chromic acid	7738-94-5*
Dichromic acid	13530-68-2*
Lead chromate	7758-97-6*
Lead sulfochromate	1344-37-2*
Lead chromate molybdate sulphate	12656-85-8*
Dichromium tris(chromate)	24613-89-6*
Potassium hydroxyoctaoxodizincatedichromate	11103-86-9*
Pentazine chromate octahydroxide	49663-84-5*

* SVHC listed in both Annex XIV and in the candidate list. Note substances on the Candidate list (SVHC) are also included in the French AGECE legislation (LOI n° 2020-105)

Appendix 4 – SVHC Lead and lead compounds

Name	CAS RN
Lead chromate	7758-97-6
Lead sulfochromate	1344-37-2
Lead chromate molybdate sulphate	12656-85-8
Lead dipicrate	6477-64-1
Lead styphnate	15245-44-0
Lead diazide	13424-46-9
Lead hydrogen arsenate	7784-40-9
Lead monoxide (Lead oxide)	1317-36-8
Orange lead (Lead tetroxide)	1314-41-6
Lead bis(tetrafluoroborate)	13814-96-5
Trilead bis(carbonate)dihydroxide	1319-46-6
Lead titanium trioxide	12060-00-3
Lead titanium zirconium oxide	12626-81-2
Silicic acid, lead salt	11120-22-2
Silicic acid (H ₂ Si ₂ O ₅), barium salt (1:1), lead-doped	68784-75-8
Acetic acid, lead salt, basic	51404-69-4
Lead oxide sulfate	12036-76-9
[Phthalato(2-)]dioxotrilead	69011-06-9
Dioxobis(stearato)trilead	12578-12-0
Fatty acids, C16-18, lead salts	91031-62-8
Lead cyanamidate	20837-86-9
Lead dinitrate	10099-74-8
Pentalead tetraoxide sulphate	12065-90-6
Pyrochlore, antimony lead yellow	8012-00-8
Sulfurous acid, lead salt, dibasic	62229-08-7
Tetraethyllead	78-00-2
Tetralead trioxide sulphate	12202-17-4
Trilead dioxide phosphonate	12141-20-7
Lead di(acetate)	301-04-2
Lead	7439-92-1

Note substances on the Candidate list (SVHC) are also included in the French AGECL legislation (LOI n° 2020-105)

Appendix 5 – greenhouse gases

Appendix 8 - Phthalate esters

Substances listed in Annex XIV, Annex XVII, the Candidate List of Substances of Very High Concern for authorization of Regulation (EC) No 1907/2006 (REACH) and/or the French AGECE legislation (LOI n° 2020-105).

Name	CAS RN	RoHS	Candidate list	Annex XIV	Annex XVII	AGEC
Bis (2-ethylhexyl) phthalate) (DEHP)	117-81-7	x*	x	x	x (entry 51) **	x
Dibutyl phthalate (DBP)	84-74-2	x*	x	x	x (entry 51) **	x
Benzyl butyl phthalate (BBP)	85-68-7	x*	x	x	x (entry 51) **	x
Diisobutyl phthalate (DIBP)	84-69-5	x*	x	x	x (entry 51) **	x
Di-isononyl phthalate (DINP)	28553-12-0 68515-48-0				x (entry 52) ***	
Di-isodecyl phthalate (DIDP)	26761-40-0 68515-49-1				x (entry 52) ***	
Di-n-octyl phthalate (DNOP)	117-84-0				x (entry 52) ***	
1,2-benzenedicarboxylic acid, di-C6-8-branched alkylesters, C7-rich	71888-89-6		x	x	x (entry 72) ****	x
Di-n-pentyl phthalate (DPP)	131-18-0		x	x	x (entry 72) ****	x
Di-n-hexyl phthalate (DnHP)	84-75-3		x	x	x (entry 72) ****	x
Diisopentyl phthalate	605-50-5		x	x	x (entry 72) ****	x
Bis (2-methoxyethyl) phthalate	117-82-8		x	x	x (entry 72) ****	x
1,2-Benzenedicarboxylic acid, dipentylester, branched and linear	84777-06-0		x	x		x
n-pentyl-isopentyl phthalate	776297-69-9		x	x		x
1,2-Benzenedicarboxylic acid, di-C7-11-branched and linear alkyl esters	68515-42-4		x	x		x
1,2-Benzenedicarboxylic acid, dihexyl ester, branched and linear	68515-50-4		x	x		x
1,2-Benzenedicarboxylic acid, mixed decyl and hexyl and octyl diesters, with $\geq 0.3\%$ of dihexyl phthalate (CAS 84-75-3)	68648-93-1		x	x		x
1,2-Benzenedicarboxylic acid, di-C6-10-alkyl esters, with $\geq 0.3\%$ of dihexyl phthalate (CAS 84-75-3)	68515-51-5		x	x		x
Dicyclohexyl phthalate (DCHP)	84-61-7		x			x
Diisohexyl phthalate	71850-09-4		x			x
Diisooctyl phthalate (DIOP)	27554-26-3					x

* restricted in homogenous material 1000 mg/kg

** shall not be used in toys and childcare plasticised articles (not under RoHS), individually or in any combinations in concentration equal to or greater than 0.1% by weight

*** shall not be used in toys and childcare plasticised articles which can be placed in the mouth by children, individually or in any combinations in concentration greater than 0.1% by weight

**** DIHP, DMEP, DIPP, DPP and DnHP have a restriction limit of 1000 mg/kg in clothing, related accessories, textiles other than clothing in skin contact, or footwear (entry 72) according to Annex XVII of Regulation (EC) No 1907/2006 (REACH). This limit applies to each substance individually or in combination with other phthalates that are classified as CMR substances. The restriction does not apply to clothing, related accessories, textiles other than clothing, or footwear within the scope of Regulation (EU) 2016/425 (PPE)

Packaging made of cardboard, paper plastics and rubber

	NN limit	EU Legal limits (mg/kg)
All packaging materials		
Packaging material shall not include Mercury (Hg), Lead (Pb), Chromium VI (CrVI) and Cadmium (Cd)		100 for sum of Hg, Pb, CrVI and Cd (packaging dir. ¹)
Plastics and rubber (including coatings)		
<input type="checkbox"/> PVC		
• Cadmium (especially red, yellow plastics)		100 for sum of Hg, Pb, CrVI and Cd, (packaging dir. ¹)
• Lead		100 for sum of Hg, Pb, CrVI and Cd, (packaging dir. ¹)
• Bisphenols		1000 (candidate list)
• Organostannic compounds (DOT, DBT, DOTE etc.)		1000 (candidate list)
• UV-stabilizers (UV-320, UV- 327, UV-328, UV-350)		1000 (candidate list)
• Phthalate esters (plasticized PVC)		1000 for sum ²
• Short-chain and Middle-chain chloroparaffins (SCCP and MCCP in plasticized PVC)		1000 (candidate list) 1500 (POP ³)
• Arylamines (from Azocolorants)		1000 (candidate list)
• CMR dyestuffs		1000 (candidate list)
• ADCA (foamed PVC)		1000 (candidate list)
• NMP, DMFa, DMAc, FA (coatings)		1000 (candidate list)
<input type="checkbox"/> PU		
• NMP, DMFa, DMAc		1000 (candidate list)
• Organostannic compounds (DOT, DBT, DOTE etc.)		1000 (candidate list)
• UV-stabilizers (UV-320, UV- 327, UV-328, UV-350)		1000 (candidate list)
• Mercury and its compounds		100 phenylmercury ⁴
• Formamide (foamed PU)		1000 (candidate list)
• Hydrazine (foamed PU)		1000 (candidate list)
• ADCA (foamed PU)		1000 (candidate list)
<input type="checkbox"/> Foamed EVA, PE, PP		
• Formamide		1000 (candidate list)
• Hydrazine		1000 (candidate list)
• ADCA		1000 (candidate list)
<input type="checkbox"/> PC and epoxy		
• Bisphenols		1000 (candidate list)
<input type="checkbox"/> Rubber		
• PAH (Polycyclic aromatic hydrocarbons)		1 per each PAH ² 1000 (candidate list)
• Ethylenethiourea		1000 (candidate list)
• Short-chain and Middle-chain chloroparaffins (SCCP and MCCP)		1000 (candidate list) 1500 SCCP (POP ³)
• UV stabilizers (DBMC, UV-320, UV- 327, UV-328, UV-350)		1000 (candidate list)
• Quinoline		No legal limit for rubber

<input type="checkbox"/> Silicone (e.g. rubber band)		
• Siloxanes (D4, D5, D6)		1000 (candidate list)
<input type="checkbox"/> Expanded polystyrene (EPS)		
• HBCDD (especially PS, HIPS, EPS, XPS)		Banned (POP ³)
• CFC and HCFC (ozone depleting gases)		Banned (Montreal protocol)
Cellulose-based		
<input type="checkbox"/> Cardboard and paper		
• Fungicides (PCP, TeCP - isomers)		5 (POP ³)
• Boric substances		1000 (candidate list)
• Formaldehyde		No limit
• DMFa, DMAC		1000 (candidate list)
• PFOA, related substances and higher homologues		0.025 (POP ³) 1000 (candidate list)
• PFOS and related substances		1µg/m ² (POP ³) 1000 (POP ³) 1000 (candidate list)
• Mercury and its compounds		100 phenylmercury ⁴

¹ EU directive on packaging and packaging waste (94/62/EC).

² Restricted in Annex VII of the REACH regulation (EC 1907/2006).

³ Restricted in the POPs regulation (EU 1021/2019).

⁴ 10 mg/kg in articles (Norway). 100 mg/kg in part of articles (Denmark).

Chemical Guide - Restricted Substance List Supplier commitment

APPENDIX IV – Forbidden/Regulated substances Tender Business

It is required that suppliers do not to use any of the substances mentioned below for any article produced for Hultafors Group. In case any of the mentioned chemicals are needed and not possible to be substituted the supplier shall notify Hultafors Group and ask for permission to use the chemical before production start.

CAS nr	Substance
6250-23-3	C.I. Disperse Yellow 23
2437-29-8	C.I. Basic Green 4 (oxalate)
569-64-2	C.I. Basic Green (chloride)
375-85-9	PFHpA (Perfluoroheptanoic)

When producing leather ware for Hultafors Group the maximum chemical content must not exceed the below stated limits. In case any of these limits are not possible to meet Hultafors Group shall be notified immediately and supplier shall await feedback for how to proceed.

Substance	Maximum limit for leather ware (NOTE items intended for children not included)
Antimon (Sb)	30 mg/kg
Arsenik (As)	1,0 mg/kg
Bly (Pb)	1,0 mg/kg
Cadmium (Cd)	0,1 mg/kg
Krom (Cr)	200 mg/kg
Krom VI (Cr69)	3 mg/kg
Kobalt (Co)	4 mg/kg
Koppar (Cu)	50 mg/kg
Nickel (Ni)	4 mg/kg
Kvicksilver (Hg)	0,02 mg/kg

APPENDIX V – Approved laboratories

When testing any material for Hultafors Group AB it is the supplier's responsibility to make sure that the laboratory is accredited for the test to be performed. A laboratory must be approved by Hultafors Group and must have international standard.

Below is a list of accredited laboratories approved by Hultafors Group, browse to find a local office – if a supplier requires to use any other laboratory than what is stated on below list a written approval must be given by person in charge at Hultafors Group.
